Guinea Pig Zero An Anthology Of The Journal For Human Research Subjects:

Guinea Pig Zero Robert Helms, 2005-02-08 From first person accounts of pharmaceutical studies gone bad to intricate medical histories *Guinea Pig Zero* provides a fascinating look at the people who sell their bodies to science While the book provides advice to present day research subjects by rating research clinics the book also provides context by investigating the history and ethics behind this important but little known medical industry

Silent Partners Rebecca Dresser, 2017 The research ethics system was created without the help of people who know what it is like to be a research subject This is a serious omission Experts have overlooked ethical issues that matter to subjects *Silent Partners* moves subjects to the forefront giving them a voice in research ethics

Human Subjects Research Regulation I. Glenn Cohen, Holly Fernandez Lynch, 2014-07-11 The current framework for the regulation of human subjects research emerged largely in reaction to the horrors of Nazi human experiment revealed at the Nuremberg trials and the Tuskegee syphilis study conducted by US government researchers from 1932 to 1972 This framework combining elements of paternalism with efforts to preserve individual autonomy has remained fundamentally unchanged for decades Yet as this book documents it has significant flaws including its potential to burden important research overprotect some subjects and inadequately protect others generate inconsistent results and lag behind developments in how research is conducted Invigorated by the US government's first steps toward change in over twenty years *Human Subjects Research Regulation* brings together the leading thinkers this field from ethics law medicine and public policy to discuss how to make the system better The result is a collection of novel ideas some incremental some radical for the future of research oversight and human subject protection After reviewing the history of US research regulations the contributors consider such topics as risk based regulation research involving vulnerable populations including military personnel children and prisoners the relationships among subjects investigators sponsors and institutional review boards privacy especially regarding biospecimens and tissue banking and the possibility of fundamental paradigm shifts Book jacket

Human Medical Experimentation Frances R. Frankenburg MD, 2017-01-16 Intended for students and general readers alike this encyclopedia covers the history of human medical experimentation for better and worse from the time of Hippocrates to the present Thanks to medical experiments performed on human subjects we now have vaccines against smallpox rabies and polio Yet the advances that saved lives too often involved the exploitation of vulnerable populations Covering the history of human medical experimentation from the time of Hippocrates to today this work will introduce readers to the topic through a mixture of essays and ready reference materials The book covers the experiments themselves the people companies and government agencies that carried them out the relevant medical and sociopolitical background and the legislation and other protective measures that arose as a result The encyclopedia is divided chronologically into 6 periods pre 19th century the 19th century the pre World War II 20th century the World War II era the Cold War era and the post Cold War period to recent times Each period begins with an introductory essay and ends with a

bibliography Alphabetically arranged entries in each section cover pertinent people experiments and topics The volume is enriched throughout with a wealth of primary sources such as physicians descriptions of their experiments Medical experiments are not just a thing of the past and readers will also learn about questions and debates related to contemporary efforts to advance medical science

The Professional Guinea Pig Roberto Abadie, 2010-07-30 An ethnography focused on professional guinea pigs healthy paid research subjects who earn their living by participating in multiple Phase I clinical trials testing the safety of drugs in development

Handbook of the Psychology of Science Gregory Feist, Michael Gorman, 2012-12-14 Highly recommended Choice Current Reviews for Academic Libraries This handbook is the definitive resource for scholars and students interested in how research and theory within each of the major domains of psychology developmental cognitive personality and social have been applied to understand the nature of scientific thought and behavior Edited by two esteemed pioneers in the emerging discipline of the psychology of science it is the first empirically based compendium of its time The handbook provides a comprehensive examination of how scientific thinking is learned and evolves from infancy to adolescence and adulthood and combines developmental and cognitive approaches to show the categorical similarities and differences in thinking between children adolescents adults and scientists Chapters highlight the breadth and depth of psychological perspectives in the studies of science from creativity and genius gender and conflict and cooperation to postmodernism and psychobiography A section on applications offers findings and ideas that can be put to use by educators policymakers and science administrators Contributors examine the importance of mental models in solving difficult technical problems and the significance of leadership and organizational structure in successful innovation The final section of the book is devoted to the future of this new field focusing on how to continue to develop a healthy psychology of science

Key Features Presents the only empirically based compendium of current knowledge about the psychology of scientific thought and behavior Edited by two pioneers in the discipline of psychology of science Describes how scientific thinking is learned and changes throughout the life span Addresses creativity and genius gender conflict and cooperation postmodernism and psychobiography Covers applications of the psychology of science that can be used by educators policymakers and science administrators

