Handbook Of Adolescent Health Risk Behavior Issues In Clinical Child Psychology:

Handbook of Adolescent Health Risk Behavior Ralph J. DiClemente, William B. Hansen, Lynn E. Ponton, 2013-11-21

Adolescence is a developmental period of accelerating physical psychological social cultural and cognitive development often characterized by confronting and surmounting a myriad of challenges and establishing a sense of self identity and autonomy It is also unfortunately a period fraught with many threats to the health and well being of adolescents and with substantial consequent impairment and disability Many of the adverse health consequences experienced by adolescents are to a large extent the result of their risk behaviors Many adolescents today and perhaps an increasing number in the future are at risk for death disease and other adverse health outcomes that are not primarily biomedical in origin In general there has been a marked change in the causes of morbidity and mortality among adolescents Previously infectious diseases accounted for a disproportionate share of adolescent morbidity and mortality At present however the overwhelming toll of adolescent morbidity and mortality is the result of lifestyle practices *Adolescent Health Risk Behavior* Allison Schettini Evans, 2003

O'Donohue, Lorraine T. Benuto, Lauren Woodward Tolle, 2014-07-08 Adolescence is a pivotal period of development with respect to health and illness It is during adolescence that many positive health behaviors are consolidated and important health risk behaviors are first evident thus adolescence is a logical time period for primary prevention In addition the predominant causes of morbidity and mortality in adolescence are quite different from those of adults indicating that early identification and treatment of adolescent health problems must be directed to a unique set of targets in this age group

Moreover because of the particular developmental issues that characterize adolescence intervention efforts designed for adults are often inappropriate or ineffective in an adolescent population Even when chronic illnesses are congenital or begin in childhood the manner in which the transition from childhood to adolescence to young adulthood is negotiated has important implications for disease outcomes throughout the remainder of the person s life span Organized in five major sections General Issues Developmental Issues Treatment and Training Mental Health and Physical Health and 44 chapters Handbook of Adolescent Health Psychology addresses the common and not so common health issues that tend to affect adolescents Coverage includes Context and perspectives in adolescent health psychology Health literacy health maintenance and disease prevention in adolescence Physical disorders such as asthma obesity physical injury and chronic pain Psychological disorders such as substance abuse attention deficit hyperactivity disorder depression and eating disorders Congenital chronic diseases such as type 1 diabetes and spina bifida Handbook of Adolescent Health Psychology is the definitive reference for pediatricians family physicians health psychologists clinical social workers rehabilitation specialists and all practitioners and researchers working with adolescents

Control Theories of Crime and Delinquency Chester L. Britt,Michael R. Gottfredson,2017-11-30 For the past twenty to thirty years

control theories of crime have been at the center of theoretical development in criminology Key to the control theory perspective is the notion that crime is an inherently individual act and its explanation requires that we focus on the characteristics of individuals who commit crimes Consequently control theory focuses on such issues as self control and social control The contributions to this volume explicate and extend the application of control theory It is divided into three general areas Part 1 focuses on key assumptions and components of control theories Contributors discuss the notion of learning or socialization in the context of control theory and the effects that families peers and the criminal justice system have on self control social ties and criminal behavior Part 2 applies control theory to areas typically assumed to be out of the domain of self control theory and social control theory such as gender differences in crime domestic violence and group crime Considering control theory s emphasis on explaining individual criminal acts these chapters suggest an interesting area of development by highlighting the possibility that differences in crime across or within groups may begin with individual characteristics and then making inferences about groups and group processes Part 3 approaches the explanation of crime cross nationally and at the macro level Although the authors take different approaches they all illustrate that a theory of crime does not require culture specific elements in order to be a valid cross cultural explanation Contributors to this volume include Robert Agnew Todd Armstrong Leana Allen Bouffard Augustine Brannigan Chester Britt Barbara Costello Maja Dekovic Matt DeLisi Michael Gottfredson Henriette Haas Kelly H Hardwick Travis Hirschi Marianne Junger Martin Killias Helen Mederer Kevin Thompson and Alexander Vazsonyi

Raczynski, Ralph J. DiClemente, 2013-11-11 The idea for this volume developed when we were co teaching our introductory master's level course in the Department of Health Behavior at the UAB School of Public Health a core course for all masters of public health students in the school regardless of the department in which they enrolled or the focus of their studies Hence in the course we sought to provide both students in our department as well as those who might not ever again take a health behavior course with an overview that would both truly represent the field and substantially provide educational research and public health practice benefits This was and continues to be a challenge with the diversity of students specializing in fields that include not only health behavior but also biostatistics environmental health sciences epidemiology health care organization and policy international health and maternal and child health The course that we taught attempted to provide the students with an overview of some of the important health promotion and disease prevention theories methods and policy issues while reviewing applications of these theories and methods to promoting health and preventing disease through a variety of channels for a variety of disease outcomes and among a variety of populations Since no one text provided this variety of readings we depended on readings and guest lectures *Handbook of Behavioral and Emotional Problems in Girls* Debora Bell, Sharon L.
