Hardwired Behavior Laurence R. Tancredi, 2005 This book is concerned with the advances from research of the human brain as it informs us on how we make moral decisions It examines the role of genetics and early changes in brain biology and the environmental factors that supplement brain biology to trigger moral versus immoral decision making Hardwired Behavior Laurence Tancredi, 2005-09-19 This book explores the impact of neuroscience research over the past 20 or more years on brain function as it affects moral decisions It sets out the historical framework of the transition from mentalism to physicalism shows how the physical brain works in moral decisions and then examines three broad areas of moral decision making the brain in bad acts the brain in decisions involving sexual relations and the brain in money decision making

Morality: A Natural History Roger V. Moseley, 2019-10-17 What is morality and what is the source of our moral ideas Philosophers have explored these questions for centuries suggesting that both emotion and reason play roles but failing to explain how and why Homo sapiens developed these ideas Author Roger Moseley argues that evolutionary forces that optimize human welfare provide the missing explanation Morality A Natural History presents a multi disciplinary analysis of the topic and reveals a common thread among the seemingly diverse fields of religion neuroscience experimental psychology and game theory child development evolution and animal behavior and anthropology and sociology When humans first appeared a simple self interested survival morality sufficed As societies became more complex however rules of behavior became necessary to limit conflict and promote cooperation The brain evolved producing language that allowed the articulation of moral ideas which were codified and enforced by religion and social forces No species lasts forever and it is at our peril today that we neglect those evolved moral values of cooperation altruism truthfulness and empathy Rooted in scientific evidence and interspersed with personal anecdotes and humorous observations Moseley provides a unique perspective on the natural history of morality how it appeared evolved and continues to evolve today Morality A Natural History is essential reading for academics and laypersons alike who seek to understand the origin and essence of human morality *Reinforcement Sensitivity Theory* Anthony Walsh, 2018-10-17 Some of the brightest minds in criminology who were nurtured on the strictly environmentalist paradigm of the 20th century have declared that biosocial criminology is the paradigm for the 21st century This book attempts to unite this ever growing field with the premier neurobiological theory of personality otherwise known as reinforcement sensitivity theory RST Anthony Walsh places the highly variable number of biosocial approaches under a single theoretical umbrella whilst providing a unique integrative framework As the leading neurobiological theory of personality and behavior in psychology today RST focuses around the age old question of how naturally selfish social animals can achieve their wants and needs without alienating others in their social groups RST posits that evolution has built into humans three interacting systems the behavioral approach system the behavioral inhibition system and the fight flight freeze system RST identifies the neurobiological and genetic functions underlying each system

and has found a cascade of supporting evidence Throwing new light on many areas of concern to criminologists such as psychopathy violence ADHD and schizophrenia this book will be of interest to scholars and upper level students in the field Additional features such as Focus Boxes and diagrams delve into measurement techniques and brain areas Sustainability Analysis S. Shmelev, I. Shmeleva, 2012-01-27 Sustainability Analysis provides a detailed exploration of current environmental thinking from a variety of perspectives including institutional and psychological angles Primarily focusing on macroeconomic policies and green national accounting this book provides a strong basis for further study in sustainable development

Wild Justice Marc Bekoff, Jessica Pierce, 2024-05-31 A compelling case that humans are not the only species with moral intelligence based on years of research into animal behavior Discover Scientists have long counseled against interpreting animal behavior in terms of human emotions warning that such anthropomorphizing limits our ability to understand animals as they really are Yet what are we to make of a female gorilla in a German zoo who spent days mourning the death of her baby Or a wild female elephant who cared for a younger one after she was injured by a rambunctious teenage male Or a rat who refused to push a lever for food when he saw that doing so caused another rat to be shocked Aren't these clear signs that animals have recognizable emotions and moral intelligence With Wild Justice Marc Bekoff and Jessica Pierce unequivocally answer yes Marrying years of behavioral and cognitive research with compelling and moving anecdotes Bekoff and Pierce reveal that animals exhibit a broad repertoire of moral behaviors including fairness empathy trust and reciprocity Underlying these behaviors is a complex and nuanced range of emotions backed by a high degree of intelligence and surprising behavioral flexibility Animals in short are incredibly adept social beings relying on rules of conduct to navigate intricate social networks that are essential to their survival Ultimately Bekoff and Pierce draw the astonishing conclusion that there is no moral gap between humans and other species morality is an evolved trait that we unquestionably share with other social mammals Sure to be controversial Wild Justice offers not just cutting edge science but a provocative call to rethink our relationship with and our responsibilities toward our fellow animals This well thought out provocative work will give scientific and lay readers plenty of examples to rethink and open new paths of research into the lives and minds of animals Choice I will never be able to look at a dog or a cat or a cow or a coyote for that matter in the same way again Telegraph An excellent introduction to a new science Booklist

