Mining and Community in South Africa Philippe Burger, Lochner Marais, Deirdre van Rooyen, 2017-09-22 Mining has played a key role in the growth of many towns in South Africa This growth has been accompanied by a proliferation of informal settlements by pressure to provide basic services and by institutional pressures in local government to support mining Fragile municipal finance changing social attributes the pressures of shift work on mineworkers the impact on the physical environment and perceived new inequalities between mineworkers contract workers and original inhabitants have further complicated matters Mining growth has however also led to substantial local economic benefits to existing business and it has contributed to a mushrooming of new enterprises While the relationship between mining and economic development at the country level has received adequate attention in existing literature less is known about the consequences of mining at the local level This book investigates the local impacts of mining in South Africa focusing on employment inequality housing business development worker well being governance municipal finance planning and the environment Taking an interdisciplinary approach Mining and Community in South Africa will be of interest to scholars of South Africa economic development labour and industry politics and planning

Sechser, Neil Narang, Caitlin Talmadge, 2021-11-28 Technology has always played a central role in international politics it shapes the ways states fight during wartime and compete during peacetime Today rapid advancements have contributed to a widespread sense that the world is again on the precipice of a new technological era Emerging technologies have inspired much speculative commentary but academic scholarship can improve the discussion with disciplined theory building and rigorous empirics This book aims to contribute to the debate by exploring the role of technology both military and non military in shaping international security Specifically the contributors to this edited volume aim to generate new theoretical insights into the relationship between technology and strategic stability test them with

sound empirical methods and derive their implications for the coming technological age This book is very novel in its approach It covers a wide range of technologies both old and new rather than emphasizing a single technology Furthermore this volume looks at how new technologies might affect the broader dynamics of the international system rather than limiting the focus to a stability The contributions to this volume walk readers through the likely effects of emerging technologies at each phase of the conflict process The chapters begin with competition in peacetime move to deterrence and coercion and then explore the dynamics of crises the outbreak of conflict and war escalation in an environment of emerging technologies The chapters in this book except for the Introduction and the Conclusion were originally published in the Journal of Strategic Studies *The London Journal, and Weekly Record of Literature, Science, and Art* ,1853 **The British cultivator and agricultural review** ,1844 The National Jury Verdict Review and Analysis ,2000
