The embedded system developers are filled with consequence of missed deadlines and huge cost overruns Embedded system developers can benefit from high quality design flow by identifying optimal product architecture and executing a high quality design process Embedded software development tools are also vitally important for productive development and keeping development in control The purpose of writing this software design process flow is to ensure that by following a high quality process and right set of development tools the developers shall possess the highest quality of products while maintaining a competitive schedule and a lower cost structure Book Contents
