Cirrhosis and Its Complications, Volume II Xingshun Qi,Andrea Mancuso,Thierry Thévenot,Yufu Tang, Hao Wu,2025-05-14 Given the success of Research Topic *Treatment and Prognostic Assessment of Liver Cirrhosis and Its Complications* and the rapidly evolving subject area we are pleased to announce the launch of Volume II About 2 million deaths worldwide annually are attributable to liver diseases Among them half die from cirrhosis and the other half from viral hepatitis and hepatocellular carcinoma When patients with liver cirrhosis develop to the decompensated stage a variety of complications will occur such as ascites spontaneous bacterial peritonitis variceal bleeding hepatic encephalopathy

hepatorenal syndrome and jaundice which will seriously affect the patient's quality of life with reduced survival time and increased socioeconomic burden. Therefore, early assessment and clinical management of cirrhosis and its complications are crucial for both clinicians and patients.

Recent Advances in the Understanding of Hepatocellular Carcinogenesis, 2nd edition Prasanna K. Santhekadur, Bubu Ama Banini, Rohini Mehta, 2024-09-19

Hepatocellular carcinoma (HCC) is the most common cancer of the liver and the third most cause of cancer-related deaths worldwide. The 5-year survival of HCC is less than 20%, making HCC the second most lethal malignancy, the first being pancreatic cancer. HCC usually occurs in patients with chronic liver disease in association with a variety of risk factors including chronic liver infection with hepatitis B virus or hepatitis C virus, excessive consumption of alcohol, overeating, obesity, and nonalcoholic fatty liver disease, other metabolic liver diseases including Wilson's disease, hemochromatosis, and alpha 1 antitrypsin deficiency, and environmental toxins such as aflatoxins. Tobacco use and human immunodeficiency virus infection also increases the risk of HCC. The heterogeneity of HCC associated with different etiologies affects tumor initiation, development, and progression, thus limiting the identification of consistent or routinely occurring genetic abnormalities characteristic of this malignancy. Nevertheless, sustained inflammation, hepatocyte regeneration, and apoptosis occurring in chronic liver disease results in fibrosis and ultimately cirrhosis, favoring genetic and epigenetic modifications that lead to the formation of dysplastic nodules and eventually oncogenesis. Identification of novel diagnostic and prognostic biomarkers for HCC is an unmet need in this current era. The aim of this Research Topic is to provide insights on novel aspects of HCC diagnosis, prognostication, and therapy, with an emphasis on recent and up-to-date findings from the scientific literature. Genetic and molecular signatures arising from HCC in association with specific etiologies and implications for cancer screening and surveillance will be discussed. As indicated, sub-topics listed below: Original articles, Reviews, and Mini Review articles will address all areas of HCC relevant not only to basic and clinical researchers but also to practitioners in various fields of medicine.

- 1 Epidemiology of Hepatocellular carcinoma
- 2 Risk factors for hepatocellular carcinoma
- 3 Nonalcoholic Fatty Liver Disease and Hepatocellular Carcinoma
- 4 Animal models for studying hepatocellular carcinoma
- 5 Hepatocellular Carcinoma Oncogenes
- 6 Tumor suppressors and Novel regulators of Hepatocellular Carcinoma
- 7 MicroRNA and Hepatocellular Carcinoma
- 8 Circulating biomarkers of Hepatocellular Carcinoma

Clinical Update on Inflammatory Disorders of the Gastrointestinal Tract Julia Mayerle, Herbert Tilg, 2010

Digestive disease-associated mortality accounts for a major part of all deaths in Western societies, and inflammatory diseases such as GI infections, viral hepatitis, GERD, or cancers due to chronic inflammation have a tangible economic and social impact. What further aggravates the situation is the fact that complex immunological disorders have surfaced where anti-infective treatments are not effective. Fortunately, due to breakthroughs in basic research that are being successfully translated into clinical practice, new treatment strategies are constantly evolving. In addition to the development of new therapeutic measures, however, it is also mandatory to review and periodically refine established treatment regimens.

to reflect current knowledge and ensure up to date medical care Combining outstanding basic research reviews with cutting edge treatment guidelines on inflammatory disorders of the GI tract this book presents newly identified treatment targets and provides clinicians and practitioners in the field with a most useful account of the state of the art **Hepatitis C Virus**

II Tatsuo Miyamura, Stanley M. Lemon, Christopher M.