Bodies Out of Control Matthew Weinstein, 2010 What is the cultural politics of science health and disease in the U S Bodies Out of Control explores this question through a series of case studies From its in depth examination of the discussions of sickle cell anemia schistosomiasis and cancer in middle school and high school textbooks to its analysis of the news coverage of the anthrax attacks of 2001 the book reveals the entanglements of science colonialism nationalism and identity The book also explores how the meaning of science itself is worked through in public discourses offering alternatively medical salvation confusion and a vision of a world without pleasure Finally to explore what agency and a critical practice of engaging science in classrooms and elsewhere might look like the book turns to the writings of politicized human research subjects which demonstrate a spectrum of possibilities for more democratic engagements with

science As a whole the book emphasizes the importance of engaging texts critically in science education and the ways that the cultural politics of science works through images of human and institutional bodies in and out of control Publisher's description *Chasing Medical Miracles* Alex O'Meara, 2010-06-03 Provides a behind the scenes look at clinical trials and how the companies involved with them have become significant part of the American medical establishment **Law and Ethics in Biomedical Research** Duff William Ramus Waring, Trudo Lemmens, 2006-01-01 When a young man named Jesse Gelsinger died in 1999 as a result of his participation in a gene transfer research study regulatory agencies in the United States began to take a closer look at what was happening in medical research The resulting temporary shutdown of some of the most prestigious academic research centres confirmed what various recent reports in the United States as well as Canada had claimed that the current system of regulatory oversight was in need of improvement Law and Ethics in Biomedical Research uses the Gelsinger case as a touchstone illustrating how three major aspects of that case the flaws in the regulatory system conflicts of interest and legal liability embody the major challenges in the current medical research environment Editors Trudo Lemmens and Duff R Waring along with a host of top scholars in the field demonstrate why existing models of research review and human subject protection are in need of improvement and how more stringent regulatory and legal means can be used to strengthen the protection of research subjects and the integrity of research The contributors also address conflicts of interest paying particular attention to the growing commercialization of medical research as well as the legal liability of scientific investigators research institutions and governmental agencies Legal liability is a growing concern in medical research and this fascinating study is in the international context one of the first to explore the liability of various parties involved in the research enterprise *Bad Pharma* Ben Goldacre, 2013-02-05 We like to imagine that medicine is based on evidence and the results of fair testing and clinical trials In reality those tests and trials are often profoundly flawed We like to imagine that doctors who write prescriptions for everything from antidepressants to cancer drugs to heart medication are familiar with the research literature about a drug when in reality much of the research is hidden from them by drug companies We like to imagine that doctors are impartially educated when in reality much of their education is funded by the pharmaceutical industry We like to imagine that regulators have some code of ethics and let only effective drugs onto the market when in reality they approve useless drugs with data on side effects casually withheld from doctors and patients All these problems have been shielded from public scrutiny because they're too complex to capture in a sound bite But Ben Goldacre shows that the true scale of this murderous disaster fully reveals itself only when the details are untangled He believes we should all be able to understand precisely how data manipulation works and how research misconduct in the medical industry affects us on a global scale With Goldacre's characteristic flair and a forensic attention to detail *Bad Pharma* reveals a shockingly broken system and calls for regulation This is the pharmaceutical industry as it has never been seen before **Principles of Health Care Ethics** Richard Edmund Ashcroft, Angus Dawson, Heather

Draper, John McMillan, 2015-08-12 Edited by four leading members of the new generation of medical and healthcare ethicists working in the UK respected worldwide for their work in medical ethics *Principles of Health Care Ethics* Second Edition is a standard resource for students professionals and academics wishing to understand current and future issues in healthcare ethics With a distinguished international panel of contributors working at the leading edge of academia this volume presents a comprehensive guide to the field with state of the art introductions to the wide range of topics in modern healthcare ethics from consent to human rights from utilitarianism to feminism from the doctor patient relationship to xenotransplantation This volume is the Second Edition of the highly successful work edited by Professor Raanan Gillon Emeritus Professor of Medical Ethics at Imperial College London and former editor of the *Journal of Medical Ethics* the leading journal in this field Developments from the First Edition include The focus on Four Principles Method is relaxed to cover more different methods in health care ethics More material on new medical technologies is included the coverage of issues on the doctor patient relationship is expanded and material on ethics and public health is brought together into a new section ...And It Was So

Dr. Scott Ransom, 2022-10-18 In *And it was So* Dr Scott Ransom argues that perceived gaps between science and the Biblical account of creation are symptoms of misinterpretation A proper understanding of the Hebrew language the audience for which Genesis was written the process of Biblical translation and the nature of science coalesce into a coherent picture of creation in which science and the Bible align Ransom takes the reader into the story of creation and the science behind it distilling complex scientific concepts into easily digestible nuggets and along the way introducing us to many of the lesser known heroes of scientific discovery In the end the reader will have a new appreciation for both science and the Bible as well as the harmony that exists between both White Coat, Black Hat

