The material in this report originated in the National Center for Infectious Diseases, James M. Hughes, M.D., Director; and the Division of Healthcare Quality Promotion, Steven L. Solomon, M.D., Acting Director.

Summary

*The health-care facility environment is rarely implicated in disease transmission, except among patients who are immunocompromised. Nonetheless, inadvertent exposures to environmental pathogens (e.g., *Aspergillus* spp. and *Legionella* spp.) or airborne pathogens (e.g., *Mycobacterium tuberculosis* and varicella-zoster virus) can result in adverse patient outcomes and cause illness among health-care workers. Environmental infection-control strategies and engineering controls can effectively prevent these infections. The incidence of health-care-associated infections and pseudo-outbreaks can be minimized by 1) appropriate use of cleaners and disinfectants; 2) appropriate maintenance of medical equipment (e.g., automated endoscope reprocessors or hydrotherapy equipment); 3) adherence to water-quality standards for hemodialysis, and to ventilation standards for specialized care environments (e.g., airborne infection isolation rooms, protective environments, or operating rooms); and 4) prompt management of water intrusion into the facility. Routine environmental sampling is not usually advised, except for water quality determinations in hemodialysis settings and other situations where sampling is directed by epidemiologic principles, and results can be applied directly to infection-control decisions.*

This report reviews previous guidelines and strategies for preventing environment-associated infections in health-care facilities and offers recommendations. These include 1) evidence-based recommendations supported by studies; 2) requirements of federal agencies (e.g., Food and Drug Administration, U.S. Environmental Protection Agency, U.S. Department of Labor, Occupational Safety and Health Administration, and U.S. Department of Justice); 3) guidelines and standards from building and equipment

prevention from the perspective of all dental team members Easy to follow step by step procedures are provided for skills that dental team members must master each presented with a goal materials chronological steps and rationales for the performance of each step Review questions ensure your comprehension of the material and provide practice for classroom and board examinations Key terms begin each chapter and are highlighted within text discussions and defined in a back of book glossary Chapter learning objectives help you set goals for what you will accomplish and serve as checkpoints for comprehension and study tools in preparation for examinations NEW Content regarding COVID 19 examines its effects on infection control in the dental office including a new appendix outlining CDC guidance for dental settings NEW Updated coverage of the sterilization of dental handpieces is based on the April 2018 CDC update UPDATED Case scenarios represent the most current infection control practices for today s dental practice and help you apply what you ve learned to real world situations UPDATED Artwork throughout the text reflects the latest dental equipment and supplies Mayhall's Hospital Epidemiology and Infection Prevention David Weber, Tom Talbot, 2020-10-27 The fifth edition of Mayhall s Hospital Epidemiology and Infection Prevention has a new streamlined focus with new editors and contributors a new two color format and a new title Continuing the legacy of excellence established by Dr C Glen Mayhall this thoroughly revised text covers all aspects of healthcare associated infections and their prevention and remains the most comprehensive reference available in this complex field It examines every type of healthcare associated nosocomial infection and addresses every issue relating to surveillance prevention and control of these infections in patients and in healthcare personnel providing unparalleled coverage for hospital epidemiologists and infectious disease specialists **Morbidity and Mortality Weekly Report**, 2003 **Healthcare-Associated Infections in Children** J. Chase McNeil, Judith R. Campbell, Jonathan D. Crews, 2018-10-30 With advances in technology and medical science children with previously untreatable and often fatal conditions such as congenital heart disease extreme prematurity and pediatric malignancy are living longer While this is a tremendous achievement pediatric providers are now more commonly facing challenges in these medical complex children both as a consequence of their underlying disease and the delivery of medical care The term healthcare associated infections HAIs encompass both infections that occur in the hospital and those that occur as a consequence of healthcare exposure and medical complexity in the outpatient setting HAIs are associated with substantial morbidity and mortality for the individual patient as well as seriously taxing the healthcare system as a whole In studies from the early 2000s over 11% of all children in pediatric intensive care units develop HAIs and this figure increases substantially if neonatal intensive care units are considered While progress has been made in decreasing the rates of HAI in the hospital these infections remain a major burden on the medical system In a study published in 2013 the annual estimated costs of the five most common HAIs in the United States totaled 9.8 billion An estimated 648,000 patients developed HAIs in hospitals within the US in 2011 and children with healthcare associated bloodstream infection have a greater than three fold increased risk of death While a

number of texts discuss HAIs in the broader context of infectious diseases or pediatric infectious diseases such as Mandell's Principles and Practice of Infectious Diseases or Long and Pickering's Principles and Practice of Pediatric Infectious Diseases no single text specifically focuses on the epidemiology diagnosis and management of HAI in children Many infectious diseases texts are organized based on the microbiology of infection and from this starting point then discussing the clinical syndromes associated with the organism of interest For instance a chapter on Staphylococcus aureus may contain a brief discussion of the role of S aureus in surgical site infections in the wider context of all staphylococcal disease For clinicians caring for children at the bedside however the clinical syndrome is typically appreciated and intervention necessary prior to organism identification We propose a text that details both the general principles involved in HAIs and infection prevention but also provides a problem oriented approach Such a text would be of interest to intensivists neonatologists hospitalists oncologists infection preventionists and infectious diseases specialists The proposed text will be divided into three principle sections 1 Basic Principles of Infection Control and Prevention 2 Major Infectious Syndromes and 3 Infections in Vulnerable Hosts Chapters in the Major Infectious Syndromes section will include discussion of the epidemiology microbiology clinical features diagnosis medical management or surgical management as appropriate and prevention of the disease entity of interest Chapters will seek to be evidenced based as much as possible drawing from the published medical literature as well as from clinical practice guidelines such as those from the Infectious Diseases Society of America when applicable We intend to include tables figures and algorithms as appropriate to assist clinicians in the evaluation and management of these often complex patients Finally we intend to invite authors to participate in this project from across a number of medical specialties including infectious diseases infection control critical care oncology and surgery to provide a multidisciplinary understanding of disease It is our intent to have many chapters be co written by individuals in different subspecialties for instance a chapter on ventilator associated pneumonia may be co written by both infectious disease and critical care medicine specialists Such a unique text has the potential to provide important guidance for clinicians caring for these often fragile children
