R. Rodrigues, 2013-05-22 This book is very useful for it is not just descriptive in its nature but prescriptive too It is descriptive in the sense that it describes the process of developing or using a metric in a problem situation and prescriptive as it clearly prescribes how a beginner can put the theory into practice In this globalized economy

maintaining quality of products and services has been the thrust area of interest among academicians and practitioners. Today there are quite a good number of books and research articles available. Nevertheless service quality measurement has always posed problems particularly in the context of service industries due to the difficulty in the measurement of the intangibles and implied needs of the customers. The research literature is filled with articles on how to quantify the services and there are several streams of arguments on the choice of the most ideal approach. However the research gap lies in the answer to the question: Do these measurement instruments concur in their measurement outcomes or do they give different results in the same situation? This book primarily makes an attempt to answer this question through a case study approach. Even though there are several instruments for the measurement of service quality the two most widely used instruments are SERVQUAL and SERVPERF metrics. Comprehensively this book explains the systematic procedure of using both the instruments in a service sector and further the procedure for conducting a statistical analysis so that one will be able to apply the same in any service sector. It then takes the reader through a series of tests in order to compare the two metrics and to prove statistically if there is the same outcome in a problem situation. The results are sure to surprise the reader and trigger the research bent of mind to undertake a similar study of such metrics and gain mastery over performing an independent research with very minimal guidance from a professional guide.

*Preach the Word* Myles MacBean, 2019-11-11. How should we help equip the church leaders of Africa today? There remains a well documented lack of theologically sound Bible centric preaching in Sub Saharan Africa. The majority of sermons are preached by untrained or undertrained church leaders. Following a practical theology praxis this book develops a conceptual framework for the evaluation of existing alternative approaches to grassroots preacher training. It also proposes broad principles for effective preacher training and offers a practical solution. The 20th century had seen the Christian church in Africa grow 36 fold to 360 million. This amazing growth is arguably the largest religious change in human history in such a short period. It has shifted the focus of Christianity from North to South. This rapid growth is debatably considered by some missiologists and theologians to have resulted in an African church a mile wide and an inch deep. That is a church of great size but lacking in spiritual depth. The rapid growth has led to insufficient numbers of trained leaders being available to oversee their congregations. Most leaders are unpaid. Untrained or undertrained leaders have an inadequate knowledge of scripture and lack understanding of its interpretation. They also lack the skills they need to communicate its truths. Even so they preach up to 90% of the sermons in rural Africa. Despite a tremendous hunger for training among many of those preachers traditional college based theological education cannot keep up with the demand for trained pastors and preachers in an affordable or culturally appropriate manner.

language English abstract When we carry out surveys we can not include everyone who belongs to the research group That is why we select a portion of the group and assume this portion applies equally to others of the group Mainly two groups of research techniques are used in the social research namely probability sampling and non probability sampling To the group of probability sampling belongs random sampling systematic sampling stratified sampling quota sampling cluster sampling and multi stage sampling They rely on the idea that the researcher has some notion the chosen sample represents the whole of the selection Included in the group of non probability sampling are purpose sampling snowball sampling theoretical sampling and convenience sampling basically it means we do not have enough information for the samples to represent a particular portion
