Kervaire, John Willard Milnor, 1961 **Lectures on Groups of Homotopy Spheres** Jerome Levine, 1971 *Modern Geometry - Methods and Applications* B. A. Dubrovin, Boris Anatol'evich Dubrovin, A. T. Fomenko, Sergei Petrovich Novikov, 1984 Part II The geometry and topology of manifolds This is the second volume of a three volume introduction to modern geometry with emphasis on applications to other areas of mathematics and theoretical physics Topics covered include homotopy groups fibre bundles dynamical systems and foliations The exposition is simple and concrete and in a terminology palatable to physicists **Compact Connected Lie Transformation Groups on Spheres with Low Cohomogeneity. II** Eldar Straume, 1997 The cohomogeneity of a transformation group italic capitals $G \times X$ is by definition the dimension of its orbit space italic c dim italic capitals $X \times G$ We are concerned with the classification of differentiable compact connected Lie transformation groups on homology spheres with italic c less than or equal to symbol 2 and the main results are summarized in five theorems A B C D and E in part I This paper is part II of the project and addresses theorems D and E D examines the orthogonal model from theorem A and orbit structures while theorem E addresses the existence of exotic italic capital G spheres *Current Trends in Transformation Groups* Anthony Bak, Masaharu Morimoto, Fumihiro Ushitaki, 2002-07-31 This book provides an overview of some of the most active topics in the theory of transformation groups over the past decades and stresses advances obtained in the last dozen years The emphasis is on actions of Lie groups on manifolds and CW complexes Manifolds and actions of Lie groups on them are studied in the linear semialgebraic definable analytic smooth and topological categories Equivalent vector bundles play an important role The work is divided into fifteen articles and will be of interest to anyone researching or studying transformations groups The references make it easy to find details and original accounts of the topics surveyed including tools and theories used in these accounts **The Geometry and Topology of Coxeter Groups** Michael W. Davis, 2025-07-30 This book now in a revised and extended second edition offers an in depth account of Coxeter groups through the perspective of geometric group theory It examines the connections between Coxeter groups and major open problems in topology related to aspherical manifolds such as the Euler Characteristic Conjecture and the Borel and Singer Conjectures The book also discusses key topics in geometric group theory and topology including Hopf's theory of ends contractible manifolds and homology spheres the Poincaré Conjecture and Gromov's theory of CAT 0 spaces and groups In addition this second edition includes new chapters on Artin groups and their Betti numbers Written by a leading expert the book is an authoritative reference on the subject Group Actions on Manifolds Reinhard Schultz, 1985 Presents an understanding of the sorts of problems one studies in group actions and the methods used to study such problems This book features articles based upon lectures at the 1983 AMS IMS SIAM Joint Summer Research Conference Group Actions on Manifolds held at the University of Colorado **Algebraic Topology,**

Wraith, 2015-10-14 This book studies certain spaces of Riemannian metrics on both compact and non compact manifolds These spaces are defined by various sign based curvature conditions with special attention paid to positive scalar curvature and non negative sectional curvature though we also consider positive Ricci and non positive sectional curvature If we form the quotient of such a space of metrics under the action of the diffeomorphism group or possibly a subgroup we obtain a moduli space Understanding the topology of both the original space of metrics and the corresponding moduli space form the central theme of this book For example what can be said about the connectedness or the various homotopy groups of such spaces We explore the major results in the area but provide sufficient background so that a non expert with a grounding in Riemannian geometry can access this growing area of research *Complex Cobordism and Stable Homotopy Groups of Spheres* Douglas C. Ravenel, 2023-02-09 Since the publication of its first edition this book has served as one of the few available on the classical Adams spectral sequence and is the best account on the Adams Novikov spectral sequence This new edition has been updated in many places especially the final chapter which has been completely rewritten with an eye toward future research in the field It remains the definitive reference on the stable homotopy groups of spheres The first three chapters introduce the homotopy groups of spheres and take the reader from the classical results in the field though the computational aspects

of the classical Adams spectral sequence and its modifications which are the main tools topologists have to investigate the homotopy groups of spheres Nowadays the most efficient tools are the Brown Peterson theory the Adams Novikov spectral sequence and the chromatic spectral sequence a device for analyzing the global structure of the stable homotopy groups of spheres and relating them to the cohomology of the Morava stabilizer groups These topics are described in detail in Chapters 4 to 6 The revamped Chapter 7 is the computational payoff of the book yielding a lot of information about the stable homotopy group of spheres Appendices follow giving self contained accounts of the theory of formal group laws and the homological algebra associated with Hopf algebras and Hopf algebroids The book is intended for anyone wishing to study computational stable homotopy theory It is accessible to graduate students with a knowledge of algebraic topology and recommended to anyone wishing to venture into the frontiers of the subject

Algebraic Transformation Groups Kraft, 2012-12-06 In recent years there has been increasing interest and activity in the area of group actions on affine and projective algebraic varieties Techniques from various branches of mathematics have been important for this study especially those coming from the well developed theory of smooth compact transformation groups It was timely to have an interdisciplinary meeting on these topics We organized the conference Topological Methods in Algebraic Transformation Groups which was held at Rutgers University 4-8 April 1988 Our aim was to facilitate an exchange of ideas and techniques among mathematicians studying compact smooth transformation groups algebraic transformation groups and related issues in algebraic and analytic geometry The meeting was well attended and these Proceedings offer a larger audience the opportunity to benefit from the excellent survey and specialized talks presented The main topics concerned various aspects of group actions algebraic quotients homogeneous spaces and their compactifications The

meeting was made possible by support from Rutgers University and the National Science Foundation We express our deep appreciation for this support We also thank Annette Neuen for her assistance with the technical preparation of these Proceedings Graphs and Patterns in Mathematics and Theoretical Physics Mikhail Lyubich, Leon Armenovich Takhtadzhian, 2005 The Stony Brook Conference Graphs and Patterns in Mathematics and Theoretical Physics was dedicated to Dennis Sullivan in honor of his sixtieth birthday The event's scientific content which was suggested by Sullivan was largely based on mini courses and survey lectures The main idea was to help researchers and graduate students in mathematics and theoretical physics who encounter graphs in their research to overcome conceptual barriers The collection begins with Sullivan's paper Sigma models and string topology which describes a background algebraic structure for the sigma model based on algebraic topology and transversality Other contributions to the volume were organized into five sections Feynman Diagrams Algebraic Structures Manifolds Invariants and Mirror Symmetry Combinatorial Aspects of Dynamics and Physics These sections along with more research oriented articles contain the following surveys Feynman diagrams for pedestrians and mathematicians by M Polyak Notes on universal algebra by A Voronov Unimodal maps and hierarchical models by M Yampolsky and Quantum geometry in action big bang and black holes by A Ashtekar This comprehensive volume is suitable for graduate students and research mathematicians interested in graph theory and its applications in mathematics and physics
