Governance Of Natural Resources Uncovering The Social Purpose Of Materials In Nature:

Governance of Natural Resources Jin Satō, 2013 Scholarly communities and policy experts have a tendency to divide natural resources into categories hindering holistic understanding Similarly the stakeholders themselves the state business and people are conceived monolithically making it difficult to grasp how business interests intra bureaucratic politics and civil society movements influence policy outcomes This book examines the socio political dynamic generated by the environment and its attendant resources how nature becomes a resource and how this process in turn shapes our vision of society It deploys a case study approach in examining the interactions between bureaucratic institutions rural communities national leaders and business elites allowing for a more nuanced analysis Particular emphasis is placed on how resources become the subject of conflict but also opportunities for cooperation and how different societies might establish more sustainable interactions with nature The way society controls natural resources is the foundation of both economic development and environmental conservation The primary motive for natural resource management has been the development and production of marketable commodities and institutional structures have been shaped accordingly The Social Constitution of Natural Resources asks that we re consider the very concept of resources and how we view them

Natural Resources and Human Rights Jérémie Gilbert, 2018-10-24 Natural resources and their effective management are necessary for securing the realisation of human rights The management of natural resources is linked to broad issues of economic development as well as to political stability peace and security but it is also intimately connected to the political economic social and cultural rights of individuals and communities relying on these resources The management of natural resources often leads to ill planned development misappropriation of land corruption bad governance misaligned budget priorities lack of strong institutional reforms and weak policies coupled with a continued denial of the human rights of local communities This book argues that human rights law can play an important role in ensuring a more effective and sustainable management of natural resources putting forward the idea of a human rights based normative framework for natural resource management It offers a comprehensive analysis of the different norms procedures and approaches developed under human rights law that are relevant to the management of natural resources Advocating for a less market and corporate approach to the control ownership and management of natural resources this book supports the development of holistic and coherent integration of human rights law in the overall international legal framework governing the management of natural resources

Origins and Evolution of Environmental Policies Tadayoshi Terao, 2021-02-26 This unique book traces the origins and evolution of environmental policy formation comparing the differences in this process between developing and developed countries It focuses on the importance of the state s role and issues of timing and sequence in the creation of environmental policies

Hazardous Air Pollutants Dong-Chun Shin, 2016-04-06 Hazardous Air Pollutants Case Studies from Asia examines the variety of public health problems such as cardiovascular disease respiratory disease increased

mortality and impaired mental health that are severely affecting multiple Asian countries as a result of exposure to high concentrations of air pollution in the wake of rapid industrialization

Measuring Vulnerability to Natural Hazards Jörn Birkmann, UNU-EHS Expert Working Group on Measuring Vulnerability, 2013 Climate change adaptation building resilience and vulnerability and risk reduction are noble words but do we really know what is meant by these terms and how to assess their respective progress This book seeks to address these questions The world has recently experienced disasters of a magnitude rarely seen before the cascading disaster in Japan the earthquake in Haiti and floods in Pakistan and Australia are a few prominent examples These major disasters underline the fact that many communities and world regions are still vulnerable to extreme events and natural hazards Additionally creeping changes such as sea level rise are emerging pressures in the context of climate change These changes are very likely to seriously affect livelihoods in many regions The dynamic and complex interaction between vulnerable communities and climate and non climate related sudden onset and creeping hazards will most likely increase the risk of crises and disasters in the future Following the popularity of the first edition this volume has been completely revised and fully updated This new edition includes the dimension of adaptation to climate change and new risks resulting from climate change It combines practical examples from Africa Asia the Americas and Europe with theoretical and conceptual frameworks It is key reading for all those interested in improving risk reduction and adaptation strategies to extreme events and gradual changes in the context of climate change and natural hazards

