

2. STARTING SYSTEM

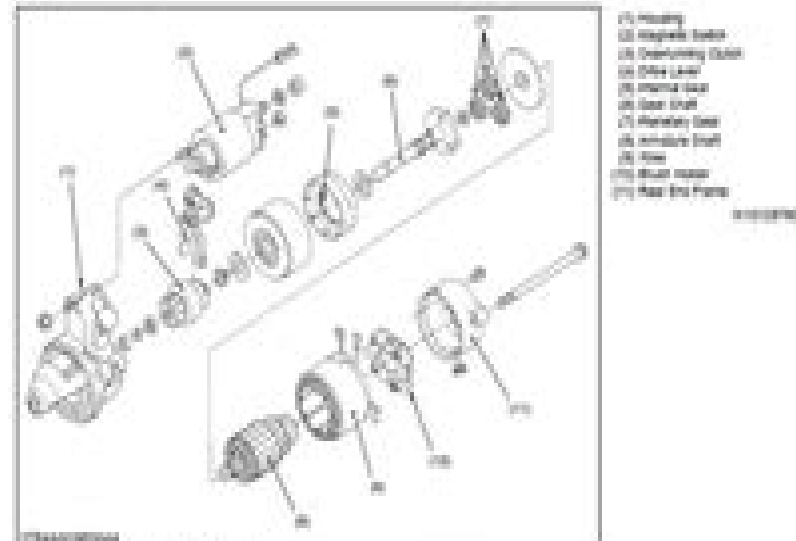

When the main switch is turned to the **PREHEAT** position, the terminal 30 is connected to the terminals 18 and 32. The glow plugs become heated, and at the same time, the pre-heat indicator lamp also lights on.

When the main switch is then turned to the **START** position with the safety switches on, the terminal 30 is connected to the terminal 38 and 32. Consequently, battery current flows to the starter motor and start the engine.

The main switch automatically returns to the **ON** position, the terminal 30 is connected only to the terminal 32, thereby causing the starting circuit to be opened, stopping the starter motor.

When the main switch turned from the **ON** position to the **OFF** position, the fuel cut-off solenoid moves the fuel injection pump control rack to the "No Fuel Injection" position and stop the engine.

(1) STARTER

The starter is a reduction type. The reduction system is used planetary gears, and the speed of gear shaft (2) is reduced to approximately one fifth of the armature shaft (8).