Handbook of the Sociology of Morality Steven Hitlin, Stephen Vaisey, 2010-10-17 Human beings necessarily understand their social worlds in moral terms orienting their lives relationships and activities around socially produced notions of right and wrong Morality is sociologically understood as more than simply helping or harming others it encompasses any way that individuals form understandings of what behaviors are better than others what goals are most laudable and what proper people believe feel and do Morality involves the explicit and implicit sets of rules and shared understandings that keep human social groups intact Morality includes both the shoulds and should nots of human activity its proactive and inhibitive elements At one time sociologists were centrally concerned with morality

issues like social cohesion values the goals and norms that structure society and the ways individuals get socialized to reproduce those concerns In the last half century however explicit interest in these topics has waned and modern sociology has become uninterested in these matters and morality has become marginalized within the discipline But a resurgence in the topic is happening in related disciplines psychology neurology philosophy and anthropology and in the wider national discourse Sociology has much to offer but is not fully engaged in this conversation Many scholars work on areas that would fall under the umbrella of a sociology of morality but do not self identify in such a manner nor orient their efforts toward conceptualizing what we know and should know along these dimensions The Handbook of the Sociology of Morality fills a niche within sociology making explicit the shared concerns of scholars across the disciplines as they relate to an often overlooked dimension of human social life It is unique in social science as it would be the first systematic compilation of the wider social structural cultural cross national organizational and interactional dimension of human moral understood broadly thought feeling and behavior

The Neurobiology of Criminal Behavior Anthony Walsh, Jonathan D. Bolen, 2016-03-03 The main feature of this work is that it explores criminal behavior from all aspects of Tinbergen's Four Questions Rather than focusing on a single theoretical point of view this book examines the neurobiology of crime from a biosocial perspective It suggests that it is necessary to understand some genetics and neuroscience in order to appreciate and apply relevant concepts to criminological issues Presenting up to date information on the circuitry of the brain the authors explore and examine a variety of characteristics traits and behavioral syndromes related to criminal behavior such as ADHD intelligence gender the age crime curve schizophrenia psychopathy violence and substance abuse This book brings together the sociological tradition with the latest knowledge the neurosciences have to offer and conveys biological information in an accessible and understanding way It will be of interest to scholars in the field and to professional criminologists

Atoms of Mind W.R. Klemm, 2011-04-20 This book describes the author's view of how the mind thinks at various levels of operation These levels include nonconscious mind as in spinal brainstem reflexes and neuroendocrine controls subconscious mind and conscious mind In the attempt to explain conscious mind there is considerable critique of arguments over whether or not free will is an illusion Finally the author summarizes current leading theories for consciousness Bayesian probability chaos and quantum mechanics and then presents his own theory based on patterns of nerve impulses in circuits that are interlaced coherently into larger networks