Beyond Reductionism Katharine Farrell, Tommaso Luzzati, Sybille van den Hove, 2013-05-07 This is a book about the work of scientists in the era of the Anthropocene where human beings appear to have become a driving force in the evolution of the planet It is a diverse collection of empirical methodological and theoretical chapters concerned with the practice of interdisciplinary social ecological systems research The aim of the contributors is to give the reader an appreciation for the range and complexity of the challenges faced by researchers research institutions and wider communities trying to make sense of the causes and consequences of the this new era of global environmental change The

tragedy of the Anthropocene of the large scale anthropogenic habitat destruction and planet wide impacts of anthropogenic climate change is not that science has failed humanity but rather that it has served humanity all too well making possible in just a few hundred years volumes and scales of human activity far exceeding anything ever seen before Coming to terms with that success was the aim of the 1969 Alpbach Symposium from which this book draws its name where contributors including Friedrich Hayek and Ludwig von Bertalanffy asked themselves what theory practices and standards are required to move beyond reductionism Like those from 1969 the answers presented in this collection are hugely diverse ranging from PhD students concerned with research methods and institutional obstacles to mid career scholars presenting their innovative beyond reductionism research methods to emeritus professors looking back over what has been achieved in the past 30 years and suggesting where things might go from here All the contributors begin from the premise that the challenges of the Anthropocene can only be successfully met if interdisciplinary research effectively brings together social and natural sciences the humanities stakeholders and decision makers They conclude in unison that both the institutional and the methodological foundations needed to do this work are still sorely lacking While this may seem a dismal position the book is full of success stories such as the integrative approach of MuSIASEM Multi Scale Integrative Assessment of Social Ecological Metabolism developed by Mario Giampietro's group in Barcelona Spain the alternative perspectives of what Ariel Salleh calls the meta industrial discourse in Ecofeminism or the innovative trans departmental status of the Stockholm Resilience Centre in Sweden Putting both the theoretical and methodological challenges of moving beyond reductionism on the table for discussion this text aims to help a growing community of passionate thinkers and actors better understand themselves and their work

Natural Resource Use and Global Change K. C. H. Keskitalo, 2025-04-03 Nature has often been understood in literature through a disjunction to human systems This can be seen in the nature culture binary or even more clearly in the opposition of wilderness to civilization Drawing on historical and present day examples and case studies from Northern Europe this book critically examines the ways in which the use of such dichotomies can be transcended to respond to sustainability challenges Using illustrative examples the authors demonstrate how shared histories and development of land use continue to impact multiple practices today The book explores the prerequisites for environmental management approaches that counterpose the nature culture binaries that are present in existing governance mechanisms This volume will be of great interest to students and scholars of environmental management environmental law and policy and environmental anthropology **The Law and Governance of Mining and Minerals** Ana Elizabeth Bastida, 2020-12-10 This book explores a disciplinary matrix for the study of the law and governance concerning mining and minerals from a global perspective The book considers the key challenges of achieving the goals of Agenda 2030 and the transition to low carbon circular economies The perspective encompasses the multi faceted and highly complex interaction of multiple fields of international law and policy soft law and standards domestic laws and regulations as well as local levels of ordering of social relations What emerges is a largely neglected unsystematised and under theorised field of study which lies at the intersection of the global economy environmental sustainability human rights and social equity But it also underlies the many loopholes to address at all levels most notably at the local level land and land holders artisanal miners ecosystems local economies local linkages and development The book calls for a truly cosmopolitan academic discipline to be built and identifies challenges to do so It also sets a research agenda for further studies in this fast changing field **Handbook on Global Value Chains**

Stefano Ponte, 2019 Global value chains GVCs are a key feature of the global economy in the 21st century They show how international investment and trade create cross border production networks that link countries firms and workers around the globe This Handbook describes how GVCs arise and vary across industries and countries and how they have evolved over time in response to economic and political forces With chapters written by leading interdisciplinary scholars the Handbook unpacks the key concepts of GVC governance and upgrading and explores policy implications for advanced and developing economies alike

Governance, Natural Resources and Post-Conflict Peacebuilding Carl Bruch, Carroll Muffett, Sandra Nichols, 2016-04-07 When the guns are silenced those who have survived armed conflict need food water shelter the means to earn a living and the promise of safety and a return to civil order Meeting these needs while sustaining peace requires more than simply having governmental structures in place it requires good governance Natural resources are essential to sustaining people and peace in post conflict countries but governance failures often jeopardize such efforts This book examines the theory practice and often surprising realities of post conflict governance natural resource management and peacebuilding in fifty conflict affected countries and territories It includes thirty nine chapters written by more than seventy researchers diplomats military personnel and practitioners from governmental intergovernmental and nongovernmental organizations The book highlights the mutually reinforcing relationship between natural resource management and good governance Natural resource management is crucial to rebuilding governance and the rule of law combating corruption improving transparency and accountability engaging disenfranchised populations and building confidence after conflict At the same time good governance is essential for ensuring that natural resource management can meet immediate needs for post conflict stability and development while simultaneously laying the foundation for a sustainable peace Drawing on analyses of the close relationship between governance and natural resource management the book explores lessons from past conflicts and ongoing reconstruction efforts illustrates how those lessons may be applied to the formulation and implementation of more effective governance initiatives and presents an emerging theoretical and practical framework for policy makers researchers practitioners and students Governance Natural Resources and Post Conflict Peacebuilding is part of a global initiative to identify and analyze lessons in post conflict peacebuilding and natural resource management The project has generated six books of case studies and analyses with contributions from practitioners policy makers and researchers Other books in this series address high value resources land water livelihoods and assessing and restoring natural resources

