Periodic motion around a central point of equilibrium where there is no net force. There is a restoring force that acts on the object that is linearly proportional to the displacement from the equilibrium position and acts in a direction opposite to that displacement.

Spring

Equilibrium Position

Δx = Displacement of spring from natural length. Always points away from spring's natural length position.

F_s = Force applied by spring on object. Always points towards spring's natural length position.

F_s is the restoring force in a spring's simple harmonic motion.
