Grid Computing A Research Monograph:

Grid Computing, 2005 The book traces the evolution and progress of models of computation from clusters to grid computing The interesting journey of evolution of these models of computation in the past ten years at the Distributed and Object Systems Lab at IIT Madras reflects **Grid Computing Models** D. Janakiram, 2005 The book traces the evolution and progress of models of computation from clusters to grid computing The book includes among several other topics Anonymous Remote Computing ARC A programming model that provides a platform to enable sequential and parallel loads to coexist in a cluster environment **Handbook of Research in Mobile Business, Second Edition: Technical, Methodological and Social Perspectives** Unhelkar, Bhuvan, 2008-12-31 This book collects the latest research advances in the rapidly evolving field of mobile business Provided by publisher **Grid Computing** Radu Prodan, Thomas Fahringer, 2007-04-26 This monograph addresses four critical software development aspects for the engineering and execution of applications on parallel and Grid architectures A new directive based language called ZEN is proposed for compact specification of wide value ranges of interest for arbitrary application parameters The monograph contributes to various research areas related to integrated tool development for efficient engineering and high performance execution of scientific applications in Grid environments *Grid Computing - GRID 2002* Manish Parashar, 2003-07-01 The growth of the Internet and the availability of powerful computers and hi speed networks as low cost commodity components are changing the way we do computing These new technologies have enabled the clustering of a wide variety of geographically distributed resources such as supercomputers storage systems data sources and special devices and services which can then be used as a unified resource Furthermore they have enabled seamless access to and interaction among these distributed resources services applications and data The new paradigm that has evolved is popularly termed Grid computing Grid computing and the utilization of the global Grid infrastructure have presented significant challenges at all levels including application development programming models systems infrastructures and services networking and security and have led to the development of a global research community Grid 2002 is the third in a series of workshops developed to provide a forum for this growing Grid Computing research community Grid 2000 the first workshop in the series was chaired by Rajkumar Buyya and Mark Baker and was held in conjunction with HiPC 2002 in Bangalore India Grid 2001 Chair Craig A Lee and Grid 2002 were held in conjunction with Supercomputing the world's premier meeting for high performance computing **Algorithms and Architectures for Parallel Processing** Sang-Soo Yeo, Jong Hyuk Park, Laurence Tianruo Yang, Ching-Hsien Hsu, 2010-05-29 It is our great pleasure to present the proceedings of the symposia and workshops on parallel and distributed computing and applications associated with the ICA3PP 2010 conference These symposia and workshops provide vibrant opportunities for researchers and industry practitioners to share their research experience original research results and practical development experiences in the new challenging research areas of parallel and distributed computing technologies and applications It was

the first time that the ICA3PP conference series added symposia and workshops to its program in order to provide a wide range of topics that extend beyond the main conferences. The goal was to provide a better coverage of emerging research areas and also forums for focused and stimulating discussions. With this objective in mind we selected three workshops to accompany the ICA3PP 2010 conference: FPDC 2010 the 2010 International Symposium on Frontiers of Parallel and Distributed Computing, HPCTA 2010 the 2010 International Workshop on High Performance Computing Technologies and Applications, M2A 2010 the 2010 International Workshop on Multicore and Multithreaded Architectures and Algorithms. Each of the symposia/workshops focused on a particular theme and complemented the spectrum of the main conference. All papers published in the workshops proceedings were selected by the Program Committee on the basis of referee reports. Each paper was reviewed by independent referees who judged the papers for originality, quality, contribution, presentation, and consistency with the theme of the workshops.

Technologies and Protocols for the Future of Internet Design: Reinventing the Web Prakash Vidyarthi, Deo, 2012-02-29. The Internet has changed significantly from its beginnings as a simple network used to pass data from one computer to another. Containing essential tools for everyday information processing, the Internet is used by small and large organizations alike and continues to evolve with the changing information technology landscape. *Technologies and Protocols for the Future of Internet Design: Reinventing the Web* aims to provide relevant methods and theories in the area of the Internet design. It is written for the research community and professionals who wish to improve their understanding of future Internet technologies and gain knowledge of new tools and techniques in future Internet design.

