Setting the Standards for Haptic and Tactile Interactions: ISO's Work

Jan B.F. van Erp¹, Ki-Uk Kyung², Sebastian Kassner³, Jim Carter⁴, Stephen Brewster⁵, Gerhard Weber⁶, and Ian Andrew⁷

Abstract. Tactile and haptic interaction is becoming increasingly important and ergonomic standards can ensure that systems are designed with sufficient concerns for ergonomics and interoperability. ISO (through working group TC159/SC4/WG9) is working toward international standards, which are being dual-tracked as both ISO and CEN standards. This paper gives an update on the status of the work in progress and the recently published International Standard on tactile/haptic interactions. Active involvement of experts is sought for work on terms and definitions and measures to characterize devices and operator capabilities.

Keywords: guidelines, haptics, human computer interaction, standards, tactile.

1 Introduction

Ergonomic standards go beyond providing consistency and interoperability. They help enhance usability in a number of ways including: improving effectiveness and avoiding errors, improving performance, and enhancing the comfort and well-being of users. Ergonomic standards provide a basis for analysis, design, evaluation, procurement, and even for arbitrating issues of international trade. Material providing guidance on the design and use of tactile and haptic interactions is sparse [1, 2]. Therefore, an ISO expert group has been working on standards documents for haptic interaction since 2005. ISO TC159/SC4/WG9 reported on its progress at several conferences

Responsive Polymer Surfaces Danqing Liu, Dirk J.**
Broer, 2017-07-20 Adopting an integrated approach this book covers experiments theory and emerging applications. In the first part surfaces are described that change from flat to either a random corrugated or to a well structured structure while the second part deals with those surface structures integrated in the coating surface where the structures change their shape or dimension when addressed by an external trigger A variety of materials are addressed including liquid crystal polymers hydrogels hard acrylates and soft silicones. The whole is rounded off by a discussion of various applications.

Engineering Haptic Devices Christian Hatzfeld, Thorsten A. Kern, 2014-09-15 In this greatly reworked second edition of Engineering Haptic Devices the psychophysic content has been thoroughly revised and updated Chapters on haptic interaction system structures and design methodology were rewritten from scratch to include further basic principles and recent findings New chapters on the evaluation of haptic systems and the design of three exemplary haptic systems from science and industry have been added This book was written for students and engineers that are faced with the development of a task specific haptic system It is a reference book for the basics of haptic interaction and existing haptic systems and methods as well as an excellent source of information for technical questions arising in the design process of systems and components Divided into two parts part 1 contains typical application areas of haptic systems and a thorough analysis of haptics as an interaction modality. The role of the user in the design of haptic systems is discussed and relevant design and development stages are outlined Part II presents all relevant problems in the design of haptic systems including general system and control structures kinematic structures actuator principles and sensors for force and kinematic measures Further chapters examine interfaces and software development for virtual reality simulations *Haptics: Understanding Touch;* Technology and Systems; Applications and Interaction Hiroyuki Kajimoto, Pedro Lopes, Claudio Pacchierotti, Cagatay Basdogan, Monica Gori, Betty Lemaire-Semail, Maud Marchal, 2024-11-02 The two volume set LNCS 14768 14769 constitutes the refereed proceedings of the 14th International Conference on Human Haptic Sensing and Touch Enabled Computer Applications EuroHaptics 2024 held in Lille France during June 30 July 3 2024 The 81 full papers presented were carefully reviewed and selected from 142 submissions They were organized in topical sections as follows understanding touch technology and systems applications and interaction The Connected Home: The Future of Domestic Life Richard Harper, 2011-12-08 The title of this new book The Connected Home reflects the move away from the idea that smart homes would alter the lives of those living in them by providing technologies to take over tasks that were previously the responsibility of the householder such as managing entertainment education and even eating Up until around 10 years ago this view was commonplace but time has shown that the technologies to support a smart home have not developed in such a way as to support this premise Instead what people do in their homes has moved the concept of a smart home into that of the connected home The rise of on line games technologies video connections via Skype social networking internet browsing etc are now an integral part of the home environment and have had a significant effect on the home The contributors to this exciting new book consider and discuss the effects and ramifications of the connected home from a variety of viewpoints an examination of the take up of personal computers and the Internet in domestic situations an analysis of the changing intersection of technology and human habits in the connected home the impact of gaming texting e book readers tablets and other devices and their effect on the social conditions of a household the relationship between digital messaging applications and real geography and an overview of how sensing technologies for the smart home might evolve lightweight medical

