Governance of Marine Fisheries and Biodiversity Conservation Serge M. Garcia, Jake Rice, Anthony Charles, 2014-07-15

Governance of Marine Fisheries and Biodiversity Conservation explores governance of the world's oceans with a focus on the impacts of two inter-connected but historically separate streams of governance one for fisheries the other for biodiversity conservation Chapters most co-authored by leading experts from both streams investigate the interaction of these governance streams from ecological economic social and legal perspectives with emphasis on policies institutions processes and outcomes on scales from the global to the local community and with coverage of a range of themes and regions of the world The book opens with chapters setting the historical context for the two marine governance streams and framing the book's exploration of whether as the streams increasingly interact there will be merger or collision convergence or co evolution The concluding chapter synthesizes the insights from throughout the book relative to the questions posed in the opening chapters It also draws conclusions about future needs and directions in the governance of marine fisheries and biodiversity vital to the future of the world's oceans With cutting edge chapters written by many leading international experts in fisheries management and biodiversity conservation and edited by three leading figures in this crucially important subject Governance of Marine Fisheries and Biodiversity Conservation is an essential purchase for fisheries scientists economists resource managers and policymakers and all those working in fields of biodiversity conservation marine ecology and coastal livelihoods Libraries in all universities and research establishments where environmental and or marine studies conservation ocean policy and law biological and life sciences and fisheries management are studied and taught should have copies of this most important book

Rethinking Fisheries Governance Hoang Viet Thang, 2017-08-11 This book explores how the state can foster collective action by fisher's communities in fisheries management It presents a different perspective from Elinor Ostrom's classic work on the eight institutional conditions that foster collective action in natural resource management and instead emphasizes the role of the state in fisheries co-management engaging a state-centric notion of meta-governance It argues that first the state is required to foster collective action by fishers and secondly that the current fisheries co-management arrangements are state-centric The study develops these arguments through the analysis of three case studies in Japan Vietnam and Norway The author also makes a theoretical contribution to governance literature by developing Ostrom's society-centric framework in a way which makes it more amenable to the analysis of state capacity and government intervention in a comparative context This book will appeal to students and scholars of global governance fisheries management co-management and crisis management as well as practitioners of fisheries management

Environmental Governance and Common Pool Resources Michael Faure, Peter Mascini, Jing Liu, 2017-09-07 This book analyses the drivers of specific common pool resource problems particularly in fisheries and forestry examining the way in which private and public regulation have intervened to fight the common pool resource problem by contributing to the

establishment and maintenance of property rights It focuses on the various forms of regulation that have been put in place to protect fisheries and forestry over the past decades both from a theoretical as well as from a policy perspective comparing the concrete interaction of legal and policy instruments in eight separate jurisdictions *International Law for Small-Scale Fisheries* Julia N. Nakamura, 2025-03-27 This book provides an original and groundbreaking account of the applicability and key contributions of international law to small scale fisheries a fisheries subsector that has been historically overlooked by governments and international legal scholarship Small scale fisheries constitute most of the world's capture fisheries workforce they sustain the livelihoods of fishers and their communities while building and transmitting traditional knowledge and culture Significant attention has been given to small scale fisheries by the international community over the past decade building the momentum for dedicated research on such a topic Nevertheless the literature examining small scale fisheries from an international legal perspective remains scarce This book fills this gap by systemically examining different international legal regimes to unravel the normative foundations for securing the meaningful participation of small scale fisheries peoples in international fisheries management It connects the ecosystem approach a key principle of international fisheries law and the human rights regime to elucidate the benefits that participatory international fisheries management brings to enhance both the ecological and social aspects of fisheries sustainability It also examines the extent to which fisheries governance is democratic and provides an enabling framework for the integration of fishers knowledge into international fisheries management It is thereby oriented toward more justice and fair outcomes for small scale fisheries This book will be a valuable resource for academics and researchers with an interest in the governance of fisheries in international law the law of the sea environmental law and human rights law as well as to practitioners and policymakers working on the development and implementation of laws and policies governing fisheries and natural resources **Ocean Governance** Stefan Partelow, Maria Hadjimichael, Anna-Katharina Hornidge, 2023-03-01 This Open Access book on Ocean Governance examines sustainability challenges facing our oceans today The book is organized into three sections knowledge systems policy foundations and thematic analyses The knowledge produced in the book was catalyzed by the scientific outcomes within the European funded Cooperation in Science and Technology COST network Ocean Governance for Sustainability Challenges Options and the Role of Science This network brings together scientists policy makers and civil society representatives from 28 nation states to cooperate on ocean governance research This book offers a compilation of new research material including focused case studies broad policy syntheses and reflective chapters on the history and current status of knowledge production systems on ocean governance New research material is presented although some chapters draw on secondary sources The book starts with synthetic review chapters from the editors outlining past and present knowledge systems addressing how and why ocean governance for sustainability is where it currently stands with critical reflections on existing narratives path dependencies and colonialist histories This is followed by chapters addressing

synthesizing and analyzing different legal and policy frameworks for ocean governance both regionally and internationally At the core of the book are the thematic analyses which provide focused case studies with detailed contextual information in support of different ocean governance challenges and sustainability pathways around the world The book concludes with a chapter explicitly targeting students researchers and policy makers with key take away messages compiled by the editors

multi level collaboration shared learning innovative policies and institutional arrangements such as new property rights regimes and co management methodologies that engage with indigenous cultural practices and entrepreneurial activities including income and livelihood diversification Case studies are included from a range of countries including Canada Japan Brazil Indonesia Mexico South Africa Thailand the South Pacific and Europe The authors integrate theory with practical examples to improve coastal marine policy and governance and draw upon emerging concepts from social ecological resilience and transformations adaptive governance and the scholarship on the commons

The Law of the Sea Nele Matz-Lück, Øystein Jensen, Elise Johansen, 2022-09-19 The United Nations Convention on the Law of the Sea follows a comprehensive approach and can be interpreted dynamically to include the regulation of all potential human uses of the ocean but the law of the sea cannot be viewed in isolation from other fields of international law International law does not resemble a hierarchically structured legal system its different parts interact when different rules address the same activity or situation The academic discussion concerning the specialization and proliferation of international legal rules and dispute settlement bodies has theoretical as well as practical relevance for the law of the sea and its interaction with other parts of international law The intensified use of the oceans for different purposes and the ongoing proliferation of international rules addressing different activities from different perspectives and with distinct foci require a more thorough evaluation of how the law of the sea relates to other fields of international law how the normative context can be approached theoretically and if interdisciplinary interfaces can be adequately addressed This book discusses the normative context of the law of the sea and the interactions of the law of the sea with other legal regimes By connecting high quality research with new ideas and perspectives this book offers expertise from different fields and perspectives in which the interaction between the law of the sea and other fields of international law becomes particularly relevant