Carl Elliott, 2011-09-13 By New Yorker and Atlantic writer Carl Elliott a readable and even funny account of the serious business of medicine A tongue in cheek account of the changes that have transformed medicine into big business Physician and medical ethicist Carl Elliott tracks the new world of commercialized medicine from start to finish introducing the professional guinea pigs ghostwriters thought leaders drug reps public relations pros and even medical ethicists who use medicine for sometimes huge financial gain Along the way he uncovers the cost to patients lost in a health care universe centered around consumerism **Medical Proofs, Social Experiments**

Catherine Will, Tiago Moreira, 2016-04-22 Clinical trials have become key technologies for decision making in the contemporary world Their results shape medical practice and determine priorities across health care systems but the work that goes into producing credible data is often hidden *Medical Proofs Social Experiments* draws upon detailed case studies to argue that to understand their value we need to pay more attention to the contexts for these modern medical experiments recovering the diverse ways in which they involve doctors patients and the public the local practices that contribute to their completion and the complex negotiation of their results in professional and statutory institutions Presenting research from the UK USA Sweden and The Netherlands the ethnographic perspective adopted by the authors

provides a space to explore the investments of different state market professional and other actors in particular forms of evaluation and the ways in which trial methodologies may be re designed or re imagined to satisfy social and political expectations As such this volume will be of interest to those working in the fields of science and technology studies the sociology and anthropology of medicine and researchers of policy and organisation in health care **The New**

and Ecological Justice Matthew Weinstein,Chantal Pouliot,Isabel Martins,Ralph Levinson,Lyn Carter,Larry Bencze,Ajay Sharma,2023-08-25 This book consists of stories of struggles in science education presented by a network of science educators working in Australia Brazil Canada Britain and the United States The common goal of these educators is to produce more socially ecologically just models and practices of science education The book considers and reworks the key terms of current social justice agency realism justice and power Its first section explores re inhabiting science in the quest for more just worlds including reterritorializing science within emergent theories of critical realism engaging citizens activists with corporate science and challenging neoliberalism and the forces that organize structure knowledge The second section redefines praxis of science education itself through nuanced explorations of agency decolonialism and justice in ways that emphasize complexity hybridity ambivalence and contradiction The stories of this international group capture individual and collective efforts motivated by a persistent sense that science and science education matter for questions of justice

Altering Nature B. A. Lustig, B.A. Brody, Gerald P. McKenny, 2008-11-01 B Andrew Lustig Baruch A Brody and Gerald P McKenny In this second volume of the Altering Nature project we situate specific religious and policy discussions of four broad areas of biotechnology within the context of our interdisciplinary research on concepts of nature and the natural in the first volume *Altering Nature Concepts of Nature and the Natural in Biotechnology Debates* In the first volume we invited five groups of scholars to explore the diverse conceptions of nature and the natural that shape moral judgments about human alterations of nature as especially exemplified by recent developments in biotechnology A careful reading of such developments reveals that assessments of them whether positive or negative are often informed by different conceptual interpretations of nature and the natural with differing implications for judgments about the appropriateness of particular alterations of nature These varying interpretations of nature and the natural often result from the distinctive perspectives that characterize various scholarly disciplines Therefore in an effort to explore the variety of meanings that attend discussions of the concepts of nature and the natural the contributors to the first volume of *Altering Nature* addressed those concepts from five different disciplinary vantages A first group of scholars analyzed a range of religious and spiritual perspectives on concepts of nature and the natural Their research highlighted the thematic historical and methodological touchstones in those traditions that shape their perspectives on nature

Altruism Matthieu Ricard, 2015-06-02 The author of the international bestseller *Happiness* makes a passionate case for altruism and why we need it now more than ever In *Happiness* Matthieu Ricard demonstrated that true happiness is not tied to fleeting moments or sensations but is an enduring state of soul rooted in mindfulness and compassion for others Now he turns his lens from the personal to the global with a rousing argument that altruism genuine concern for the well being of others could be the saving grace of the 21st century It is he believes the vital thread that can answer the main challenges of our time the economy in the short term life satisfaction in the mid term and environment in the long term Ricard's message has been taken up by major economists and thinkers including Dennis Snower Amartya Sen Joseph Stiglitz and George Soros Matthieu Ricard makes a robust and passionate case for cultivating altruistic love and compassion as the best means for simultaneously benefitting ourselves and our society It's a fresh outlook on an ardent struggle and one that just might make the world a better place
