

# CONGRUENT TRIANGLES - Study Guide

If two triangles are congruent, then all of their corresponding sides and all of their corresponding angles are congruent.

Example:  $\triangle ABC \cong \triangle DEF$   
 $\angle A \cong \angle D$   
 $\angle B \cong \angle E$   
 $\angle C \cong \angle F$   
 $AB \cong DE$   
 $BC \cong EF$   
 $AC \cong DF$

How to prove two triangles congruent:

Side-Side-Side (SSS)

Three sides of one triangle are congruent to three sides of another triangle, then the two triangles are congruent.

Example:  $\triangle ABC \cong \triangle DEF$   
 $AB \cong DE$   
 $BC \cong EF$   
 $AC \cong DF$   
 $\triangle ABC \cong \triangle DEF$  (SSS)

Side-Angle-Side (SAS)

Two sides and the included angle of one triangle are congruent to two sides and the included angle of another triangle, then the two triangles are congruent.

Example:  $\triangle ABC \cong \triangle DEF$   
 $AB \cong DE$   
 $\angle B \cong \angle E$   
 $BC \cong EF$   
 $\triangle ABC \cong \triangle DEF$  (SAS)

Angle-Side-Angle (ASA)

Two angles and the included side of one triangle are congruent to two angles and the included side of another triangle, then the two triangles are congruent.

Example:  $\triangle ABC \cong \triangle DEF$   
 $\angle A \cong \angle D$   
 $AB \cong DE$   
 $\angle B \cong \angle E$   
 $\triangle ABC \cong \triangle DEF$  (ASA)

Robert W. Li, 2021-09-08 Numerous pathogens affect animal health and wellbeing and production efficiency These pathogens also have a considerable impact on social economics food safety and security and human health Infectious diseases that originate from both domesticated animals and wildlife represent one of the greatest threats to human health Recent studies show that domesticated species harbor approximately 84 times more zoonotic viruses than wild species Eight of the top 10 mammalian species with the highest number of zoonotic viruses are domestic such as pigs cattle and horses Many animal parasites are also zoonotic constituting an additional burden on human health Furthermore the rapid emergence and spread of drug resistant pathogen strains pose new threats to animal and human health Climate changes will undoubtedly alter the interactions between animals and between animals and humans which will have a huge impact on the transmission rate of existing pathogens and the emergence of new pathogens or the reemergence of old pathogens In this special collection interactions of all major pathogen types including viruses bacteria mites and flies protozoans and helminths and their hosts such as wild and companion animals and livestock species are discussed Further anthelmintic activities of natural products are evaluated The relevance and utility of cutting edge tools such as immunology genomics and genetics microbiome studies and metabolomics and molecular epidemiology in dissecting host pathogen interactions are also discussed This special collection provides a broad knowledge base that encourages dialogue across a wide distribution of the research community in veterinary microbiology and parasitology

Fractal and Multifractal Facets in the Structure and Dynamics of Physiological Systems and Applications to Homeostatic Control, Disease Diagnosis and Integrated Cyber-Physical Platforms Paul Bogdan, Plamen Ch. Ivanov, Andras Eke, 2020-06-25 Widespread chronic diseases e g heart diseases diabetes and its complications stroke cancer brain diseases constitute a significant cause of rising healthcare costs and pose a significant burden on quality of life for many individuals Despite the increased need for smart healthcare sensing systems that monitor measure patients body balance there is no coherent theory that facilitates the modeling of human physiological processes and the design and optimization of future healthcare cyber physical systems HCPS The HCPS are expected to mine the patient s physiological state based on available continuous sensing quantify risk indices corresponding to the onset of abnormality signal the need for critical medical intervention in real time by communicating patient s medical information via a network from individual to hospital and most importantly control actuate vital health signals e g cardiac pacing insulin level blood pressure within personalized homeostasis To prevent health complications maintain good health and or avoid fatal conditions calls for a cross disciplinary approach to HCPS design where recent statistical physics inspired discoveries done by collaborations between physicists and physicians are shared and enriched by applied mathematicians control theorists and bioengineers This critical and urgent multi disciplinary approach has to unify the current state of knowledge and address the following fundamental challenges One fundamental challenge is represented by the need to mine and understand the complexity of the structure and dynamics of the physiological systems in healthy homeostasis and associated with a disease

such as diabetes Along the same lines we need rigorous mathematical techniques for identifying the interactions between integrated physiologic systems and understanding their role within the overall networking architecture of healthy dynamics Another fundamental challenge calls for a deeper understanding of stochastic feedback and variability in biological systems and physiological processes in particular and for deciphering their implications not only on how to mathematically characterize homeostasis but also on defining new control strategies that are accounting for intra and inter patient specificity a truly mathematical approach to personalized medicine Numerous recent studies have demonstrated that heart rate variability blood glucose neural signals and other interdependent physiological processes demonstrate fractal and non stationary characteristics Exploiting statistical physics concepts numerous recent research studies demonstrated that healthy human physiological processes exhibit complex critical phenomena with deep implications for how homeostasis should be defined and how control strategies should be developed when prolonged abnormal deviations are observed In addition several efforts have tried to connect these fractal characteristics with new optimal control strategies that implemented in medical devices such as pacemakers and artificial pancreas could improve the efficiency of medical therapies and the quality of life of patients but neglecting the overall networking architecture of human physiology Consequently rigorously analyzing the complexity and dynamics of physiological processes e g blood glucose and its associated implications and interdependencies with other physiological processes represents a fundamental step towards providing a quantifiable mathematical definition of homeostasis in the context of critical phenomena understanding the onset of chronic diseases predicting deviations from healthy homeostasis and developing new more efficient medical therapies that carefully account for the physiological complexity intra and inter patient variability rather than ignoring it This Research Topic aims to open a synergetic and timely effort between physicians physicists applied mathematicians signal processing bioengineering and biomedical experts to organize the state of knowledge in mining the complexity of physiological systems and their implications for constructing more accurate mathematical models and designing QoL aware control strategies implemented in the new generation of HCPS devices By bringing together multi disciplinary researchers seeking to understand the many aspects of human physiology and its complexity we aim at enabling a paradigm shift in designing future medical devices that translates mathematical characteristics in predictable mathematical models quantifying not only the degree of homeostasis but also providing fundamentally new control strategies within the personalized medicine era
