Habitability And Cosmic Catastrophes

Habitability and Cosmic Catastrophes Arnold Hanslmeier, 2008-11-14 The search for life in the universe is one of the most challenging topics of science. It is not a modern topic at all, since more than 100 years ago it was speculated that on the Moon there are oceans and seas, on Venus there are swamps, and also Mars is inhabited. However, now we have the scientific background and the scientific tools to answer this question, and it is also certain that the answer would have deep implications for our culture, philosophy, and religions. If we find that life has developed on other planets or satellites of giant planets, then this would be the final breakdown of our central position in the universe. But is life a widespread phenomenon? How vulnerable is it to changing conditions and even catastrophic events? These topics will be discussed in this book. If life is in the extreme case a unique phenomenon found only on planet Earth, which seems to be highly unrealistic, then also it is important to discuss how it is adaptable to changing external conditions. Can we survive a cosmic catastrophe? How do these catastrophes change habitability? Which forms of life are more vulnerable? It was mentioned that now science has made great progress to answer such questions. Let us give some examples. In modern biology, in connection with organic chemistry, the origin of life is studied.

Life on Earth and other Planetary Bodies Arnold Hanslmeier, Stephan Kempe, Joseph Seckbach, 2012-10-29 A trio of editors, Professors from Austria, Germany, and Israel, present *Life on Earth and other Planetary Bodies*. The contributors are from twenty various countries and present their research on life here as well as the possibility for extraterrestrial life. This volume covers concepts such as life's origin, hypothesis of Panspermia, and of life possibility in the Cosmos. The topic of extraterrestrial life is currently hot and the object of several congresses and conferences. While the diversity of normal biota is well known, life on the edge of the extremophiles is more limited and less distributed. Other subjects discussed are Astrobiology with the frozen worlds of Mars, Europa, and Titan, where extant or extinct microbial life may exist in subsurface oceans; conditions on icy Mars with its saline, alkaline, and liquid water, which has been recently discovered; chances of habitable Earth-like or the terrestrial analogues, exoplanets, and SETI's search for extraterrestrial Intelligence.

Cosmic Catastrophes Clark R. Chapman, David Morrison, 2013-12-01 The authors discuss such topics as impacts with asteroids, the greenhouse effect, nuclear winter, fringe catastrophism, supernovae, and an assessment of risks. *New Scientist*.

The Sun We Share Kristine Larsen, 2024-11-21 As the dominant star in our sky, the Sun has been alternately worshipped as a god and viewed as a threat over the course of human history. Despite significant advances in astronomy, the Sun continues to surprise us, most notably in its production of so-called space weather that impacts technology here on Earth. This unique mixture of familiarity and mystery has made the Sun a main character in popular media over the past three centuries. This book examines how popular media have adapted to our ever-changing understanding of the inner workings of the Sun. It provides a valuable way to observe the inherent problems of communicating science to a non-technical audience. Chapters cut through the widespread hype found on the Internet and instead explore our ever-improving scientific exploration of the Sun, the

persistent misconceptions surrounding it the fate of the Sun and its relation to the fate of the Earth and why despite comments to the contrary by Oscar Wilde the average person should care about sunspots

The Earth as a Distant Planet M. Vázquez,E. Pallé,P. Montañés Rodríguez,2010-03-12 In The Earth as a Distant Planet the authors become external observers of our solar system from a distance and try to determine how one can understand how Earth the third in distance to the central star is essentially unique and capable of sustaining life The knowledge gained from this original perspective is then applied to the search for other planets outside the solar system or exoplanets Since the discovery in 1992 of the first exoplanet the number of planet detections has increased exponentially and ambitious missions are already being planned for the future The exploration of Earth and the rest of the rocky planets are Rosetta stones in classifying and understanding the multiplicity of planetary systems that exist in our galaxy In time statistics on the formation and evolution of exoplanets will be available and will provide vital information for solving some of the unanswered questions about the formation as well as evolution of our own world and solar system Special attention is paid to the biosignatures signs of life detectable in the Earth's reflected spectra and the search for life in the universe The authors are experts on the subject of extrasolar planets They provide an introductory but also very much up to date text making this book suitable for researchers and for advanced students in astronomy and astrophysics

