Towards an Articulated Phenomenological Interpretation of Architecture M. Reza Shirazi, 2014-04-23 This book sheds light on the contemporary status of phenomenological discourse in architecture and investigates its current scholastic as well as practical position. Starting with a concise introduction to the philosophical grounds of phenomenology from the points of view of Husserl, Merleau-Ponty and Heidegger, it presents a critical reading of the works of some leading figures of architectural phenomenology in both theory and practice such as Christian Norberg-Schultz, Kenneth Frampton, Juhani Pallasmaa and Steven Holl. Highlighting the main challenges of the current phenomenological discourse in architecture, this book formulates a more articulated method of phenomenological interpretation dubbed 'phenomenal phenomenology' as a new and innovative method of interpreting the built environment. Finally, using Tadao Ando's Langen Foundation Museum as a case study, it investigates the architect's contribution to phenomenological discourse, interprets and analyzes the Museum building using the new heuristic method and thus provides a clear example of its applicability. By introducing a clear articulated and practical method of interpretation, this book is of interest to academics and students analyzing and studying architecture and the built environment at various scales.

The Political Economy of Electricity Mark Cooper, 2017-04-24 Providing critical insights that will interest readers ranging from economists to environmentalists, policymakers and politicians, this book analyzes the economics and technology trends involved in the dilemma of decarbonization and addresses why aggressive policy is required in a capitalist political economy to create a sea change away from fossil fuels. The environmental damage across the globe is a result of the success of capitalist industrialism: 250 years of carbon pollution resulting from consumption of fossil fuels to drive the economy and the worldwide aspiration to ever increasing levels of economic development. But capitalism has also produced the tools to solve the problems it has created in the form of a technological revolution in low carbon renewables, distributed resources and intelligent systems to integrate supply and demand. This book comprehensively examines the political economy of electricity and analyzes the challenge of transforming today's electricity sector to meet the dual goals of decarbonization and development expressed in the Paris Agreement. Author Mark Cooper defines the dilemma of development and decarbonization as the great challenge facing the electricity industry and documents how the economic resources costs of a 100 percent renewable portfolio has declined to the point that decarbonization can pay for itself, making the low carbon renewable technologies that enable desired environmental and public health benefits an easy sell. He identifies the substantial benefit of increasing use of information communications and advanced control technologies, shows how targeted innovation could speed the transition by a decade or two and lower the overall cost of the transition by as much as half and

explains why the flexible multi stakeholder approach of the Paris Agreement is the correct approach

Governance Reform in Africa Jerome Bachelard, 2013-07-24 Poor governance is increasingly recognized as the greatest impediment to economic development in Sub Saharan Africa Currently some impressive governance reforms are underway in

many countries This includes cases such as Nigeria formerly the most corrupt country in the world according to Transparency International Yet other countries such as Chad are still in reform deadlock To account for these differences this book examines governance reform in Sub Saharan Africa based on an analysis of international and domestic pressures and counter pressures It develops a four phase model explaining why governance reforms advance in some instances whilst in others governance reforms stagnate or even relapse No study has sought to systematically examine the political forces both international and domestic behind the successful conduct of governance reform in Sub Saharan Africa Yet coordination collaboration and mutual support between international and domestic actors is critical to push individual governments onto the path of reform This book shows that while international and domestic pro reform pressures are important an analysis of anti reform pressures is also necessary to explain incomplete or failed reform The main theoretical arguments are structured around four hypotheses The hypotheses are theoretically generated and tested over four case studies Madagascar Kenya Nigeria and Chad On this basis the good governance socialization process is inductively developed in the concluding chapter This model illustrates how governance practices can evolve positively and negatively in all countries of Sub Saharan Africa based on the nature and relative strength of international and domestic pressures and counter pressures
