closing data files reading records breaking the records up into fields and counting the records While awk provides the features of most conventional programming languages it also includes some unconventional features such as extended regular expression matching and associative arrays sed awk describes both programs in detail and includes a chapter of example sed and awk scripts This edition covers features of sed and awk that are mandated by the POSIX standard This most notably affects awk where POSIX standardized a new variable CONVFMT and new functions toupper and tolower The CONVFMT variable specifies the conversion format to use when converting numbers to strings awk used to use OFMT for this purpose The toupper and tolower functions each take a presumably mixed case string argument and return a new version of the string with all letters translated to the corresponding case In addition this edition covers GNU sed newly available since the first edition It also updates the first edition coverage of Bell Labs nawk and GNU awk gawk covers mawk an additional freely available implementation of awk and briefly discusses three commercial versions of awk MKS awk Thompson Automation awk tawk and Videosoft VSAwk     *Extending MFC Applications with the .NET Framework* Tom Archer,Nishant Sivakumar,2003 Filled with practical examples that show how to incorporate NET functionality into legacy applications in order to make them more productive Demonstrates clearly how various NET classes provide either a new ability not found in MFC or a markedly improved way of doing something Explains how developers can start to use NET today without abandoning their current skill set     *Research in Reading Readiness* Doris Virginia Gunderson,1964