Water in the Universe Arnold Hanslmeier,2010-09-29 Due to its specific chemical and physical properties water is essential for life on Earth And it is assumed that this would be the case for extraterrestrial life as well Therefore it is important to investigate where water can be found in the Universe Although there are places that are completely dry places where the last rainfall happened probably several 100 million years ago surprisingly this substance is quite omnipresent In the outer solar system the large satellites of Jupiter and Saturn are covered by a thick layer of ice that could be hiding a liquid ocean below This of course brings up the question of whether the recently detected extrasolar planets could have some water on their surfaces and how we can detect this Water molecules are also found in interstellar gas and dust clouds This book begins with an introductory chapter reviewing the physical and chemical properties of water Then it illuminates the apparent connection between water and life This is followed by chapters dealing with our current knowledge of water in the solar system followed by a discussion concerning the potential presence and possible detection of water on exoplanets The signature of water in interstellar space and stars are reviewed before the origin of water in the Universe is finally discussed The book ends with an appendix on detection methods satellite missions and astrophysical concepts touched upon in the main parts of the book The search for water in the Universe is related to the search for extraterrestrial life and is of fundamental importance for astrophysics astrobiology and other related topics This book therefore addresses students and researchers in these fields

Encyclopedia of Astrobiology Muriel Gargaud,Ricardo Amils,2011-05-26 Astrobiology is a remarkably interdisciplinary field This reference serves as a key to understanding technical terms from the different subfields of astrobiology including astronomy biology chemistry the geosciences and the

Ćirković,2018-05-03 The Great Silence explores the multifaceted problem named after the great Italian physicist Enrico Fermi and his legendary 1950 lunchtime question Where is everybody In many respects Fermi s paradox is the richest and the most challenging problem for the entire field of astrobiology and the Search for ExtraTerrestrial Intelligence SETI studies

This book shows how Fermi's paradox is intricately connected with many fields of learning technology arts and even everyday life. It aims to establish the strongest possible version of the problem to dispel many related confusions, obfuscations and prejudices as well as to offer a novel point of entry to the many solutions proposed in existing literature. Milan Cirkovic argues that any evolutionary worldview cannot avoid resolving the Great Silence problem in one guise or another.

Cosmic Catastrophes Gerrit L. Verschuur, 1978. A meteorite destroying Los Angeles. Another ice age. A star explosion. Impossible not so according to astronomer Gerrit Verschuur who combines science fiction and science fact in this remarkable new book. Cosmic Catastrophes predicts disasters on the largest possible scale: catastrophes that could destroy our entire planet. They could happen in a billion years or a thousand in a decade or tomorrow. A nearby star explodes, a large meteorite strikes the earth, the temperature drops 100 to produce an ice age, the magnetic field drops to zero, a black hole orbiting the sun churns the earth's oceans into huge tidal waves. Dr Verschuur points out that we are an integral part of the universe, not just observers, and that cosmic events can and will affect our lives. He uses science fiction to explore some of the more chilling possibilities, then presents the science facts behind each of the potential disasters. Cosmic Catastrophes, a fascinating book for armchair astronomers and science fiction buffs alike. Pg 4 of cover.

Apocalypse Cinema Stephen Prince, 2021-07-16. Vivid images of the apocalypse proliferate throughout contemporary cinema, which pictures the death of civilization in wildly different ways. Some films imagine a future where humanity is wiped out entirely, while others envision humans as an endangered species enslaved by alien invaders or hunted by zombie hordes. This book provides a lively overview of apocalypse cinema, including alien invasions, nuclear annihilation, asteroid collisions, climate change, and terrifying plagues. Covering pivotal films from the silent era to the present day, including *Metropolis*, *Invasion of the Body Snatchers*, *Dr Strangelove*, *Contagion*, and *Avengers: Endgame*, Stephen Prince explores how these dark visions are rooted in religious and prophetic traditions, and he considers how our love for apocalypse cinema is tied to fundamental existential questions and anxieties that never go out of fashion.
