Designing

for Zero Waste Steffen Lehmann, Robert Crocker, 2013-07-03 Designing for Zero Waste is a timely topical and necessary publication Materials and resources are being depleted at an accelerating speed and rising consumption trends across the globe have placed material efficiency waste reduction and recycling at the centre of many government policy agendas giving them an unprecedented urgency While there has been a considerable literature addressing consumption and waste reduction from different disciplinary perspectives the complex nature of the problem requires an increasing degree of interdisciplinarity Resource recovery and the optimisation of material flow can only be achieved alongside and through behaviour change to reduce the creation of material waste and wasteful consumption This book aims to develop a more robust understanding of the links between lifestyle consumption technologies and urban development The British National Bibliography Arthur James Wells, 2009 Governing Complexity Andreas Thiel, Dustin E. Garrick, William A. Blomquist, 2019-10-03 This book explains why governance is polycentric and what that means in practice using examples of complex natural resource management **Advances in Marine Environmental Protection: Challenges, Solutions and Perspectives** Mehran Idris Khan, Yen-Chiang Chang, Wen-Hong Liu, 2025-04-29 Environments have no boundaries and no borders Managing oceanic environments particularly the threats and risks of pollution should also consider the shared responsibility of all coastal states Emerging issues for oceanic pollution governance include global changes like rising temperature ocean acidification but also disturbances of ecosystem functioning by plastic and pollution by other emerging contaminants for example noise pollution and deep sea mining These call for efficient and sustainable prevention and restoration strategies such as efficient urban and industrial sewage treatment plants efficiently administered transnational marine protected areas and among others sustainable aquaculture extensive small scale fisheries Environmental protection warrants the development of interrelationships between marine sciences relevant industries and ocean governance developing internationally accepted rules and regulations for sustainable ocean management This Research Topic will explore possible new domains of ocean governance and the marine environment from the interdisciplinary perspectives of the rule of law including the international agreement on equal conventions the Convention on Facilitation of International Maritime Traffic the Convention on the International Regulation for Preventing Collisions at Sea and International Convention for the Prevention of Pollution from Ships MARPOL **Polycentrism** Frank Gadinger, Jan Aart Scholte, 2023-05-03 This is an open access title available under the terms of a CC BY NC ND 4.0 International licence It is free to read at Oxford Academic and offered as a free PDF download from OUP and selected open access locations How does governing work today How does society mis handle pressing challenges such as armed violence cultural difference ecological degradation economic restructuring geopolitical shifts global pandemics migration flows and technological change in ways that are not democratic effective fair peaceful and sustainable This volume addresses these key questions with reference to the theme of polycentrism i.e. the idea that contemporary governing is dispersed fluctuating messy elusive and

headless Chapters develop this notion of polycentrism from the perspectives of a broad spectrum of academic disciplines and theoretical approaches offering comprehensive coverage of exciting new thinking about how today's world is misruled. The book identifies four paradigms of knowledge about polycentric governing: organizational, legal, relational, and structural, and pursues conversations across the divides that normally keep these approaches within separate research communities. These exceptional inter-paradigm exchanges focus particularly on issues of techniques, how governing is done, power, what forces drive governing, and legitimacy, whether governing is rightful. Comparisons between the multiple perspectives on polycentric governing highlight and help to clarify the distinctive emphases, potentials, and limitations of each approach. In addition, various combinations of the different theories generate promising novel avenues of thought about polycentrism. The book will allow readers to develop and refine their own understandings of governing today and hence to become more empowered political subjects.

Urban Resilience to Droughts and Floods Cecilia Tortajada, James Horne, Larry Harrington, 2020-05-21
This book focuses on policies and governance on how to build the resilience of cities to droughts and floods in the short, medium, and long term. There are discussions on how cities prepare for, cope with, learn from, manage, and recover from these extreme events. The chapters also consider aspects such as changing paradigms, policy responses under uncertainty, scenario development, institutional responses, adaptive forecasting, governance perspectives, infrastructure development, overall investments, and technological innovation. The Sustainable Development Goals (SDGs) and the Sendai Framework for Disaster Risk Reduction are discussed at length. Most of the cities and regions studied are in Asia; however, cities from Oceania, Europe, Africa, and North America are also included. Analyses are not limited to cities but to the basins and regions from which urban populations obtain their resources and on which their resilience depends. This book was originally published as a special issue of the International Journal of Water Resources Development.

Subnational Hydropolitics Scott Moore, 2018
It is often claimed that future wars will be fought over water. But while international water conflict is rare, it is common between subnational jurisdictions like states and provinces. Drawing on cases in the United States, China, India, and France, this book explains why these subnational water conflicts occur and how they can be prevented.

The Blue Compendium Jane Lubchenco, Peter M. Haugan, 2023-05-24
Home to over 80 percent of all life on Earth, the ocean is the world's largest carbon sink and a key source of food and economic security for billions of people. The relevance of the ocean for humanity's future is undisputed. However, the ocean's great potential to drive economic growth and equitable job creation, sustain healthy ecosystems, and mitigate climate change is not yet fully recognised. Lack of awareness of this potential, as well as management and governance challenges, pose impediments. Until these impediments are removed, ocean ecosystems will continue to be degraded, and opportunities for people lost. A transition and a clear path to a thriving and vibrant relationship between humans and the ocean are urgently needed. This open access collection of papers and reports identifies a path that is inspired by science, energised by engaged people, and emboldened by

visionary leaders These assessments of knowledge are commissioned by the High Level Panel for a Sustainable Ocean Economy Ocean Panel which was established in September 2018 as a unique initiative led by heads of state and government from around the world to showcase the latest leading edge science knowledge and state of the art thinking on key ocean issues Altogether The Blue Compendium offers innovative ocean solutions in technology policy governance and finance realms that could help accelerate a transition to a more sustainable and prosperous relationship with the ocean The comprehensive assessments have already informed policy making at the highest levels of government and motivated an impressive array of responsive and ambitious action across a growing network of leaders in business finance and civil society