Grid Computing: The New Frontier of High Performance Computing Lucio Grandinetti, 2005-11-15. The book deals with the most recent technology of distributed computing. As the Internet continues to grow and provide practical connectivity between users of computers, it has become possible to consider use of computing resources which are far apart and connected by Wide Area Networks. Instead of using only local computing power, it has become practical to access computing resources widely distributed. In some cases between different countries, in other cases between different continents. This idea of using computer power is similar to the well-known electric power utility technology. Hence the name of this distributed computing technology is the Grid Computing. Initially, grid computing was used by technologically advanced scientific users. They used grid computing to experiment with large-scale problems which required high-performance computing facilities and collaborative work. In the next stage of development, the grid computing technology has become effective and economically attractive for large and medium-size commercial companies. It is expected that eventually the grid computing style of providing computing power will become universal, reaching every user in industry and business. Written by academic and industrial experts who have developed or used grid computing, many proposed solutions have been tested in real-life applications. Covers most essential and technically relevant issues in grid computing.

Ant Colony Optimization Algorithm for Load Balancing in Grid Computing (UUM Press) Ku Ruhana Ku Mahamud, Aniza

Mohamed Din,2012-01-01 Managing resources in grid computing system is complicated due to the distributed and heterogeneous nature of the resources This research proposes an enhancement of the ant colony optimization algorithm that caters for dynamic scheduling and load balancing in the grid computing system The proposed algorithm is known as the enhance Ant Colony Optimization EACO The algorithm consists of three new mechanisms that organize the work of an ant colony i e initial pheromone value mechanism resource selection mechanism and pheromone update mechanism The resource allocation problem is modelled as a graph that can be used by the ant to deliver its pheromone This graph consists of four types of vertices which are job requirement resource and capacity that are used in constructing the grid resource management element The proposed EACO algorithm takes into consideration the capacity of resources and the characteristics of jobs in determining the best resource to process a job EACO selects the resources based on the pheromone value on each resource which is recorded in a matrix form The initial pheromone value of each resource for each job is calculated based on the estimated transmission time and execution time of a given job Resources with high pheromone value are selected to process the submitted jobs Global pheromone update is performed after the completion of processing the jobs in order to reduce the pheromone value of resources A simulation environment was developed using Java programming to test the performance of the proposed EACO algorithm against other ant based algorithm in terms of resource utilization Experimental results show that EACO produced better grid resource management solution

Grid Computing

Fran Berman,Geoffrey Fox,Anthony J. G. Hey,2003-04-18 Grid computing is applying the resources of many computers in a network to a single problem at the same time Grid computing appears to be a promising trend for three reasons 1 Its ability to make more cost effective use of a given amount of computer resources 2 As a way to solve problems that can t be approached without an enormous amount of computing power 3 Because it suggests that the resources of many computers can be cooperatively and perhaps synergistically harnessed and managed as a collaboration toward a common objective A number of corporations professional groups university consortiums and other groups have developed or are developing frameworks and software for managing grid computing projects The European Community EU is sponsoring a project for a grid for high energy physics earth observation and biology applications In the United States the National Technology Grid is prototyping a computational grid for infrastructure and an access grid for people Sun Microsystems offers Grid Engine software Described as a distributed resource management tool Grid Engine allows engineers at companies like Sony and Synopsys to pool the computer cycles on up to 80 workstations at a time the Grid is a very hot topic generating broad interest from research and industry e g IBM Platform Avaki Entropia Sun HP Grid architecture enables very popular e Science projects like the Genome project which demand global interaction and networking In recent surveys over 50% of Chief Information Officers are expected to use Grid technology this year Grid Computing Features contributions from the major players in the field Covers all aspects of grid technology from motivation to applications Provides an extensive state of the art
