Dynamics Of Marine Craft, The: Maneuvering And Seakeeping Edward M Lewandowski, 2004-07-14 This book presents a theoretical treatment as well as a summary of practical methods of computation of the forces and moments that act on marine craft Its aim is to provide the tools necessary for the prediction or simulation of craft motions in calm water and in waves In addition to developing the

required equations the author gives relations that permit at least approximate evaluation of the coefficients so that useful results can be obtained The approach begins with the equations of motion for rigid bodies relative to fixed and moving coordinate systems then the hydrodynamic forces are examined starting with hydrostatics and progressing to the forces on a moving vehicle in calm water and after a review of water wave theory in waves Several detailed examples are presented including calculations of hydrostatics horizontal and vertical plane directional stability and wave induced motions Also included are unique discussions on various effects such as fin hull interactions numerical stability of integrators heavy torpedoes and the dynamics of high speed craft The book is intended to be an introductory level graduate text and a reference for the practicing professional *Bibliography of Scientific and Industrial Reports* ,1970 **The Shipbuilder and Marine Engine-builder** ,1934 Underwater Science and Technology Information Bulletin ,1969 Includes Citations and Patents abstracts sections **Who's who of British Engineers** ,1968 The Dynamics of Marine Craft Edward M.
