

# HALO EFFECT

The halo effect is a cognitive bias where our overall impression of a person or thing is influenced by a single positive trait or characteristic.

## DEFINITION

The halo effect occurs when we generalize positive qualities to other aspects, even if there is no direct evidence to support it. For example, if someone is good at football, we might assume they're good at poetry as well. This bias can affect our judgments and evaluations, leading to skewed perceptions and unfair assessments.

## EXAMPLE

**Beauty Bias:** Imagine you meet someone who is physically attractive, and based on their looks alone, you assume they must also be intelligent and kind. As a result, you tend to overlook any flaws or negative traits they may possess and view them in an overly positive light.

Townsend, 2013-04-15 The plan for this volume emerged during the international Leipzig conference commemorating the centenary of the death of Gustav Fechner The contributors suggested that while many features of modern psychological theory were anticipated by Fechner many new theoretical approaches owe much more to him than often is realized As such they decided to honor Fechner by evaluating his own contribution to the founding of psychology and psychoanalysis by deepening the foundations of psychological theories of consciousness perception and choice and by using the analysis of time to create a new appreciation of constraints that bind mental processes together Thus this volume spans an extraordinary range of psychological topics from hermeneutics to the time quantum basis for mental processes in a way that would both amaze and delight Fechner Moreover the international reach of his pioneering ideas can be seen from the current locations of the contributors The span from Japan to the United States to Holland to Germany and to Israel provides a global measure of Fechner s scientific legacy