The Big Question Alister McGrath, 2024-03-26 McGrath calls for a full bodied humanism invigorated by both scientific reasoning and religious devotion Profound engagement with life defining issues Booklist Richard Dawkins's groundbreaking book *The God Delusion* created an explosion of interest in the relation of science and faith This often troubled relationship between science and religion was seemingly damaged by the rise of the New Atheism which insisted that science had essentially disproved not just God but also the value of religion There is increasing skepticism towards its often glib and superficial answers and the big questions about faith God and science haven't gone

away in fact we seem to talk about them more than ever Alister McGrath's *The Big Question* is an accessible engaging account of how science relates to faith exploring how the working methods and assumptions of the natural sciences can be theologically useful McGrath uses stories and analogies as well as personal accounts in order to help readers understand the scientific and theological points he makes and grasp their deeper significance An extremely accomplished scientist and scholar McGrath criticizes the evangelism of the New Atheists and paves a logical well argued road to the compatibility between science and faith Some of his main discussion points include There is much more convergence between science and faith than is usually appreciated How the three great models of scientific explanation can be adapted to religious belief Belief in God provides a big picture of reality making sense of science's successes Another deeply felt entry on two divergent yet ultimately compatible ways of engaging the world and understanding reality Kirkus Reviews **The Bloomsbury**

reject various theoretical perspectives *Institutions and Sustainability* Volker Beckmann, Martina Padmanabhan, 2009-02-07 From the first vague idea to use Konrad Hagedorn's 60th birthday as an inspiration for taking stock of his vibrant academic contributions this joint book project has been a great pleasure for us in many ways Pursuing Hagedorn's intellectual development we have tried to reflect on the core questions of humanity according to Ernst Bloch Who are we Where do we come from and Where are we heading In this way and without knowing it Konrad Hagedorn initiated a collective action process he would have very much enjoyed if he had been allowed to take part in it But it was our aim and constant motivation to surprise him with this collection of essays in his honour Konrad Hagedorn was reared as the youngest child of a peasant family on a small farm in the remote moorland of East Frisia Germany During his childhood in the poverty ridden years after the Second World War he faced a life where humans were heavily dependent on using nature around them for their livelihoods meanwhile he learned about the fragility of the environment As a boy he tended a one room schoolhouse where his great intellectual talents were first recognised and used for co teaching his schoolmates These early teaching experiences might have laid the foundations for his later becoming a dedicated lecturer and mentor Human Nature Greg Clydesdale, 2016-05-13 Humans are weird They can be emotional irrational and often unpredictable yet as their manager it is your job to get the best out of them In fact they are often the key to your success Sadly humans do not come with an instruction manual which lists their technical specifications Human Nature by Greg Clydesdale is based on the premise that the key to good management is understanding human nature and interpersonal relations But what is human nature Greg argues that even where human nature is addressed at a conceptual level the link between theory and what actually happens in the workplace is usually weak and often fails to recognize that social ability is probably the defining aspect It is his intense focus on human nature and the link between a theoretical understanding of it and what actually happens in the workplace that makes this book so valuable Throughout the book you see how managers must constantly make balancing acts between conflicting forces that exist at any given time But the essential message is If you want to make the World a better place focus on being a better manager to your staff To help with this you will find an elaboration theory based approach in which a basic model is provided and then elaborated on with examples from the work place The model consists of twenty human characteristics placed in three categories emotion motivation and cognition These characteristics are then linked to what managers have to do in the workplace Revisiting Psychology Jared M. Bartels, William E Herman, 2018-11-16 This textbook presents overviews of 12 landmark studies in psychology from diverse areas of research such as consciousness developmental psychology learning memory social psychology and psychopathology Through a range of critical thinking exercises and reflective questions students can evaluate the methodology and impact of these classic studies and quickly hone their analytical and critical thinking skills Accessible clearly structured and written with undergraduate students in mind this book will make essential reading for any psychology course **Body, Soul, and Human Life (Studies in**

Theological Interpretation) Joel B. Green, 2008-07-01 Are humans composed of a material body and an immaterial soul This view is commonly held by Christians yet it has been undermined by recent developments in neuroscience Exploring what Scripture and theology teach about issues such as being in the divine image the importance of community sin free will salvation and the afterlife Joel Green argues that a dualistic view of the human person is inconsistent with both science and Scripture This wide ranging discussion is sure to provoke much thought and debate Bestselling books have explored the relationship between body mind and soul Now Joel Green provides us with a biblical perspective on these issues
