*The Origins of Homo Sapiens* Louis Carini, 2008-08-12 The Twelve Millennial Beat of the mtDNA sequences in the control region portion of the theory in the book s title plus a tremendous environmental upheaval 180 000 years ago comprise the new theory of evolution itself However what is most unique about us Homo sapiens devolves from the Brain Asymmetry For the marked asymmetry of our brains allows for the specialization of the human brain into an originating right hemisphere and the language areas in the left hemisphere The Theory of the Origins of our Humanity is largely based on that Brain Asymmetry and upon my The theory of phenomenal psychology **Symmetry as a Developmental Principle in Nature**

**and Art** Werner Hahn, 1998 Looking beyond the boundaries of various disciplines the author demonstrates that symmetry is a fascinating phenomenon which provides endless stimulation and challenges He explains that it is possible to readapt art to the sciences and vice versa by means of an evolutionary concept of symmetry Many pictorial examples are included to enable the reader to fully understand the issues discussed Based on the artistic evidence that the author has collected he proposes

that the new ars evolutoria can function as an example for the sciences The book is divided into three distinct parts each one focusing on a special issue In Part I the phenomenon of symmetry including its discovery and meaning is reviewed The author looks closely at how Vitruvius Polyclitus Democritus Plato Aristotle Plotinus Augustine Alberti Leonardo da Vinci and Durer viewed symmetry This is followed by an explanation on how the concept of symmetry developed The author further discusses symmetry as it appears in art and science as well as in the modern age Later he expounds the view of symmetry as an evolutionary concept which can lead to a new unity of science In Part II he covers the points of contact between the form developing process in nature and art He deals with biological questions in particular evolution The collection of new and precise data on perception and knowledge with regard to the postulated reality of symmetry leads to further development of the evolutionary theory of symmetry in Part III The author traces the enormous treasure of observations made in nature and culture back to a few underlying structural principles He demonstrates symmetry as a far reaching leading structuring causal element of evolution as the idea lying behind nature and culture Numerous controllable reproducible double mirror experiments on a new stereoscopic vision verify a symmetrization theory of perception

Asymmetry, Developmental Stability and Evolution Anders Pape Møller, John P. L. Swaddle, 2023 Møller and Swaddle present the theory that symmetric animals have quantifiable and significant advantages over their asymmetric counterparts They approach this subject from an interdisciplinary perspective

**Homo Dominus** Stephen G. Dennis, 2009 Homo dominus redefines what it means to be human Starting with the component pieces of human uniqueness cognition self awareness language technology aggression altruism culture the arts and spirituality it rebuilds the human species using a new conceptual blueprint Sure to spark debate Homo dominus offers a new vision of who we are and how we got here Author Stephen Dennis draws from neuroscience paleontology psychology and sociobiology to show that the impetus of human evolution is our propensity to control events and their consequences This means simply that our root operating system is built on actions taken to bring perceptions into line with expectations A pivotal genetic shift driven by ecological instability in the late Miocene era triggered this evolutionary divergence and propelled us out of apedom From our hardscrabble origins on the forest margins to our current position of global dominance Homo dominus recasts traditional human evolutionary theory in terms of basic control theory It is a powerful organizing principle that puts our past in a new context and projects our future in a new light

Theories of Human Evolution Peter J. Bowler, 1986 The question of human origin has always been disputed by evolution theorists This book provides a comprehensive survey of the debates over human evolution from the time of Darwin to the 1940s Part 1 discusses the early controversies noting that they focused on philosophical issues rather than causes or details of the evolutionary process A framework for the debate is outlined considering evolution theory with race culture and the progress of humankind Part 2 describes various theories including the Neanderthal Phase theory the Presapiens theory the Tarsioid

theory and Polytypic theories Part 3 of the book deals with interpretations of the causes of human evolution Arguments are presented which relate to the factors of brain expansion upright posture and environment in the evolutionary process Trends in human evolution are discussed including convergence Lamarckism nonadaptive trends and orthogenesis The book ends with a review of arguments concerning Broom s 1933 question The coming of man was it accident or design An extensive listing of references is provided in a bibliography and note section TW      **How We Became Human** Pierpaolo

Antonello,Paul Gifford,2015-10-01 From his groundbreaking *Violence and the Sacred* and *Things Hidden since the Foundation of the World* Ren Girard s mimetic theory is presented as elucidating the origins of culture He posits that archaic religion or the sacred particularly in its dynamics of sacrifice and ritual is a neglected and major key to unlocking the enigma of how we became human French philosopher of science Michel Serres states that Girard s theory provides a Darwinian theory of culture because it proposes a dynamic shows an evolution and gives a universal explanation This major claim has however remained underscrutinized by scholars working on Girard s theory and it is mostly overlooked within the natural and social sciences Joining disciplinary worlds this book aims to explore this ambitious claim invoking viewpoints as diverse as evolutionary culture theory cultural anthropology archaeology cognitive psychology ethology and philosophy The contributors provide major evidence in favor of Girard s hypothesis Equally Girard s theory is presented as having the potential to become for the human and social sciences something akin to the integrating framework that present day biological science owes to Darwin something compatible with it and complementary to it in accounting for the still remarkably little understood phenomenon of human emergence      *Homo Sapiens to Homo 'X'* Lawrence Nyaguti

Ochieng.,2015-04-09 Each successive generation of mankind since archaic times has been shown to exhibit significant difference in aesthetics social behavior and physiological make up These changes are evolutionary This book is therefore a study of humans since archaic times and the changes that have since occurred in man It seeks to convince the world that from apelike *Homo habilis* *Homo erectus* and then *Homo sapiens* we are now *Homo x* By exploiting Charles Darwins organic theory of evolution and recorded historical developments social cultural and biological to date the research has proved that your child or the youth around you is most likely a higher evolved human species or different from you He or she is *Homo x* The book highlights historical climatic technological and cultural adaptation by *Homo sapiens* since the exit of *Homo erectus* which has catapulted evolutionary transformation of man within the shortest period making *Homo sapiens* the fastest of the hominids in the evolution succession to have undergone complete evolution by explaining the differences in lifespan experience of each hominid It is therefore intended to help transform our policy and legislative and cultural perspectives on nurturing our children with clear knowledge that they are indeed different from us      **Proceedings of the British**