Sustainable Development Susan Baker, 2015-08-31 The current focus on sustainable development opens up debates surrounding our relationship with the natural world about what constitutes social progress and about the character of development both in the Global North and the Global South The promotion of sustainable futures is taking on a new urgency in the context of climate change and biodiversity loss This

concise and accessible text explores how the international community is responding to the challenge of sustainable development. It also investigates the prospect for and barriers to the promotion of sustainable development in high consumption societies of the industrialised world from the USA and the EU to the economies of transition in Eastern and Southern Asia. In *Sustainable Development* Baker considers the global impact of China's industrial boom as well as how Chinese investments are shaping the prospects for sustainable development on the African continent. This global coverage is balanced by investigating how local action ranging from the transition towns movement in the UK to the Green Belt movement in Kenya can contribute to the pursuit of sustainable development. The second edition has been extensively revised and updated and benefits from the addition of three new chapters: sustainable development in China, the governance of sustainable development and sustainable production and consumption. Climate change and biodiversity management have also been expanded into full chapters. Providing an up to date and comprehensive treatment of the issues surrounding the promotion of sustainable development, this unique internationally focused book combines a strong conceptual analysis with wide ranging empirical focus and a wealth of case material. Including summary points and suggestions for further reading as well as web resources and an extensive bibliography, it is ideal for students, scholars and researchers in the fields of environmental sciences, politics, geography, sociology and development studies.

Protected Area Governance and Management Graeme L. Worboys, Michael Lockwood, Ashish Kothari, Sue Feary, Ian Pulsford, 2015-04-08. *Protected Area Governance and Management* presents a compendium of original text, case studies and examples from across the world by drawing on the literature and on the knowledge and experience of those involved in protected areas. The book synthesises current knowledge and cutting edge thinking from the diverse branches of practice and learning relevant to protected area governance and management. It is intended as an investment in the skills and competencies of people and consequently the effective governance and management of protected areas for which they are responsible now and into the future. The global success of the protected area concept lies in its shared vision to protect natural and cultural heritage for the long term and organisations such as the International Union for the Conservation of Nature are a unifying force in this regard. Nonetheless, protected areas are a socio-political phenomenon and the ways that nations understand, govern and manage them is always open to contest and debate. The book aims to enlighten, educate and above all to challenge readers to think deeply about protected areas, their future and their past as well as their present. The book has been compiled by 169 authors and deals with all aspects of protected area governance and management. It provides information to support capacity development training of protected area field officers, managers in charge and executive level managers.

Discovering Political Ecology Gustav Cederlöf, Alex Loftus, 2023-09-18. Political ecology is one of the most vibrant fields of environmental research. This book introduces political ecology to a new generation of students in a daring new way as an interdisciplinary approach to environmental research but also as a series of lived realities and a praxis for change. The origins of political ecology are

often traced through an Anglo American canon In *Discovering Political Ecology* Gustav Cederlund and Alex Loftus instead take up the challenge of presenting the key conversations and the diverse traditions that have shaped this field with attention to its extensive international roots Inspired by voices and research in Asia Africa Europe and the Americas the authors address the concerns of those who from different social backgrounds have grown up in a world shaped by climate change and increasing environmental inequalities Engaging and accessible in style *Discovering Political Ecology* introduces a set of key concepts around which conversations in political ecology coalesce It also shows how these concepts allow you to make sense of some of the most pressing issues of our time issues around water energy agriculture forestry climate change and environmental justice Each chapter includes learning outcomes and suggested further readings extensive bibliographies and seminar activities to be used by students and educators At the cutting edge of the field the book will be of interest to those in all disciplines brought together in political ecology including but not limited to anthropology development studies ecology geography history and political science
