

VISUALLY INSPECTING THE BOAT AND MOTOR

• See Figures 6 and 7

Both before each launch and immediately after each retrieval, visually inspect the boat and motor as follows:

1. **Check the fuel and oil levels** according to the procedures in this manual. Do NOT launch a boat without properly topped off fuel and (if applicable) oil tanks. It is not worth the risk of getting stranded or of damage to the motor. Likewise, upon retrieval, check the oil and fuel levels while it is still fresh in your mind. This is a good way to track fuel consumption (one indication of engine performance). For oil injected 2-stroke motors, compare the fuel consumption to the oil consumption (a dramatic change in proportional use may be an early sign of trouble).
2. **Check for signs of fuel or oil leakage.** Probably as important as making sure enough fuel and oil is onboard, is the need to make sure that no dangerous conditions might arise due to leaks. Thoroughly check all hoses, fittings and tanks for signs of leakage. Oil leaks may cause the boat to become stranded, or worse, could destroy the motor if undetected for a significant amount of time. Fuel leaks can cause a fire hazard, or worse, an explosive condition. This check is not only about properly maintaining your boat and motor, but about helping to protect your life.

• CAUTION

On fuel injected motors (ESPECIALLY EPI or Optimax) fuel is pumped at high pressure through various lines under the motor cow. The smallest leak will allow for fuel to spray in a fine, atomized and highly combustible stream from the damaged hose/fitting. It is critical that you remove the cowling and turn the key to the ON position (to energize the fuel pump and begin building system pressure) for a quick check before starting the motor (to ensure that no leaks are present). Even so, leaks may not show until the motor is operating so it is a good idea to either leave the cover off until the motor is running or to remove it again later in the day to double-check that you are leak free. Of course, if you DO remove the cover with the engine running take GREAT care to prevent contact with any moving parts.

3. **Inspect the boat hull and engine cases** for signs of corrosion or damage. Don't launch a damaged boat or motor. And don't surprise yourself dockside or at the launch ramp by discovering damage that went unnoticed last time the boat was retrieved. Repair any hull or case damage now.

4. **Check the battery connections** to make sure they are clean and tight. A loose or corroded connection will cause charging problems (damaging the system or preventing charging). There's only one thing worse than a dead battery dockside/launch ramp and that's a dead battery in the
