Turrubiates, 2014-08-05 The influence of Solomon Lefschetz 1884 1972 in geometry and topology 40 years after his death has been very profound Lefschetz's influence in Mexican mathematics has been even greater In this volume celebrating 50 years of mathematics at Cinvestav Mexico many of the fields of geometry and topology are represented by some of the leaders of their respective fields This volume opens with Michael Atiyah reminiscing about his encounters with Lefschetz and Mexico Topics covered in this volume include symplectic flexibility Chern Simons theory and the theory of classical theta functions toric topology the Beilinson conjecture for finite dimensional associative algebras partial monoids and Dold Thom functors the weak b principle orbit configuration spaces equivariant extensions of differential forms for noncompact Lie groups dynamical systems and categories and the Nahm pole boundary condition

An Introduction to Intersection Homology Theory, Second Edition Frances Kirwan, Jonathan Woolf, 2006-06-07 Now more than a quarter of a century old intersection homology theory has proven to be a powerful tool in the study of the topology of singular spaces with deep links to many other areas of mathematics including combinatorics differential equations group representations and number theory Like its predecessor *An Introduction to Intersection Homology Theory Second Edition* introduces the power and beauty of intersection homology explaining the main ideas and omitting or merely sketching the difficult proofs It treats both the basics of the subject and a wide range of applications providing lucid overviews of highly technical areas that make the subject accessible and prepare readers for more advanced work in the area This second edition contains entirely new chapters introducing the theory of Witt spaces perverse sheaves and the combinatorial intersection cohomology of fans Intersection homology is a large and growing subject that touches on many aspects of topology geometry and algebra With its clear explanations of the main ideas this book builds the confidence needed to tackle more specialist technical texts and provides a framework within which to place them

Representations of Finite Dimensional Algebras and Related Topics in Lie Theory and Geometry Vlastimil Dlab, Claus Michael Ringel, 2004 These proceedings are from the Tenth International Conference on Representations of Algebras and Related Topics ICRA X held at The Fields Institute In addition to the traditional instructional workshop preceding the conference there were also workshops on Commutative Algebra Algebraic Geometry and Representation Theory Finite Dimensional Algebras Algebraic Groups and Lie Theory and Quantum Groups and Hall Algebras These workshops reflect the latest developments and the increasing interest in areas that are closely related to the representation theory of finite dimensional associative algebras Although these workshops were organized separately their topics are strongly interrelated The workshop on Commutative Algebra Algebraic Geometry and Representation Theory surveyed various recently established connections such as those pertaining to the classification of vector bundles or Cohen Macaulay modules over Noetherian rings coherent sheaves on curves or ideals in Weyl algebras In addition methods from algebraic geometry or commutative algebra relating to quiver representations and varieties of modules were presented The workshop on Finite Dimensional

Algebras Algebraic Groups and Lie Theory surveyed developments in finite dimensional algebras and infinite dimensional Lie theory especially as the two areas interact and may have future interactions The workshop on Quantum Groups and Hall Algebras dealt with the different approaches of using the representation theory of quivers and species in order to construct quantum groups working either over finite fields or over the complex numbers In particular these proceedings contain a quite detailed outline of the use of perverse sheaves in order to obtain canonical bases The book is recommended for graduate students and researchers in algebra and geometry

Superstrings, P-branes and M-theory , Stacks and Categories in Geometry, Topology, and Algebra Tony Pantev, Carlos Simpson, Bertrand Toën, Michel Vaquié, Gabriele

Vezzosi, 2015-06-26 This volume contains the proceedings of the CATS4 Conference on Higher Categorical Structures and their Interactions with Algebraic Geometry Algebraic Topology and Algebra held from July 2 7 2012 at CIRM in Luminy France Over the past several years the CATS conference series has brought together top level researchers from around the world interested in relative and higher category theory and its applications to classical mathematical domains Included in this volume is a collection of articles covering the applications of categories and stacks to geometry topology and algebra Techniques such as localization model categories simplicial objects sheaves of categories mapping stacks dg structures hereditary categories and derived stacks are applied to give new insight on cluster algebra Lagrangians trace theories loop spaces structured surfaces stability and coherent complexes and 1-affineness showing up in geometric Langlands branching out to many related topics along the way

