Aortic Dissection Ying-Fu Chen,Chwan-Yau Luo,Dominique Shum-Tim,2015-07-02 Type A acute aortic dissection TAAAD is an acute cardiovascular condition that is normally associated with genetic conditions such as Marfan Syndrome but it can also occur in patients with no known predisposing risk factors TAAAD is associated with extremely high mortality over 20% of documented cases in medical literature if not addressed on time Surgical management of TAAAD also varies tremendously depending on the causative pathology Techniques to manage TAAAD cover the entire spectrum of methods employed in cardiac surgery ranging from a simple replacement of the ascending aorta to aortic root sparing or replacement and an aortocoronary bypass to total arch and descending aortic stenting involving hypothermic circulatory arrest or other cerebral protection strategies New medical evidence suggests that concomitant intraoperative management of the arch and descending aorta minimizes the need for subsequent surgeries in patients who are operated upon for TAAAD Coupled with

new diagnostic technology available to medical professionals better long term patient outcomes for TAAAD treatment are now a reality Recent Advances in Acute Type A Aortic Dissection presents a collection of comprehensive reviews from many experts on TAAAD Cardiac surgeons can benefit from this volume by learning about current medical opinions and consensus on risk factors including genetic predisposition diagnostic modalities intraoperative management surgical options cerebral protection strategies and long term follow up procedures on acute TAAAD *Braunwald's Heart Disease E-Book* Robert O. biomechanics and mechanobiology of aneurysmal diseases are not fully understood and this monograph aims to provide new insights into aneurysm aetiology and behavior based on the most recent biomechanics research related to this important topic. The contributors to this volume bring together a unique blend of expertise in experimental, computational and tissue biomechanics relating to aneurysm behavior and enable the reader to gain a fresh understanding of key factors influencing aneurysm behavior and treatment. Biological risk factors such as tobacco smoking, sex, age, hypertension, family history and mechanobiological risk factors such as aneurysm geometry and shape as well as mechanical properties of the diseased tissues are considered in detail as are many of the diagnostic and treatment options.

Emergency Radiology of the Abdomen Mariano Scaglione, Ulrich Linsenmaier, Gerd Schueller, 2012. Annotation: The term acute abdomen refers to a serious, often progressive clinical situation that calls for immediate diagnostic and therapeutic action. Today, diagnosis via imaging has basically replaced the physical examination in the emergency room and the Radiologist has become of primary importance in this setting. However, close co-operation among the various specialists involved is essential for successful patient management and thus the Radiologist needs to have a full understanding of the imaging modalities and technical skills required as well as appropriate clinical knowledge of the disorder in order to manage the condition. This book provides a comprehensive review of the multifaceted etiology, pathophysiology and clinical presentation of acute abdominal conditions focusing on the imaging features that are relevant to a timely management approach. Numerous high-quality images, diagrams and easy-to-read tables are provided.
