25.2 Notes on performing repair work

Batteries must be disconnected before repair work is begun =
Electrical system; Repair Group 27; Starter, current supply; Battery;
Disconnecting and reconnecting batteries

Use valid current flow diagram = Current flow diagrams, Electrical
fault finding and fitting locations

For removing and installing trim = General body repairs, interior
or = General body repairs, exterior

Observe manufacturer's operating and installation instructions for
mobile telephones, two-way radios and aerials.

Secure wiring harnesses with cable ties. Wrap connectors with
foam tubes to avoid rattling noises.

25.2.1 Transmitting power and possible fitting locations

Volkswagen permits the installation and operation of radio units
if the transmitted power at the aerial base listed in the table is not
exceeded. Prescribed aerial fitting locations can also be found in
the table.

The limits according to VDE 0848 part 2 (maximum permitted ra-
diation strength for human safety) must be adhered to, if neces-
sary, by reducing the transmitting power.

25.2.2 Voltage supply

When a transmitter/receiver unit is retrofitted in the vehicle, the
battery is used for connecting the positive and negative wires.

In addition, the wiring harness must be manufactured:

- Positive voltage supply via a red wire with 2.5 mm² cross sec-
tion.
- Negative voltage supply via a brown wire with 2.5 mm² cross
section.

The positive wire must have a fuse located in the immediate vi-
cinity of the battery. For this purpose, a fuse holder must be
secured next to the battery. Both wires must be enclosed in an
insulating tube.

Appropriate connections must be attached to wires on the battery
side.

Proceed according to unit's operating instructions on side of unit.

The additional wiring must be routed separately from vehicle wir-
ing, and a distance of at least 10 cm must be maintained.

Golf Plus Service Manual
