introduction of automatic machines and automation industrial manufacturing of machines and their parts for the key industries were made though manually operated machines Due to this manufacturers could not make complex profiles or shapes with high accuracy As a result the production rate tended to be slow production costs were very high rejection rates were high and manufacturers often could not complete tasks on time Industry was boosted by the introduction of the semi automatic manufacturing machine known as the NC machine which was introduced in the 1950 s at the Massachusetts Institute of Technology in the USA After these NC machine started to be used typical profiles and complex shapes could get

produced more readily which in turn lead to an improved production rate with higher accuracy Thereafter in the 1970 s an even larger revolutionary change was introduced to manufacturing namely the use of the CNC machine Computer Numerical Control Since then CNC has become the dominant production method in most manufacturing industries including automotive aviation defence oil and gas medical electronics industry and the optical industry Basics of CNC Programming describes how to design CNC programs and what cutting parameters are required to make a good manufacturing program The authors explain about cutting parameters in CNC machines such as cutting feed depth of cut rpm cutting speed etc and they also explain the G codes and M codes which are common to CNC The skill set of CNC program writing is covered as well as how to cut material during different operations like straight turning step turning taper turning drilling chamfering radius profile profile turning etc In so doing the authors cover the level of CNC programming from basic to industrial format Drawings and CNC programs to practice on are also included for the reader

From Raw Cutting Toward Precision Machining Peter H.-T. Liu, 2025-11-11 *From Raw Cutting Toward Precision Machining* builds on the author s earlier book *Versatility of Waterjet Technology* and chronicles the evolution of waterjet machining from crude cutting to a high precision manufacturing process Spanning five decades of innovation it highlights the people ideas and milestones that shaped this versatile technology At its core the book honors Dr John Olsen whose pioneering work in high pressure waterjets laid the foundation for transformative advances Several chapters explore his pivotal role including the development of compact affordable systems for precision and micro machining The Pacific Northwest s leadership in high pressure hardware intelligent control software and abrasive waterjet systems is also featured prominently In addition to technical breakthroughs the book examines how marketing education and collaboration helped transform waterjets from niche equipment into essential global manufacturing tools Blending historical insight technical depth and personal reflection this is essential reading for engineers educators and anyone curious about the evolution of the manufacturing technology