technologies for example The book culminates by addressing unfinished ambitions from the smart home agenda the factors that have prevented their realisation and addresses the need for extending research into the area Haptics: Neuroscience, Devices, Modeling, and Applications Malika Auvray, Christian Duriez, 2014-10-14 The two volume set LNCS 8618 and 8619 constitutes the refereed proceedings of the 9th International Conference EuroHaptics 2014 held in Versailles France in June 2014 The 118 papers 36 oral presentations and 82 poster presentations presented were carefully reviewed and selected from 183 submissions Furthermore 27 demos were exhibited each of them resulting in a short paper included in the volumes These proceedings reflect the multidisciplinary nature of EuroHaptics and cover topics such as human computer interaction human robot interactions neuroscience perception and psychophysics biomechanics and motor control modelling and simulation and a broad range of applications in medicine rehabilitation art and design Hand Preference and Hand Ability Miriam Ittyerah, 2013-09-18 This volume adds new dimension and organization to the literature of touch and the hand covering a diversity of topics surrounding the perception and cognition of touch in relation to the hand No animal species compare to humans with regard to the haptic or touch sense so unlike visual or auditory cognition we know little about such haptic cognition. We do know that motor skills play a major role in haptics but senses like vision do not determine hand preference or hand ability It seems also that the potential ability to perform a task may be present in both hands and evidence indicates that the hand used to perform tactile tasks in blind or in sighted conditions is independent of one s hand preference This book will be useful for those in education and robotics and can serve as a general text focusing on touch and Making Sense of Haptics Femke Elise van Beek, 2018-01-05 Tele operation systems in which developmental psychology robots are controlled remotely are a potential solution to performing tasks in remote small and hazardous environments However there is a big disadvantage to these systems as the direct connection between the human and the environment is lost and operators are deprived of their sense of touch The recreation of touch feedback through haptic devices is a possible solution however haptic devices are far from perfect and improving their design is usually a slow trial and error process This book describes 7 scientific studies that try to break this slow loop by using a deductive approach Through investigating fundamental properties of human haptic perception using psychophysical paradigms general knowledge on haptic perception of force position movement and hardness was gained The resulting information can be applied to many different haptic devices Consequently haptic systems can be more easily designed in an intuitive human centered way Engineering Haptic Devices Thorsten A. Kern, Christian Hatzfeld, Alireza Abbasimoshaei, 2022-11-05 This is an open access book In this third edition of Engineering Haptic Devices the software part was rewritten from scratch and now includes even more details on tactile and texture interaction modalities. The kinematics section was improved to extend beyond a pure knowledge explanation to a comprehensive guideline on how to actually do and implement haptic kinematic functions The control section was reworked incorporating some hands on experience on control implementation on haptic systems. The system

actuator and sensor design chapters were updated to allow easier access to the content This book is written for students and engineers faced with the development of a task specific haptic system Now 14 years after its first edition it is still a reference for the basics of haptic interaction and existing haptic systems and methods as well as an excellent source of information for technical questions arising in the design process of systems and components Following a system engineering approach it is divided into two parts with Part I containing background and reference information as a knowledge basis Typical application areas of haptic systems and a thorough analysis of haptics as an interaction modality are introduced The role of users in the design of haptic systems is discussed and relevant design and development stages are outlined Part II presents all related challenges in the design of haptic systems including general system architecture and control structures kinematics actuator principles and all types of sensors you may encounter doing haptic device development Beside these hardware and mechanical topics further chapters examine state of the art interfaces to operate the devices and hardware and software development to push haptic systems to their limits Multisensory Softness Massimiliano Di Luca, 2014-07-23 Offers a unique multidisciplinary overview of how humans interact with soft objects and how multiple sensory signals are used to perceive material properties with an emphasis on object deformability. The authors describe a range of setups that have been employed to study and exploit sensory signals involved in interactions with compliant objects as well as techniques to simulate and modulate softness including a psychophysical perspective of the field Multisensory Softness focuses on the cognitive mechanisms underlying the use of multiple sources of information in softness perception Divided into three sections the first Perceptual Softness deals with the sensory components and computational requirements of softness perception the second Sensorimotor Softness looks at the motor components of the interaction with soft objects and the final part Artificial Softness focuses on the identification of exploitable guidelines to help replicate softness in artificial environments

Quantifying Quality Aspects of Multimodal Interactive Systems Christine Kühnel, 2012-06-07 This book systematically addresses the quantification of quality aspects of multimodal interactive systems. The conceptual structure is based on a schematic view on human computer interaction where the user interacts with the system and perceives it via input and output interfaces. Thus aspects of multimodal interaction are analyzed first followed by a discussion of the evaluation of output and input and concluding with a view on the evaluation of a complete system.
