manual is designed for the use of geo scientists with an interest and need in developing palaeobiological materials as a
potential source of data To meet this objective practical procedures have been formatted for use by both professional and
semi professional students with an initial understanding of palaeo biological research aims as a primary source of scientific
data I have attempted to provide an explanation and understanding of practical procedures which may be required by
students undertaking palaeobiological projects as part of a degree course The layout of this manual should be particularly
beneficial in the instruction and training of geotechnologists and museum preparators Graduate students and scientists
requiring an outline of a preparation procedure will also be able to use the manual as a reference from which to assess the
suitability of a procedure This manual is also intended for use by the committed amateur Many of the techniques described in
this manual have been devised by non palaeontologists and developed from methods used in archaeology zoology and botany
as well as other areas of geology A considerable number of the methods can be undertaken by the amateur and in the case of
many of the field procedures should be used This will ensure that specimens and samples can be conserved in such a manner
as to facilitate any later research and not invalidate the results of subsequent geochemical analytical techniques which might
