McCaffrey, Kevin Duff, Holly James Westervelt, 2013-11-11

The impetus for this volume began with our research in the 1980 s involving serial neuropsychological evaluation with various patient populations At that time reports on the practice effects associated with routinely utilized clinical neuropsychological instruments were sparse While test retest data were available for almost all assessment instruments this was usually in the form of correlation coefficients and not changes in mean performance between or across assessment periods see McCaffrey Westervelt 1995 for a detailed discussion of these and related issues Clinical neuropsychological practitioners had few guidelines to assist them in determining if a change in a patient s performance across assessments was due to an intervention maturation practice effects or a combination of factors This volume represents our efforts at reviewing the literature between 1970 and 1998 and extracting the reported information on practice effects The tables include the

assessment instrument used information on the subject patient groups the sample size n gender age intervention interval between the assessments scores at both assessment points and the citation Those studies that reported data on more than two assessment points are indicated by a notation however any data beyond the second assessment are not reported and the interested reader should refer to the original article The tables are arranged alphabetically for the most widely used assessment instruments Those instruments for which there was limited data on practice effects are grouped by domain e g

Incagnoli, 2013-06-29 This volume reflects in part an update of Clinical Application of Neuropsychological Test Batteries edited by Theresa Incagnoli Gerald Goldstein and Charles Golden some 10 years ago While the initial concept of the present editors involved doing a straightforward update of each chapter it soon became apparent that the field of clinical neuropsychology had changed so dramatically and rapidly that substantial changes in the outline had to be made It was our view that sufficient interest remained in the standard comprehensive neuropsychological test batteries to make an update worthwhile We asked four senior people to take on this assignment James Moses Jr and Arnold Purisch in the case of the Luria Nebraska Battery and James Reed and Homer Reed for the Halstead Reitan Battery These individuals all have long term associations with these procedures and can be viewed as pioneers in their development However it also seemed to us that there was an increasing interest in the psychometric aspects of the standard procedures and in assessment issues related to the relative merits of using standard or individualized assessment strategies Thus we have chapters by Elbert Russell and Gerald Goldstein that provide discussions of these

current methodological and clinical issues During the past 10 years the cognitive revolution has made a strong impact on neuropsychology The interest of cognitive psychologists in brain function has increased dramatically and we now have an active field of cognitive neuropsychology something that was only beginning 10 years ago

Ziskin's Coping with Psychiatric and Psychological Testimony David Faust, 2012-01-12 This highly effective guide is designed to help attorneys differentiate expert testimony that is scientifically well established from authoritative pronouncements that are mainly speculative Building on the foundation of Jay Ziskin's classic work this updated text blends

the best of previous editions with discussion of positive scientific advances in the field to provide practical guidance for experts and lawyers alike Major contributors in the field summarize the state of the literature in numerous key areas of the behavioral sciences and law Working from these foundations the text provides extensive guidance tips and strategies for improving the quality of legal evaluations and testimony appraising the trustworthiness of experts opinions and as follows bolstering or challenging conclusions in a compelling manner Distinctive features of this text include detailed coverage of admissibility and Daubert challenges with unique chapters written by an eminently qualified judge and attorney hundreds of helpful suggestions covering such topics as forensic evaluations discovery and the conduct of depositions and cross examinations and two chapters on the use of visuals to enhance communication and persuasiveness including a unique chapter with over 125 model visuals for cases in psychology and law More than ever the sixth edition is an invaluable teaching tool and resource making it a must have for mental health professionals and attorneys

Clinical Guide to Mental Disability Evaluations Liza Gold, Donna L. Vanderpool, 2013-01-11 Disability evaluations are the most common clinical mental health evaluations conducted for nontreatment purposes They place mental health professionals in the role of communicating information that is typically confidential to administrative and legal systems Unfortunately mental health professionals receive little to no training in conducting assessments that focus on disability and disability management and often do not understand the implications and risks of providing this information especially without conducting what are often specialized evaluations Clinical Guide to Mental Health Disability Evaluations is geared for general mental health practitioners providing them with the basic information needed to competently provide the various types of disability evaluations It also provides enough information to inform forensic mental health providers in conducting more specialized evaluations
