Kok,Luc de Raedt,2005 Ever since the early days of machine learning and data mining it has been realized that the traditional attribute value and item set representations are too limited for many practical applications in domains such as chemistry biology network analysis and text mining This has triggered a lot of research on mining and learning within alternative and more expressive representation formalisms such as computational logic relational algebra graphs trees and sequences The motivation for using graphs trees and sequences Is that they are 1 more expressive than flat representations and 2 potentially more efficient than multi relational learning and mining techniques At the same time the data structures of graphs trees and sequences are among the best understood and most widely applied representations within computer science Thus these representations offer ideal opportunities for developing interesting contributions in data mining and machine learning that are both theoretically well founded and widely applicable The goal of this book is to collect recent outstanding studies on mining and learning within graphs trees and sequences in studies worldwide **Algebraic Informatics** Symeon Bozapalidis,George Rahonis,2009-08-28 This book constitutes the refereed proceedings of the Third International Conference on Algebraic Informatics CAI 2009 held in Thessaloniki Greece in May 2009 The 16 full papers were carefully reviewed and selected from 25 submissions The papers cover topics such as algebraic semantics on graph and trees formal power series syntactic objects algebraic picture processing finite and infinite computations acceptors and transducers for strings trees graphs arrays etc decision problems algebraic characterization of logical theories process algebra algebraic algorithms algebraic coding theory algebraic aspects of cryptography **Formal and Natural Computing** Wilfried Brauer,Hartmut Ehrig,Juhani Karhumäki,Arto K. Salomaa,2003-08-01 This book presents state of the art research in theoretical computer science and related elds In particular the following areas are discussed automata theory formal languages and combinatorics of words graph transformations Petri nets concurrency as well as natural and molecular computing The articles are written by leading researchers in these areas The writers were originally invited to contribute to this book but then the normal refereeing procedure was applied as well All of the articles deal with some issue that has been under vigorous study during recent years Still the topics range from very classical ones to issues raised only two or three years ago Both survey articles and papers attacking speci c research problems are included The book highlights some key issues of theoretical computer science as they seem to us now at the beginning of the new millennium Being a comprehensive overview of some of the most active current research in theoretical computer science it should be of de nite interest for all researchers in the areas covered The topics range from basic decidability and the notion of information to graph grammars and graph transformations and from trees and traces to aqueous algorithms DNA encoding and self assembly Special e ort has been given to lucid presentation Therefore the book should be of interest also for advanced students *Flexible Pattern Matching in Strings* Gonzalo
