Handbook of eggs in human function Ronald Ross Watson, Fabien De Meester, 2023-08-07. Eggs have been used as a key part of the human diet for millennia. They contain a great variety of nutrients and material to sustain life and growth. The role of the egg as a natural source of vitamins, proteins, fats, and other nutrients continues to develop. Some nutrients have a controversy in benefits and risks. This controversy is the subject of several chapters in this book. Eggs have been used for decades by pharmaceutical companies as vehicles to grow viruses for vaccines. Currently, eggs are being developed to make antibodies for human use, so-called designer eggs. Eggs can also be used as a vehicle to transport vitamins and minerals to humans via nutrient-supplemented laying hens. These benefits are subject to commercial expansion, as well as being an active research area. This book, with summary points for each chapter, helps you to understand the role of eggs, including designer eggs, in general nutrition, health promotion, and disease. It is aimed at health scientists, nutritionists, dietitians, and food industry groups.

Personalized Nutrition Artemis P. Simopoulos, John A. Milner, 2010. Awareness of the influence of our genetic variation on dietary response, nutrigenetics, and how nutrients may affect gene expression, nutrigenomics, is prompting a revolution in the field of nutrition. Nutrigenetics and nutrigenomics provide powerful approaches to unravel the complex relationships among nutritional molecules, genetic variants, and the biological system. This publication contains selected papers from the 3rd Congress of the International Society of Nutrigenetics and Nutrigenomics, held in Bethesda, Md, in October 2009. The contributions address frontiers in nutrigenetics, nutrigenomics, epigenetics, transcriptomics, as well as non-coding RNAs and posttranslational gene regulations in various diseases and conditions. In addition to scientific studies, the challenges and opportunities facing governments, academia, and the industry are included. Everyone interested in the future of personalized medicine and nutrition or agriculture, as well as researchers in academia, government, and industry, will find this publication of the utmost interest for their work.
