*Global Burden and Challenges of Melioidosis* Direk Limmathurotsakul,David AB Dance,2019-03-26 This book is the definitive reference regarding the global status of melioidosis in 2018 Melioidosis is one of the most neglected tropical diseases NTDs so much so that it is not even included in the WHO list of NTDs Yet modeling suggests that it kills more people worldwide every year than diseases that are much better known such as leptospirosis and dengue The reasons for this under recognition are numerous including the fact that it

mainly affects the disadvantaged rural poor in areas that are poorly supplied with the diagnostic capability to make the diagnosis In 22 separate articles expert authors from around the world have summarized what is known about the burden of the disease in humans and animals and the presence of the causative bacterium in the environment in their countries or regions They have also identified the main obstacles and challenges to establishing the true burden and to ensure that patients receive accurate diagnosis and optimal care for this all too frequently fatal disease Rather than focusing on the theoretical risk of the use of *Burkholderia pseudomallei* as a biological weapon this book highlights its importance as a clear and present danger to global public health **Index Medicus** ,2004 Vols for 1963 include as pt 2 of the Jan issue Medical subject headings *Diversity of Coral-Associated Fauna* Simone Montano,2020-11-03 Coral reefs are acknowledged for the beauty of their organisms which has made this natural ecosystem one of the most appreciated on Earth It is believed to be the richest in terms of species diversity and species interactions at least in theory since there is yet much documentation work to be done Indeed the paradox is that of the estimated one million species living in this ecosystem globally only 10% of them have been described To date most of the coral reef studies have focused on the most peculiar and fabulous groups such as corals and fishes although most of the diversity is usually represented by small colored camouflaged hidden and crypto organisms from all kingdoms of life The mystery of their diversity ecology biology and importance in the functioning of coral reefs motivate many scientists to dive all around the world in order to discover name and appreciate such a fascinating but unfortunately overlooked component of nature This book is a very nice illustration of the charm of the coral associated fauna

Theresa Hitchler,1903 **Nanoelectronic Materials, Devices and Modeling** Qiliang Li,Hao Zhu,2019-07-15 As CMOS scaling is approaching the fundamental physical limits a wide range of new nanoelectronic materials and devices have been proposed and explored to extend and or replace the current electronic devices and circuits so as to maintain progress with respect to speed and integration density The major limitations including low carrier mobility degraded subthreshold slope and heat dissipation have become more challenging to address as the size of silicon based metal oxide semiconductor field effect transistors MOSFETs has decreased to nanometers while device integration density has increased This book aims to present technical approaches that address the need for new nanoelectronic materials and devices The focus is on new concepts and knowledge in nanoscience and nanotechnology for applications in logic memory sensors photonics and renewable energy This research on nanoelectronic materials and devices will be instructive in finding solutions to address the challenges of current electronics in switching speed power consumption and heat dissipation and will be of great interest to academic society and the industry High Resolution Active Optical Remote Sensing Observations of Aerosols, Clouds and Aerosol-Cloud Interactions and Their Implication to Climate Simone Lolli,Kai Qin,James Campbell,Sheng-Hsiang (Carlo) Wang,2020-12-03 Remote Sensing is of paramount importance for Earth Observation to monitor and analyze the Earth s vital signs In this Special Issue are reported the latest research results

involving active optical remote sensing instruments both from ground based to satellite platforms that are involved in analyzing the vertical and horizontal aerosol and cloud distribution other than their geometrical optical and microphysical properties Those active optical remote sensing techniques are also very useful in determining pollutant dispersion and the dynamics inside the boundary layer The published studies put in evidence the hidden mechanisms on how pollution from the source is advected transnationally in other countries and the interaction with local meteorology
