Handbook of Aluminium Recycling Josef Domagala, Petra Haag, Thomas Niehoff, Christoph Schmitz (Dipl.-Ing), 2014

Handbook of Aluminium Recycling, 2014

Handbook of Aluminium Recycling Christoph Schmitz, 2006 The range of useful books and other publications on furnace engineering thermodynamics and process engineering is vast The specialized practitioner however is obliged generally with some degree of effort to filter out the information and processes for heat treatment of specific materials that are relevant to his or her needs The Handbook of Aluminium Recycling published exclusively in English guides the practitioner in the field of production design or plant engineering in detail through the various technologies involved in aluminium recycling An examination of aluminium as a material and of its recovery from natural raw materials sources in the context of a brief introduction is followed by discussion of the various processes and procedures Melting and casting plants and also metal treatment facilities are described in detail as are provisions and equipment for environmental and workforce safety A separate chapter is devoted to plant planning operation and control in view of the fact that the arrangement of the individual plant elements has a significant influence on cost efficiency and dependable operation The technologies used for remelting of aluminium are analyzed both for their particular potential uses in conjunction with the scrap charged and with the attainment of the target alloy The illustration of design details enables the practitioner to judge whether and how the technology examined in each case might be used for any particular application Thermodynamics and metallurgical facts required for understanding of the relevant processes are drawn from practice The reader is thus provided with a detailed overview of the technology of aluminium recycling and familiarized quickly and systematically with both long proven and new innovative methods