Governing for Sustainability John C. Dernbach, Scott E Schang, 2023-05-10 Description Coming Soon **Governing Sustainability** Lennart Oestergaard, 2019 **Sustainability Governance and Hierarchy** Philippe Hamman, 2019-06-24 This book provides a solid theoretically and empirically grounded reflection on the concept of sustainability governance whose growing popularity in social science literature as well as among decision makers and governance actors may seem intriguing all the more so as it articulates together two vast fields of study that have sometimes been dismissed as vague or ideologically loaded In order to think together the concepts of sustainability and governance the book is organized around the exploration of hierarchy issues which often lie in the background of the existing literature but are not the focus of analysis To fill this gap the contributors are interested in the interactions between different scales and the way the issues are territorialized from a conceptual or a methodological point of view and considering ongoing practical experiments connected by a trans disciplinary questioning From this it appears that real world governance modes can often best be understood as combinations of hierarchical and non hierarchical approaches to sustainability governance and as permanent transactional processes between institutional regulations and social linkages This book will be of interest to advanced students and scholars focusing on governance issues sustainability studies environmental studies as well as on the methodological aspects of the social sciences economy geography law philosophy political science sociology urbanism and planning **Governance and Sustainability** David Crowther, Shahla Seifi, 2021-08-20 This book explores the concepts of sustainability and governance in relation to the governance of corporations hence the ubiquity of the term corporate governance and other bodies It examines how these concepts are regularly used by politicians and by the media The two concepts are however largely treated as being separate and discrete and given equal coverage The argument in this book is that the two concepts are inter related and that good governance is a prerequisite for sustainability The focus of the book therefore is different from most as it seeks to integrate these two important issues The approach used in this book is based on the tradition of the Social Responsibility Research Network a worldwide body of scholars that over its 20 year history has sought to broaden the discourse and to treat all research as inter related and business relevant The book examines diverse aspects of the changes to corporate and institutional behaviour that have recently manifested by focusing on these two aspects of sustainable

development Thus the authors explore engagement and partnership between organisations in order to consider the extent to which the focus has changed so much that we need to think about new approaches to our understanding of sustainability and differing effects in practice The international mix of authors makes this an original contribution sharing some of the best ideas from around the world *Governance and Sustainability* Ulrich Petschow, James Rosenau, Ernst Ulrich von Weizsäcker, 2017-09-29 Sustainability cannot be achieved without good governance The Johannesburg World Summit on Sustainable Development in 2002 stated that governance and sustainable development are intimately tied together and the future role and architecture of institutions from local to international levels will be crucial determinants to whether future policies and programmes for sustainable development will succeed But these are changing times With growing tensions over both globalization and regionalization traditional systems of regulation are being subjected to growing pressure for reform While states will continue to play a significant if changed role in the future the importance of players from business and civil society is increasing Sustainable development requires this change Such an intra and intergenerational concept cannot be achieved with a top down approach but rather needs the participation of all In fact the governance of sustainable development requires the exploration of new forms of both social co operation and confrontation By doing so the different levels global and local players state company and civil society control structures hierarchy market and public private and fields of action need to be taken into consideration Governance and Sustainability examines the possibilities of integrating the environmental social and economic dimensions of sustainable development within the framework of governance processes and how that might steer societies towards sustainability It takes a close look at the key actors their agendas and methods forms of organization problems and limits as well as real life examples for governance in different areas of society at the regional national and international level It is especially interested in exploring the nature of changes in the context of governance the role of actors in such processes and analysing how different forms of societal learning can improve governance processes It concludes that this is a continuous process characterized by conflicts and learning processes necessary to heighten both awareness of the complexity of the social and environmental problems faced and the prospects of implementing successful solutions Based on a major conference hosted to assess the issue of governance post Johannesburg the book includes innovative insights from some of the leading thinkers in both sustainable development and governance from academia business multilateral organizations and NGOs It provides a unique perspective on two of the key societal problems facing the world today *Sustain-ability?* ,2012 *Sustainability* Astrid Cerny, 2015-12-23 The anthology *Sustainability Global Issues Global Perspectives* gives readers a firm grounding in issues related to sustainability today The book is rooted in the idea that to achieve sustainability requires an understanding of many global topics and it uses global examples and case studies The readings are organized into three sections The first introduces major concepts and trends in environmental thinking the second identifies current challenges to sustainability and the third addresses paradigm shifts for

sustainability The selections are a blend of environmental science especially as it relates to agriculture soils and land management with social topics such as how to govern fairly and equitably to ensure that the voices of all seven billion of earth s inhabitants will be heard Specific topics include the global food economy environmentally sound landscaping waste management and human migration Figures and tables throughout the book provide visual support Forward looking the book discusses governance structures that work and what different countries are doing to reform their education systems to respond to sustainability issues Sustainability Global Issues Global Perspectives is intended for introductory or survey courses in environmental studies and global issues Astrid Cerny is a faculty member in the liberal studies program at New York University where she teaches environmental studies She holds a Ph D in geography from the University of Washington and her research interests include human environment interactions global food markets and food security migration and sustainability and human behavior She has extensive research experience in China Central Asia and Europe Dr Cerny s previous editorial work has been published in Research in Social Problems and Public Policy Volume 20 She has translated works from German to English published in peer reviewed journals as well as in Chinese Russian and Uzbek publications