Progress In String Theory: Tasi 2003 Lecture Notes Juan M Maldacena, Kalyana T Mahanthappa, 2005-07-12 Intended mainly for advanced graduate students in theoretical physics this comprehensive volume covers recent advances in string theory and field theory dualities It is based on the annual lectures given at the School of the Theoretical Advanced Study Institute 2003 a traditional event that brings together graduate students in high energy physics for an intensive course given by leaders in their fields The first lecture by Paul Aspinwall is a description of branes in Calabi Yau manifolds which includes an introduction to the modern ideas of derived categories and their relation to D-branes Juan Maldacena's second lecture is a short introduction to the AdS/CFT correspondence with a short discussion on its plane wave limit Tachyon condensation for open strings is discussed in the third lecture by Ashoke Sen while Eva Silverstein provides a useful summary of the various attempts to produce four dimensional physics out of string theory and M-theory in the fourth lecture Matthew Strassler's fifth lecture is a careful discussion of a theory that has played a very important role in recent developments in string theory a quantum field theory that produces a duality cascade which also has a large N gravity description The sixth lecture by Washington Taylor explains how to perform perturbative computations using string field theory The written presentation of these lectures is detailed yet straightforward and they will be of great use to both students and experienced researchers in high energy theoretical physics

An Introduction to Lie Groups and Lie Algebras Alexander A. Kirillov, 2008-07-31 This book is an introduction to semisimple Lie algebras It is

concise and informal with numerous exercises and examples Cyclic Homology in Non-Commutative Geometry Joachim Cuntz, Georges Skandalis, Boris Tsygan, 2013-03-14 Cyclic homology was introduced in the early eighties independently by Connes and Tsygan They came from different directions Connes wanted to associate homological invariants to K homology classes and to describe the index pairing with K theory in that way while Tsygan was motivated by algebraic K theory and Lie algebra cohomology At the same time Karoubi had done work on characteristic classes that led him to study related structures without however arriving at cyclic homology properly speaking Many of the principal properties of cyclic homology were already developed in the fundamental article of Connes and in the long paper by Feigin Tsygan In the sequel cyclic homology was recognized quickly by many specialists as a new intriguing structure in homological algebra with unusual features In a first phase it was tried to treat this structure as well as possible within the traditional framework of homological algebra The cyclic homology groups were computed in many examples and new important properties such as product structures excision for H unital ideals or connections with cyclic objects and simplicial topology were established An excellent account of the state of the theory after that phase is given in the book of Loday **Lie Groups and Lie Algebras** III A.L. Onishchik, E.B. Vinberg, 1994-07-12 A comprehensive and modern account of the structure and classification of Lie groups and finite dimensional Lie algebras by internationally known specialists in the field This Encyclopaedia volume will be immensely useful to graduate students in differential geometry algebra and theoretical physics Algebraic Geometry II I.R. Shafarevich, 2013-11-22 This EMS volume consists of two parts The first part is devoted to the exposition of the cohomology theory of algebraic varieties The second part deals with algebraic surfaces The authors have taken pains to present the material rigorously and coherently The book contains numerous examples and insights on various topics This book will be immensely useful to mathematicians and graduate students working in algebraic geometry arithmetic algebraic geometry complex analysis and related fields The authors are well known experts in the field and I R Shafarevich is also known for being the author of volume 11 of the Encyclopaedia Advanced Modern Algebra Joseph J. Rotman, 2025-06-25 This new edition now in two parts has been significantly reorganized and many sections have been rewritten This first part designed for a first year of graduate algebra consists of two courses Galois theory and Module theory Topics covered in the first course are classical formulas for solutions of cubic and quartic equations classical number theory commutative algebra groups and Galois theory Topics in the second course are Zorn's lemma canonical forms inner product spaces categories and limits tensor products projective injective and flat modules multilinear algebra affine varieties and Gröbner bases Algebraic Geometry over the Complex Numbers Donu Arapura, 2012-02-15 This is a relatively fast paced graduate level introduction to complex algebraic geometry from the basics to the frontier of the subject It covers sheaf theory cohomology some Hodge theory as well as some of the more algebraic aspects of algebraic geometry The author frequently refers the reader if the treatment of a certain topic is readily available elsewhere but goes into considerable detail on topics for which his treatment

puts a twist or a more transparent viewpoint His cases of exploration and are chosen very carefully and deliberately The textbook achieves its purpose of taking new students of complex algebraic geometry through this a deep yet broad introduction to a vast subject eventually bringing them to the forefront of the topic via a non intimidating style

Homological Theory of Representations Henning Krause, 2021-11-18 This book for advanced graduate students and researchers discusses representations of associative algebras and their homological theory **Algebra IX** A.I. Kostrikin, I.R. Shafarevich, 2013-04-17 The first contribution covers the theory of finite groups of Lie type which is an important field of current mathematical research After giving the basic information Carter describes the Deligne Lusztig method of obtaining characters of these groups using l adic cohomology and subsequent work of Lusztig The second part by Platonov and Yanchevskii surveys the structure of finite dimensional division algebras and includes an account of reduced K theory
