Project Management with Dynamic Scheduling Mario Vanhoucke,2012-02-09 The topic of this book is known as dynamic scheduling and is used to refer to three dimensions of project management and scheduling the construction of a baseline schedule and the analysis of a project schedule s risk as preparation of the project control phase during project progress This dynamic scheduling point of view implicitly assumes that the usability of a project s baseline schedule is rather limited and only acts as a point of reference in the project life cycle Consequently a project schedule should especially be considered as nothing more than a predictive model that can be used for resource efficiency calculations time and cost risk analyses project tracking and performance measurement and so on In this book the three dimensions of dynamic scheduling are highlighted in detail and are based on and inspired by a combination of academic research studies at Ghent University www.ugent.be in company trainings at Vlerick Leuven Gent Management School www.vlerick.com and consultancy projects at OR AS www.oras.be First the construction of a project baseline schedule is a central theme throughout the various chapters of the book and

is discussed from a complexity point of view with and without the presence of project resources Second the creation of an awareness of the weak parts in a baseline schedule is discussed at the end of the two baseline scheduling parts as schedule risk analysis techniques that can be applied on top of the baseline schedule Third the baseline schedule and its risk analyses can be used as guidelines during the project control step where actual deviations can be corrected within the margins of the project s time and cost reserves
