web bending moment which are transferred into foundations it requires proper design of a column base in the case of small values of bending moments usually a simple base plate with suitable thickness is sufficient calculation of column bases with such geometry is shown in eurocode 3 1

web fixed baseplate design user manual download sample report open calculation the scope of this calculation module is to design fixed base plate for uniaxial moments and axial loads transferred from steel column to foundation concrete with or without stiffener plates axial load can either be tensile or compressive in nature

stiffeners steelconstruction info - Apr 11 2023

web stiffeners are secondary plates or sections which are attached to beam webs or flanges to stiffen them against out of plane deformations almost all main bridge beams will have stiffeners however most will only have transverse web stiffeners i.e. vertical stiffeners attached to the web deep beams sometimes also have longitudinal web stiffeners
