Madlands Anna Rose,2012 The co founder of the Australian Youth Climate Coalition recounts her journey around the world with arch climate skeptic Nick Minchin as they challenged each other s views and provoked each other to confront closely held assumptions

The Power of Narrative Raul P. Lejano,Shondel J. Nero,2020-09-18 There is an ideological war of words waging in America one that speaks to a new fundamentalism rising not just within the American public but across other ideologically torn nations around the globe as well At its heart is climate skepticism an ideological watershed that has become a core belief for millions of people despite a large scientific consensus supporting the science of anthropogenic climate change While many scholars have examined the role of lobbyists and conservative think tanks in fueling the climate skepticism movement there has not yet been a systematic analysis of why the narrative itself has resonated so powerfully with the public Pulling from science and technology studies narrative and discourse theory and public policy The Power of Narrative examines the strength of climate skepticism as a story offering a thoughtful analysis and comparison of anti climate science narratives over time and across geographic boundaries This book provides fresh insight into the rhetorical and semantic properties on both sides of the climate change debate that preclude dialogue around climate science and proposes a means for moving beyond ideological entrenchment through language mediation further ethnographic study and research informed teaching The Power of Narrative culminates in the revelation of a parallel between narratives about climate skepticism and those in other issue areas e g gun rights immigration health crises exposing a genetic meta narrative of public distrust and isolation Ultimately The Power of Narrative is not a book about climate change in itself it is instead a book about how our society understands and interacts with science how a social narrative becomes ideology and how we can move beyond personal and political dogma to arrive at a sense of collective rapprochement

A Hole in the Wind David Goodrich,2017-06-06 An epic bicycle journey across the American hinterland that explores the challenges of climate change alongside a diverse array of American voices After a distinguished career in climate science as the Director of the UN Global Climate Observing System in Geneva David Goodrich returned home to the United States to find a nation and a people in denial Concerned that the American people are willfully deluded by the misinformation about climate that dominates media and politics David thought a little straight talk could set things right As they say in Animal House he decided that this calls for a stupid and futile gesture on someone s part and I m just the guy to do it Starting on the beach in Delaware David rode his bike 4 200 miles to Oregon talking with the people he met on the ultimate road trip Along the way he learned a great deal about why climate is a complicated issue for many Americans and even more about the country we all share Climate change is the central environmental issue of our time But A Hole in the Wind is also about the people Dave met and the experiences he had along the way like the toddler s beauty pageant in Delaware the tornado in Missouri rust belt towns and their

relationship with fracking and the mined out uranium ghost town in Wyoming As he rides David will discuss the climate with audiences varying from laboratories to diners to elementary schools Beautifully simple direct and honest A Hole in the Wind is a fresh refreshing ride through a difficult and controversial topic and a rich read that makes you glad to be alive

Climate Charles Eisenstein, 2018-09-18 A stirring case for a wholesale reimagining of the framing tactics and goals we employ in our journey to heal from ecological destruction With research and insight Charles Eisenstein details how the quantification of the natural world leads to a lack of integration and our fight mentality With an entire chapter unpacking the climate change denier s point of view he advocates for expanding our exclusive focus on carbon emissions to see the broader picture beyond our short sighted and incomplete approach The rivers forests and creatures of the natural and material world are sacred and valuable in their own right not simply for carbon credits or preventing the extinction of one species versus another After all when you ask someone why they first became an environmentalist they re likely to point to the river they played in the ocean they visited the wild animals they observed or the trees they climbed when they were a kid This refocusing away from impending catastrophe and our inevitable doom cultivates meaningful emotional and psychological connections and provides real actionable steps to caring for the earth Freeing ourselves from a war mentality and seeing the bigger picture of how everything from prison reform to saving the whales can contribute to our planetary ecological health we resist reflexive postures of solution and blame and reach toward the deep place where commitment lives **Climate**

Change Scepticism Greg Garrard, Axel Goodbody, George B. Handley, Stephanie Posthumus, 2019-02-07 This book is available as open access through the Bloomsbury Open Access programme and is available on www.bloomsburycollections.com Climate Change Scepticism is the first ecocritical study to examine the cultures and rhetoric of climate scepticism in the UK Germany the USA and France Collaboratively written by leading scholars from Europe and North America the book considers climate skeptical texts as literature teasing out differences and challenging stereotypes as a way of overcoming partisan political paralysis on the most important cultural debate of our time **Leaving the Suburbs** John

Duke, 2021-10-18 In this adventure story the author rides a bicycle back home nearly 3 300 miles in order to witness firsthand how the landscape slowly changes across the vast and diverse North American continent It took two weeks to navigate across one continental watershed that had been entirely covered by a mile thick ice sheet a mere 20 000 years ago One massive glacier had lain right there on the path with if you were paying attention the telltale signs of the earthen scars the piles of rock left behind and the erratic boulder here and there It then took 7 000 years for Earth s temperature to slowly rise 9 degrees while that ice sheet retreated to the North Pole And it took us less than a generation to raise it another 2 degrees from the burning of mined fossil lightning speed compared to geological time This first person narrative briefly paints the climate story along the way the past present and future with over 60 references from scientific journals news reports interviews films videos university data and governmental agencies It attempts to answer two of the most important

questions of our time What does the path forward look like and who will lead us out of the most daunting environmental challenge humanity has ever faced Be surprised and enjoy the ride **Environmentalism Gone Mad** Alan

The Age of Consequences Courtney White,2015-01-01 Our planet is approaching a critical environmental juncture Across the globe we continue to deplete the five pools of carbon soil wood coal oil and natural gas at an unsustainable rate We ve burned up half the planet s known reserves of oil one trillion barrels in less than a century When these sources of energy rich carbon go into severe decline as they surely will society will follow Former archeologist and Sierra Club activist Courtney White calls this moment the Age of Consequences a time when the worrying consequences of our environmental actions or inaction have begun to raise unavoidable and difficult questions How should we respond What are effective and realistic solutions In exploring these questions White draws on his formidable experience as an environmentalist and activist as well as his experience as a father to two children living through this vital moment in time As a result *The Age of Consequences* is a book of ideas and action but it is also a chronicle of personal experience Readers follow White as he travels the country from Kansas to Los Angeles New York City Italy France Yellowstone and New England *The Skeptical Environmentalist*

Bjørn Lomborg, 2001 *The Skeptical Environmentalist* challenges widely held beliefs that the environmental situation is getting worse and worse. The author himself a former member of Greenpeace is critical of the way in which many environmental organisations make selective and misleading use of the scientific evidence. Using the best available statistical information from internationally recognised research institutes Bjørn Lomborg systematically examines a range of major environmental problems that feature prominently in headline news across the world. His arguments are presented in non technical accessible language and are carefully backed up by over 2500 footnotes allowing readers to check sources for themselves. Concluding that there are more reasons for optimism than pessimism Bjørn Lomborg stresses the need for clear headed prioritisation of resources to tackle real not imagined problems. *The Skeptical Environmentalist* offers readers a non partisan stocktaking exercise that serves as a useful corrective to the more alarmist accounts favoured by campaign groups and the media.

Environmental Skepticism Peter Jacques, 2009 *Environmental skepticism* describes the viewpoint that major environmental problems are either unreal or unimportant. This is the first book to analyze the importance of the anti environmental counter movement in world politics and its meaning for democratic and accountable deliberation as well as its importance as a mal adaptive project that hinders the world's people to rise to the challenges of sustainability.
