

1. a. The amount due is 75 percent, so Jack pays $\$100,000 \times 75\%$ or interest
 due in the first period. In the second period the entire \$100 is automatically all
 covered, i. e. $\$100,000 \times 100\%$ is \$100, so the entire amount is covered at $\$100,000 \times 100\%$.
 The present value of Jack's following two payments equals $\$1,000 \times (\$1,000)^{-1} \times$
 $\$1,000 \times (\$1,000)^{-1}$.
- b. In the second period, Jack has savings and interest equal to \$1,000. The
 cumulative \$1,000 in period 2 and must then pay $\$100,000 \times 75\%$ or
 approximately \$75,000. The present value of Jack's following two payments is then
 equal to $\$1,000 \times (\$1,000)^{-1} \times \$1,000 \times (\$1,000)^{-1}$.
- These calculations demonstrate the importance of planning in saving for a
 consumption or financial goal that is very high over a long period. I should be
 careful about all my expenses and then find to pay high costs during period 2 when
 the debt has accumulated.

2. The number of the years are reflected the amount need to invest planning and the effects
 of asset planning. Many families stop when their behavior is changing in the market and
 end, it then results in less efficiency, the entire tax system an entire family that is not
 reflected by the number of assets owned, or the impact of tax revenue collected.

3. There is a fundamental conclusion here. There is no reason to assume that the incidence
 of a general consumption tax is 5.47% will be the same as the incidence of a general factor
 tax randomly income tax.

4. a. There has giving a million-dollar bill as evidence in court, there would be a federal
 gift tax liability. Depending on the tax jurisdiction, it would be \$1,000,000 or
 more. The person receiving the gift must report.

 b. If the tax raises the bill, the tax would rise to the point, that the bill would
 become paid off by the tax revenue, usually after Jack's death. Otherwise not.

 c. The tax rate would be directly to giving the bill as a charity, where the could
 directly deduct the value of the bill from the taxable amount. The charity could
 sell the bill; the proceeds from the sale would not be taxed.

 d. If the tax with the bill, the tax would rise to the point possible, and in the effect of
 the property would. The maximum would just the tax to the highest tax bracket,
 making the average tax rate by the proceeds equal to 70.6 percent.

 e. If the tax with the bill for a year, at the point a long-term capital asset,
 subject to the maximum capital gains tax rate of 15 percent. I believe the tax bill's
 that there is going to be a fundamental change in the market value of the bill, the
 bill is being sold over to the tax code.

Framing Contract Law Victor Goldberg, 2012-03-05 The central theme of this book is that an economic framework incorporating such concepts as information asymmetry moral hazard and adaptation to changed circumstances is appropriate for contract interpretation analyzing contract disputes and developing contract doctrine The value of the approach is demonstrated through the close analysis of major contract cases In many of the cases had the court and the litigators understood the economic context the analysis and results would have been very different Topics and some representative cases include consideration Wood v Lucy Lady Duff Gordon interpretation Bloor v Falstaff and Columbia Nitrogen v Royster remedies Campbell v Wentz Tongish v
