

LATERAL THINKING

DEFINITION

The term lateral thinking refers to a problem-solving strategy that utilizes creative and indirect reasoning. We might colloquially call it "thinking outside the box."

Instead of relying on step-by-step analysis of the problem, the conventional method, lateral thinking often produces solutions that only seem obvious in hindsight.

EXPLANATION

Edward de Bono (1967) founded the concept. He explains:

"If you were to take a set of toy blocks and build them upwards, each block resting firmly and squarely on the block below it, you would have an illustration of vertical thinking. With lateral thinking the blocks are scattered around. They may be connected to each other loosely or not at all. But the pattern that may eventually emerge can be as useful as the vertical structure" (p. 11).
