

## Note

- The arrows in the following illustrations show the refrigerant flow direction during flushing. Refrigerant flow is opposite in direction of flow when A/C system is in operation after flushing. Therefore, the high-pressure side of the A/C Service Station is connected to the low-pressure connection of the refrigerant circuit in the A/C compressor.
- The block diagram shows a refrigerant circuit with expansion valve, evaporator and second evaporator (optional equipment on certain vehicles).
- On vehicles with an expansion valve and microswitches, the expansion valve is removed and replaced by an adapter. On parking in the vehicle, the microswitches must also be removed and the connections to flush reservoir be connected to each other by two adapters and a charge hose.
- On a vehicle with only one evaporator, components from dash "H" are not present or are not needed.
- Depending on the construction of the A/C Service Station, check valves may be installed between the refrigerant circuit and the A/C Service Station (to guarantee the correct direction of refrigerant flow during flushing).
- The adapter from the Vithkuhl - Passenger Vehicle Adapter Set are provided with 50" - 10" LMP threads and additional adapters from the Vithkuhl - Passenger Vehicle Adapter Set are so that the R134a/Filling A/C Service Station filling hose can be attached. Refer to the Parts Catalog.
- On vehicles with a high-voltage system, non-operated valves are installed in the refrigerant circuit, which must be removed to them (flush) and replaced with flush adapter valves or adapters. Refer to "Insulating, Ventilation and Air Conditioning Rep. Ch. 27, Refrigerant Circuit".

## 1 - A/C Service Station

- With electronics and a flushing program, A/C Service Station with flushing device. Refer to the Parts Catalog (Tools, Special Tools and Equipment, A/C and Heating).
- If an A/C Service Station without a flushing program is used, the procedure must be performed manually (evacuate, flush four times with at least 3 kg refrigerant for each and extract the refrigerant again, evacuate).

## 2 - Refrigerant Hoses for A/C Service Station

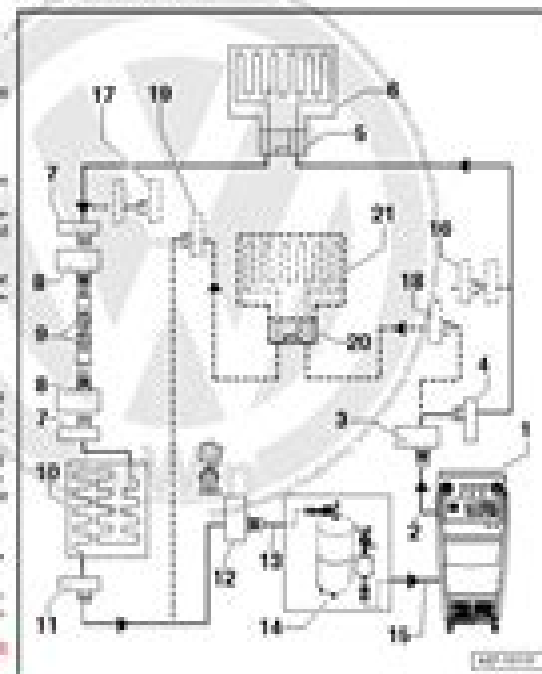

- From the high-pressure side of the A/C Service Station (directly not connected to the low-pressure side connection of the A/C compressor on refrigerant circuit (large diameter)).

## 3 - Adapter to Connection for Low-Pressure Side on Refrigerant Circuit

- There are different versions depending on vehicle. Refer to [2.7.1.1.1 Adapter for Air Conditioning Equipment CC 2012, page 101](#).
- Use the Refrigerant Circuit Adapter Set - Adapter 48 - VAS80330/48 between the refrigerant hose 2b and the adapter 3b.
- From the Vithkuhl - Passenger Vehicle Adapter Set.
- Depending on the version of the adapter an additional adapter is necessary to connect the A/C Service Station filling hose.

## Note

- The A/C Service Station filler hose has a 1/2" x 1/2" external thread according to SAE J201 on the adapter to the connection for the low-pressure side on 50" - 10" LMP external thread. An additional adapter is necessary so that both components can be connected. Refer to the Parts Catalog (Tools, Special Tools and Equipment, A/C and Heating).
