This book analyses EU food law from a regulatory economic and managerial perspective. It presents an economic assessment of strategies of food safety regulation and discusses the different regulatory regimes in EU food law. It examines the challenges of food safety in the internal market as well as the regulatory tools that are available. The book's generic theorising and measurement of regulatory effects is supplemented by detailed analysis of key topics in food markets such as health claims enforcement strategies and induced risk management at the level of the organizations producing food. The regulatory effects discussed in the book range from classical regulatory analysis covering e.g. effects of ex ante versus ex post regulation and content related versus information related regulation to new regulatory options such as behavioral regulation. The book takes as its premise the idea that economic considerations are basic to the design and functioning of the European food supply arena and that economic effects consolidate or induce modification of the present legal structures and principles. The assessments, analyses and examination of the various issues presented in the book serve to answer the question of how economic theory and practice can explain and enhance the shaping and modification of the regulatory framework that fosters safe and sustainable food supply chains.

Governing Nano Foods: Principles-Based Responsive Regulation Bernd van der Meulen, Harry Bremmers, Kai Purnhagen, Nidhi Gupta, Hans Bouwmeester, L. Leon Geyer, 2014-01-13. Food which nanotechnology has impacted or to which nanotechnology is applied is referred to as nanofood. From treatment of the soil in which a crop plant is grown to the caring of a food, nanotechnology is a growing factor in the food supply. At this point, however, there is no definitive effective global method for regulating the use of nanotechnology as it relates to the food supply. Legislation on nanotechnologies is still evolving as is understanding what data is needed for effective, efficient and appropriate risk assessment associated with nanotechnology impacted foods. Due to the emerging nature of nanotechnology and its role in the food supply, case by case studies are the current norm, but the need for wide scale testing and broad based regulatory standards is urgent. This project is based on an EFFoST study designed to provide a comparative study of nanofood regulations in order to guide regulation development in this rapidly expanding market. Provides comparative study of nanofood regulations in order to guide regulation development in this rapidly expanding market. Includes both case by case examples and more broad based insights. Provides models for regulation specifically for regulating nanotechnology as applied to food.
