Handbook Of Neuroleadership:

Handbook of NeuroLeadership David Rock, Al H. Ringleb, 2013-10-30 Neuroleadership is a new field of study drawing on the latest brain research to improve the quality of leadership and leadership development. The field is based on the neuroscience of four leadership activities: how leaders make decisions and solve problems, regulate their emotions, collaborate with others, and facilitate change. These four domains provide a foundation for both research and education. The field emerged out of an international summit in Asolo, Italy, in 2007 and since then has continued to develop across annual Summits around the globe and with the publication of a peer-reviewed journal along with academic education and hundreds of student-led research projects. This edited volume publishes original empirical studies as reviews of the literature in order to give the reader easy access to the state of the art in NeuroLeadership. It brings together some of the most important research published to date, drawing from the most influential papers published in all the NeuroLeadership Journals between 2008 and 2013. This volume holds contributions of 52 authors from 5 countries representing some of the major neuroscience laboratories around the world, including Columbia, Notre Dame, NYU, and UCLA. Topics include research on staying cool under pressure, the brain's braking system, the SCARF model, the neuroscience of engagement, the Healthy Mind Platter, and many others. There are also key discussion papers about the development of the field as well as several early case studies on using neuroscience to improve leadership. Designed for executives, organizational development, talent management, human resources, and learning professionals, as well as educators and students, this volume is a valuable resource for getting up to speed on the core research in the field to date and as a starting point for future research and development. Strategy-Driven Leadership Michael A. Couch, Richard S. Citrin, 2019-10-14 It is estimated that U S companies spend over 14 billion annually on leadership development Match that number to the abundant and growing research that finds most leadership development to be ineffective and the conclusion is a phenomenal amount of waste The remedy for this situation is to have business strategy drive leadership development instead of creating programs that match a one size fits all approach to leadership This book's approach called Strategy Driven Leadership Development SDLD puts business strategy first It maintains an emphasis on building leadership programs around what it will take to make the business successful as opposed to implementing a program in the hopes that it will benefit the strategy The result is a differentiated and targeted approach called Intentional Leadership Development which provides the structure for transforming how leadership development is undertaken At the heart of this book however is the explanation of how small incremental changes in action and perspective create meaningful changes in the way leadership is developed The focus is on the leadership behaviors associated with success for any company Some companies may need leaders with better financial acumen while others may require better teamwork for success These skills are learnable and when the energy of an organization is behind it then leadership development can be transformational The authors method retools prior leadership efforts the emphasis is not on previous failures and restarting with new programs There are many effective ideas and actions that are currently embedded in

leadership programs but they miss the critical element of tying their efforts to the business strategy Strategy Driven Leadership changes the way organizations think about and drive their leadership talent initiatives among their current and upcoming leaders The book is filled with research science based information case studies and practical hands on tools on why and how this Strategy Driven Leadership Development model will transform company leadership approaches The Neuroscience of Learning and Development Marilee J.
