Quality Labs for Small Brewers Merritt Waldron,2020-08-03 Quality assurance and quality control QA QC is both a system and a state of mind In Quality Labs for Small Brewers author Merritt Waldron walks you step by step through the process of establishing and writing a quality program for your brewery Your quality policy should align with your company values and inculcate a quality first culture throughout your brewery Building an effective quality program will empower staff to directly influence the consistent production of safe quality beer from grain to glass A good quality program has many moving parts but it is underpinned by good manufacturing practice GMP and food safety requirements GMP covers every aspect of a brewery s operation not just how personnel comport themselves but how goods in are handled and stored how beer is held in the warehouse and how equipment plant and the grounds are maintained Learn how to set standards and critical control points and how to effectively monitor your process so that any deviation is quickly addressed Discover how policies procedures and specifications can help ensure quality throughout every process Involve your staff in establishing standard operating procedures corrective actions and improvements Learn how to effectively delegate responsibility and also ensure that management is armed with the information they need to ultimately make what may be some tough decisions If the worst happens understand that being able to make a tough call and having a robust recall procedure in place means you can move quickly to rectify matters which

helps your brewery retain the confidence of your customers and distributors. Brewers will see results through the application of GMP and food safety prerequisite programs. Your quality manual laying out standard operating procedures, product specifications and corrective action plans will give your staff the confidence to implement your quality program. With these programs in place, the author then takes you through each area of your brewery operation and breaks down how key parameters are measured and analyzed at critical control points. Sampling plans are outlined for monitoring density, temperature, pH, yeast viability and growth, alcohol carbonation, dissolved oxygen, titratable acidity, fill height and packaging integrity. Explore setting up an effective sensory panel, even a small one that will help ensure each beer remains true to brand. Waldron outlines building your brewery laboratory and looks at how to implement an in-house microbiology program. Throughout this, the focus is on scaling your efforts to the size of your operation and always being ready to expand your quality program as your brewery grows. The author makes it clear that no brewery is too small to implement QA/QC and discusses pragmatic solutions to building out your capabilities. Beyond taking meaningful, accurate measurements, the author also explores how to analyze data. Learn some basics of statistics and data organization and how to apply these techniques to continuously monitor processes and spot when corrective action is needed. These routines will help pinpoint any risks or areas of improvement and ensure that only quality beer reaches the customer, time after time.

Cleaning Validation Manual
Syed Imtiaz Haider, 2010-05-24

During the past decades, enormous progress and enhancement of pharmaceutical manufacturing equipment and its use have been made. And while there are support documents, books, articles and online resources available on the principles of cleaning and associated processing techniques, none of them provides a single database with convenient, ready-to-use training tools. Until now, *Cleaning Validation Manual: A Comprehensive Guide for the Pharmaceutical and Biotechnology Industries* elucidates how to train the manpower involved in development, manufacturing, auditing and validation of bio-pharmaceuticals on a pilot scale leading to scale-up production. With over 20 easy-to-use template protocols for cleaning validation of extensively used equipments, this book provides technical solutions to assist in fulfilling the training needs of finished pharmaceutical manufacturers. Drawing on the authors' more than two decades of experience in the pharmaceutical and biotech industries, the text offers hands-on training based on current approaches and techniques. The book does not merely provide guidelines or thought processes; rather, it gives ready-to-use formulas to develop Master Plan, SOPs and validation protocols. It includes cleaning procedures for the most commonly used equipment in various manufacturing areas and their sampling points using a pharmaceutical manufacturing site with both sterile and non-sterile operations as the case facility. It also provides the training guidelines on downloadable resources to enable users to amend or adopt them as necessary. Grounded in practicality, the book's applicability and accessibility set it apart. It can be used as a guide for implementing a cleaning validation program on-site without the help of external consultants, making it a resource that will not be found collecting dust on a shelf but rather referred to again and again.
