Uncertainty and Imprecision in Decision Making and Decision Support: Cross-Fertilization, New Models and Applications Krassimir T. Atanasov, Janusz Kacprzyk, Andrzej Kałusko, Maciej Krawczak, Jan Owsinski, Sotir Sotirov, Evdokia Sotirova, Eulalia Szmidt, Sławomir Zadrozny, 2017-10-06 This

book presents selected papers from two important conferences held on October 12-14, 2016 in Warsaw, Poland: the Fourteenth National Conference of Operational and Systems Research BOS 2016, one of the premiere conferences in the field of operational and systems research not only in Poland but also at the European level, and the Fifteenth International Workshop on Intuitionistic Fuzzy Sets and General Nets IWIFSGN 2016, one of the foremost conferences on fuzzy logic notably addressing extensions of the traditional fuzzy sets as well as the Generalized Nets GNs, a powerful extension of the traditional Petri net paradigm. The scope of the BOS conferences includes all types of problems related to systems modeling, systems analysis, broadly perceived operational research, optimization, decision making, and decision support, to name but a few. In all these areas, virtually all models used have to take into account not only uncertainty in its traditional sense but also imprecision of information. That is, in addition to traditional probabilistic and statistical tools and techniques, the use of methods based on fuzzy sets can also be sensible. Even more so, employing certain extensions of the classic concept of a fuzzy set can be very useful. Applying intuitionistic fuzzy sets, which are at the core of the IWIFSGN conferences, is a good example. Both conferences BOS 2016 and IWIFSGN 2016 offered ideal venues for the exchange of ideas, cross-fertilization, and mutual inspiration.

Real-Time Multi-Chip Neural Network for Cognitive Systems Amir Zjajo, Rene van Leuken, 2022-09-01. Simulation of brain neurons in real time using biophysically meaningful models is a pre-requisite for comprehensive understanding of how neurons process information and communicate with each other in effect, efficiently complementing in vivo experiments. In spiking neural networks (SNNs), propagated information is not just encoded by the firing rate of each neuron in the network as in artificial neural networks (ANNs) but in addition by amplitude spike train patterns and the transfer rate. The high level of realism of SNNs and more significant computational and analytic capabilities in comparison with ANNs, however, limit the size of the realized networks. Consequently, the main challenge in building complex and biophysically accurate SNNs is largely posed by the high computational and data transfer demands. Real-Time Multi-Chip Neural Network for Cognitive Systems presents novel real-time reconfigurable multi-chip SNN system architecture based on localized communication, which effectively reduces the communication cost to a linear growth. The system uses double floating-point arithmetic for the most biologically accurate cell behavior simulation and is flexible enough to offer an easy implementation of various neuron network topologies, cell communication schemes, as well as models and kinds of cells. The system offers a high run-time configurability which reduces the need for resynthesizing the system. In addition, the simulator features configurable on- and off-chip communication latencies as well as neuron calculation latencies. All parts of the system are generated automatically based on the neuron interconnection scheme in use. The simulator allows exploration of different system configurations, e.g., the interconnection scheme between the neurons, the intracellular concentration of different chemical compounds/ions, which affect how action potentials are initiated and propagate.
