Materials Science in Static High Magnetic Fields Watanabe Kyoko, M. Motokawa, 2012-12-06 Presents the most comprehensive review of the influence of highly intense magnetic fields on materials of various classes *Frontiers in Materials Research* Yasunori Fujikawa, Kazuo Nakajima, Toshio Sakurai, 2008-07-02 New advanced materials are being rapidly developed thanks to the progress of science These are making our daily life more convenient The Institute for Materials Research IMR at Tohoku University has greatly contributed for to the creation and development of various advanced materials and the progress in the eld of material science for almost a century For example our early research achievements on the physical metallurgy of iron carbon alloys led to the innovation of technology for making high quality steels which has greatly contributed to the advancement of the steel and related industry in Japan and rest of the world IMR has focused on basic research that can be translated into applications in the future for the bene t of mankind With this tradition we have established the rst high magnetic eld as well as low temperature technologies in Japan which were essential to the vancement of magnetism and superconductivity Recently IMR has expanded its research in the eld of advanced materials including metallic glasses ramics nano structural metals semiconductors solar cell crystals new op andspin electronicsmaterials organicmaterials hydrogenstoragealloys and shaped crystals

Inthefaceofthecrisisofthedestructionoftheglobalenvironment the pletion of world wide natural resources and the exhaustion of energy sources in the twenty rst century we all have an acute serious desire for a b ter safer world in the future IMR has been and will continue the pursuit of research aimed at solving global problems and furthering eco friendly dev opment

High-Temperature Measurements of Materials Hiroyuki Fukuyama, Yoshio Waseda, 2008-12-28 A variety of industries information technology aerospace automobile and basic and new materials manufacturing need technological innovations which bring high value added and high quality products at low cost not only because of global competition but also because of the perspective of en ronmental consciousness and regulation Thermophysical properties of hi temperature melts are indispensable for numerical simulations of material processes such as semiconductor and optical crystal growth of the melt and castingofsuper high temperaturealloysforjet engine turbineblades inad tion to welding in automobile manufacturing Recent developments in process modeling provide 3D unsteady analysis of melt convection temperature and heat ux distribution which enables us to predict product quality In fact 3D process visualization using computer modeling helps us to understand complicated phenomena occurring in the melt and to control the process Accurate data are necessary to improve the modeling which co e ectively engenders high quality products However crucial obstacles render measurements of thermophysical properties di cult at elevated temperatures because of high chemical reactivity and uidity of melts Substantial and persistent challenges have been made to ascertain the precise thermophysical properties of high temperature melts This book describes the new techniques and latest developments in the measurements of atomic structure

density surface tension viscosity heat capacity thermal and mass diffusivity thermal conductivity emissivity and electrical conductivity of high temperature melts In addition to up to date improvements in conventional techniques some new attempts are introduced to open a new scientific field that is physics of high temperature melts

Characterization of Corrosion Products on Steel Surfaces Yoshio Waseda, Shigeru Suzuki, 2006-10-06 This book describes the fundamental aspects of materials characterization for the ferric oxyhydroxides formed on steel surfaces Selected examples from both the basic science and the applied engineering points of view are presented Of special interest is the new structural information on ferric oxyhydroxides containing a small amount of alloying elements The text relates this to their various states and their role in corrosion processes

Oxide and Nitride Semiconductors Takafumi Yao, Soon-Ku Hong, 2009-03-20 This is a unique book devoted to the important class of both oxide and nitride semiconductors It covers processing properties and applications of ZnO and GaN The aim of this book is to provide the fundamental and technological issues for both ZnO and GaN

Fiber Crystal Growth from the Melt Tsuguo Fukuda, Peter Rudolph, Satoshi Uda, 2013-03-09 Fiber Crystal Growth from the Melt reviews the growth modelling characterization and application of single crystal fibers are reviewed Due to their very large length to diameter ratio together with perfect crystallographic structure and chemical homogeneity such fibers have mechanical and physical properties that approach the theoretical values Fukuda explains how their ultra high strength enables their application as reinforcing agents in structural components And he elucidates how and why fiber crystals are particularly well suited for wave guiding tunable narrow band filters and nonlinear optics and for the generation of green blue and violet wavelengths and also as micro lasers and laser modulators The book is suitable for specialists and students in the fields of materials science crystal growth physics chemistry crystallography optics mechanics and engineering
