Landscape Balance And Landscape Assessment:

Landscape Balance and Landscape Assessment Rudolf Krönert, 2001-06-11 The book's aim is to present recommendations for sustainable land use and management. The authors follow a hierarchical approach that is inherent in landscape structures and processes as well as in planning practice. During the last decades, landscape ecology has developed tremendously. Future research tendencies are also covered. All methodological approaches are explained with examples from different regions.

Landscape Balance and Landscape Assessment Rudolf Krönert, Uta Steinhardt, Martin Volk, 2013-03-09 During the last decades, landscape ecology has developed tremendously. It concerns both the theoretical basis and practical application. The authors follow a hierarchical approach that is inherent in landscape structures and processes as well as in planning practice. They show first approaches for the inclusion of factors of the landscape balance into planning procedures and new methods. GIS coupled modeling, remote sensing combined with more classical approaches from the basis of landscape assessment. Approaches for multicriterial landscape assessments are also presented. The overall target is to give recommendations for sustainable land use and management. Each chapter concludes with a synthesis of the theme under discussion. Ideas concerning the state of the art are integrated as well as future trends in research. All methodological approaches are explained with examples from differing regions.

Landscapes in the Eastern Mediterranean between the Future and the Past Ioannis N. Vogiatzakis, Theano S. Terkenli, Maria Gabriella Trovato, Nizar Abu-Jaber, 2020-05-15 Landscapes have long been viewed as multifunctional, integrating ecological, economic, sociocultural, historical, and aesthetic dimensions. Landscape science and public awareness in Europe have been progressing in leaps and bounds. The challenges involved in landscape-related issues and fields, however, are multiple and refer to landscape stewardship and protection as well as to the development of comprehensive theoretical and methodological approaches in tandem with public sensitization and participatory governance and in coordination with appropriate top-down planning and policy instruments. Landscape scale approaches are fundamental to the understanding of past and present cultural evolution and are now considered to be an appropriate spatial framework for the analysis of sustainability. Methods and tools of landscape analysis and intervention have also gone a long way since their early development in Europe and the United States. Although significant progress has been made, there remain many issues which are understudied or not investigated at all, at least in a Mediterranean context. This Special Issue addresses the application of landscape theory and practice in the Eastern Mediterranean and mainly, but not exclusively, reports on the outcomes of an

international conference held in Jordan in December 2015 with the title Landscapes of Eastern Mediterranean Challenges Opportunities Prospects and Accomplishments The focus of this Special Issue landscapes of the Eastern Mediterranean region thus constitutes a timely area of research interest not only because these landscapes have so far been understudied but also as a rich site of strikingly variegated long standing multicultural human environmental interactions These interactions resting on and taking shape through millennia of continuity in tradition have been striving to adapt to technological advances while currently juggling with manifold and multilayered socioeconomic and climate environmental crises
