**Evolution of Early Humans to Modern Humans (FREE BOOK) by Darshan Singh** Darshan Singh, 2025-07-11 The book *Evolution of Early Humans to Modern Humans* by Darshan Singh is the second in a trilogy titled *Universe is the Mother of Humans* traces human development from ape like ancestors over 6 million years ago to modern *Homo sapiens*. It covers key stages like bipedalism, brain growth, tool use, migration out of Africa, agriculture and cultural evolution. It also explores the origins of language and world religions, highlighting how human societies and beliefs evolved over 130 000 years. *Kinship and Gender* Linda Stone, Diane E. King, 2018-09-27 Does kinship still matter in today's globalized increasingly mobile world? Do family structures continue to influence the varied roles that men and women play in different cultures? Answering with a resounding yes, Linda Stone and Diane E. King offer a lively introduction to and working knowledge of kinship. They firmly link these concepts to cross cultural gender studies, illuminating the malleable nature of gender roles around the world and over time. Written to engage students, each chapter in *Kinship and Gender* provides key terms and useful generalizations gleaned through research on the interplay of kinship and gender in both traditional societies and contemporary communities. Detailed case studies and cross cultural examples help students understand how such generalizations are experienced in real life. The authors also consider the ramifications of current social problems and recent developments in reproductive technology as they demonstrate the relevance of kinship and gender to students' lives. The fully revised sixth edition contains new case studies on foster parenting in the United States and on domestic violence. It provides new material on pets as family members and an expanded discussion of the concept of lineal masculinity. There is also a comparison of the adoption of new reproductive technologies in Israel with other countries along with a discussion of the issue of transnational movements in the use of these technologies. **Ecology of the Brain** Thomas Fuchs, 2018 Part 1 Criticism of neurobiological reductionism 1 Cosmos in the head 1 1 The idealistic legacy of brain research 1 2 First criticism embodied perception 1 2 1 Perception and motion 1 2 2 The coextension of lived body and physical body 1 3 Second criticism The objectivity of the phenomenal world 1 3 1 The space of perception 1 3 2 The objectivising achievement of perception 1 4 Third criticism the reality of colours 1 5 Summary 2 The brain as the subject's heir 2 1 First critique the irreducibility of subjectivity 2 1 1 Phenomenal consciousness 2 1 2 Intentionality 2 1 2 1 Intentionality and phenomenal consciousness 2 1 2 2 Intentionality and representation 2 2 Second criticism category mistakes 2 2 1 The mereological fallacy 2 2 2 The localisation fallacy 2 3 Third criticism the powerless subject 2 3 1 The unity of action 2 3 2 The role of consciousness 2 4 Summary the primacy of the lifeworld Part 2 Body person and the brain 3 Foundations subjectivity and life 3 1 Embodied subjectivity 3 1 1 The body as subject 3 1 2 The dual aspect of subjective and physical body 3 1 3 The dual aspect of life 3 2 Ecological and enactive biology 3 2 1 Self organisation and autonomy 3 2 2 Dependency and exchange between organism and environment 3 2 3 Subjectivity 3 2 4 Summary 3 3 The circular and integral causality of living beings 3 3 1 Vertical circular causality 3 3 2 Horizontal circular causality 3 3 3

*Free Imagination* Peter Ulric Tse, 2024-08-07 Free Imagination argues that the brain's capacity to imagine is the fundamental basis of human Free Will Laws of physics need not apply in our internal simulations so virtually anything is possible there And since some of our actions can follow from that which we imagine especially from processes of deliberation that involve imagining possible scenarios and outcomes our actions inherit the freedom of our imaginings The creative power of the human imagination may have evolved as a consequence of the demodularization of neural circuitry associated with volitional attentional operations over operands downloadable into a mental workspace where virtually anything could be combined with anything else This new cognitive architecture gave rise to the danger of psychosis Our schizotypal form of imagination arising from the promiscuous generative and iterative combination of disencapsulated operators and operands in a mental workspace may have evolved only in humans by exapting from existing motoric and other operations involved in volitional hand dexterity to a domain of premotoric simulation What we imagine into existence can be used for good or evil Imagination is therefore our greatest tool and weapon When applied to ourselves it allows us the possibility of reimagining and then transforming ourselves in light of second order desires This gives us the ability to choose to become a new kind of chooser in the future Other animals lack this second order Free Will although they can do otherwise they cannot want to become otherwise than they are making them amoral This book explores the idea that because humans in contrast have second order Free Will they can be moral or immoral
