Steiner, 2011-08-14 Headache disorders are among the most common disorders of the nervous system They are pandemic and in many cases they are recurrent and can accompany the patient for the whole life These disorders impose a substantial burden on headache sufferers on their families and on society the individual impact is measured by the frequency and severity of attacks while the societal burden is measured in terms of loss of activity at work and school as well as of costs for the health system As a matter of facts headaches are ranked in the top ten and maybe the top five causes of disability worldwide they are therefore extraordinarily common Population based studies have mostly focused on migraine which even if it is the most frequently studied headache disorder is not the most common Other types of headache such as the more prevalent TTH and sub types of the more disabling chronic daily headache have so far received less attention and need to be better investigated This book will provide a useful tool to a wide medical population who is required specific skills to diagnose and manage these frequent and often disabling disorders Furthermore it could also represents a compendium for medical students who are usually introduced to this topic through multidisciplinary university programmes Handbook of Pain Medicine - E-Book G. themselves present the integrated Headache Reduction Program HARP that they developed at the Princeton Headache Clinic Based on the central insights that the predisposition to headaches is a sign of an unusually sensitive nervous system and that drugs are only one component of the most successful treatment plans this remarkable program instructs readers in a range of techniques including how to relieve the pain of migraines how to detect and ward off oncoming headaches how to prevent migraines from even threatening The innovative solutions detailed in *Breaking the Headache Cycle* range from simple breathing exercises and dietary changes to support groups and the latest medications In this thorough and accessible guide the authors promise new relief for those already being treated for recurring headaches and for those who currently suffer in silence

Pocket Guide Pain Management Claudia Spies, Benno Rehberg, Stephan A. Schug, Gunnar Jaehnichen, Sarah Harper, 2008-09-02 In the United States about 50 million people suffer from recurrent or chronic pain and nearly 10% of adults take medication for pain daily Further the disease burden of pain is expected to grow relative to other illnesses and conditions Despite the advances in pain medicine most physicians are not equately trained to treat chronic or even acute pain As in other fields of medicine pain medicine has long been dominated by expert opinion relying on personal expertise and only recently has a systematic evaluation of treatments in the terms of evidence based medicine been performed And also as in other fields of medicine a lot can be achieved in pain medicine when certain basic diagnostic and therapeutic pathways are followed correctly more than can be achieved when only a few specialists are able to treat these conditions Standard operating procedures SOPs are supposed to be concise practical aids for clinicians standardizing treatments diagnostic pathways and procedures in one of sometimes many possible ways Although based on the available evidence they are not evidence based guidelines and are not supposed to replace such guidelines On one hand evidence based medicine often leaves many options open since in many cases the available evidence is not sufficient to recommend a specific option On the other hand there might be reasons due to clinical practice e.g.
