

MATERIAL SCIENCE AND METALLURGICAL PROCESSES

7.1 Introduction of the Unit of Learning /Unit of Competency

Material science is the investigation of the relationship among processing, structure, properties, and performance of materials. This unit prepares the trainee to be able to select a material for a given use based on considerations of cost and performance, understand the limits of materials and the change of their properties with use, and create a new material that will have some desirable properties. This branch of science encompasses: determining the structure, measuring the properties of materials, devising suitable ways of processing them i.e. creating materials, transforming existing materials and making useful things out of them, thus materials scientists think about how a material is suited to the purpose it serves already and how it may be enhanced to give better performance for particular applications.

All engineers are involved with materials on a daily basis: They manufacture, process materials, design and construct component or structures using materials, analyze failures in materials. This unit is meant to create awareness to trainees on the types of materials available, to understand their general behavior and capability and to recognize the effects of the environment and service condition and the material performance

7.2 Performance Standard

Test and analyze properties of engineering materials as per material testing method and operation standards procedures. Tabulate, calculate and interpret material testing results, maintain testing machines while observe safety procedures according to OSHA.

Osif, 2011-08-09. With the encroachment of the Internet into nearly all aspects of work and life it seems as though information is everywhere. However there is information and then there is correct appropriate and timely information. While we might love being able to turn to Wikipedia for encyclopedia like information or search Google for the thousands of links on a topic engineers need the best information information that is evaluated up to date and complete. Accurate vetted information is necessary when building new skyscrapers or developing new prosthetics for returning military veterans. While the award winning first edition of *Using the Engineering Literature* used a roadmap analogy we now need a three dimensional analysis reflecting the complex and dynamic nature of research in the information age. *Using the Engineering Literature Second Edition* provides a guide to the wide range of resources available in all fields of engineering. This second edition has been thoroughly revised and features new sections on nanotechnology as well as green engineering. The information age has greatly impacted the way engineers find information. Engineers have an effect directly and indirectly on almost all aspects of our lives and it is vital that they find the right information at the right time to create better products and processes. Comprehensive and up to date with expert chapter authors this book fills a gap in the literature providing critical information in a user friendly format. **Steel Heat Treatment Handbook - 2 Volume Set** George E. Totten, 2006-11-14. This reference presents the classical perspectives that form the basis of heat treatment processes while incorporating descriptions of the latest advances to impact this enduring technology. The second edition of the bestselling *Steel Heat Treatment Handbook* now offers abundantly updated and extended coverage in two self contained volumes. *Handbook of Metallonutraceuticals* Yashwant Vishnupant Pathak, Jayant N. Lokhande, 2014-04-28. The nutritional and medicinal value of metals such as zinc calcium and iron has been known in traditional medicine for a long time. Other metals such as silver and gold may also have therapeutic and health benefits. Ancient medicines have long incorporated their use in the treatment of diseases and they have also more recently been explored. **DeGarmo's Materials and Processes in Manufacturing** Ernest Paul DeGarmo, J. T. Black, Ronald A. Kohser, 2011-08-30. Now in its eleventh edition *DeGarmo's Materials and Processes in Manufacturing* has been a market

leading text on manufacturing and manufacturing processes courses for more than fifty years Authors J T Black and Ron Kohser have continued this book s long and distinguished tradition of exceedingly clear presentation and highly practical approach to materials and processes presenting mathematical models and analytical equations only when they enhance the basic understanding of the material Completely revised and updated to reflect all current practices standards and materials the eleventh edition has new coverage of additive manufacturing lean engineering and processes related to ceramics polymers and plastics
