Mapping the Nation Susan Schulten, 2020-03-04 A compelling read that reveals how maps became informational tools charting everything from epidemics to slavery Journal of American History In the nineteenth century Americans began to use maps in radically new ways For the first time medical men mapped diseases to understand and prevent epidemics natural scientists mapped climate and rainfall to uncover weather patterns educators mapped the past to foster national loyalty among students and Northerners mapped slavery to assess the power of the South After the Civil War federal agencies embraced statistical and thematic mapping in order to profile the ethnic racial economic moral and physical attributes of a reunified nation By the end of the century Congress had authorized a national archive of maps an explicit recognition that old maps were not relics to be discarded but unique records of the nation's past All of these experiments involved the realization that maps were not just illustrations of data but visual tools that were uniquely equipped to convey complex ideas and information In Mapping the Nation Susan Schulten charts how maps of epidemic disease slavery census statistics the environment and the past demonstrated the analytical potential of cartography and in the process transformed the very meaning of a map Today statistical and thematic maps are so ubiquitous that we take for granted that data will be arranged cartographically Whether for urban planning public health marketing or political strategy maps have become everyday tools of social organization governance and economics The world we inhabit saturated with maps and graphic information grew out of this sea change in spatial thought and representation in the nineteenth century when Americans learned to see themselves and their nation in new dimensions
